## **K C Precision Engineering Limited**

### **Notes to the abbreviated financial statements for the year ended 31 December 2006**

#### **1. Accounting policies**

##### **1.1. Accounting convention**

The accounts are prepared under the historical cost convention and in accordance with applicable accounting standards, and in accordance with the Financial Reporting Standard for Smaller Entities (effective January 2005)

##### **1.2. Turnover**

Turnover represents the total invoice value, excluding value added tax, of sales made during the year and derives from the provision of goods falling within the company's ordinary activities

##### **1.3. Tangible fixed assets and depreciation**

Depreciation is provided at rates calculated to write off the cost less residual value of each asset over its expected useful life, as follows

Plant and machinery	-	20% straight line basis
Fixtures, fittings and equipment	-	20% reducing balance basis
Motor vehicles	-	25% reducing balance basis

##### **1.4. Leasing**

Rentals payable under operating leases are charged against income on a straight line basis over the lease term

##### **1.5. Stock and work in progress**

Stock and work in progress are valued at the lower of cost and net realisable value

##### **1.6. Pensions**

The pension costs charged in the financial statements represent the contribution payable by the company during the year

##### **1.7. Deferred taxation**

The charge for taxation takes into account taxation deferred as a result of timing differences between the treatment of certain items for taxation and accounting purposes. In general, deferred taxation is recognised in respect of all timing differences that have originated but not reversed at the balance sheet date. However, deferred tax assets are recognised only to the extent that the directors consider that it is more likely than not that they will be recovered against the reversal of deferred tax liabilities or other future taxable profits. Deferred taxation is measured on a non-discounted basis at the average tax rates that would apply when the timing differences are expected to reverse, based on tax rates and laws that have been enacted by the balance sheet date.
