PSM Cards are built using a PSM Tag and a PSM Register. The PSM Register is a 40-bit binary value. The PSM Tag is a 16-bit binary value. The PSM Register is divided into four 10-bit fields. The PSM Tag is divided into four 4-bit fields. The PSM Register fields are: PSM Register Field 1 (bits 31-22), PSM Register Field 2 (bits 21-12), PSM Register Field 3 (bits 11-2), and PSM Register Field 4 (bits 1-0). The PSM Tag fields are: PSM Tag Field 1 (bits 15-12), PSM Tag Field 2 (bits 11-8), PSM Tag Field 3 (bits 7-4), and PSM Tag Field 4 (bits 3-0). The PSM Register Field 1 is used to store the PSM Register value. The PSM Register Field 2 is used to store the PSM Register value. The PSM Register Field 3 is used to store the PSM Register value. The PSM Register Field 4 is used to store the PSM Register value. The PSM Tag Field 1 is used to store the PSM Tag value. The PSM Tag Field 2 is used to store the PSM Tag value. The PSM Tag Field 3 is used to store the PSM Tag value. The PSM Tag Field 4 is used to store the PSM Tag value.
