NOTES

These notes are for the purpose of recording the results of the work done in the laboratory of the Department of Chemistry, University of Toronto, during the summer of 1954.

1. INTRODUCTION

The purpose of this work was to determine the effect of the concentration of the reactants on the rate of the reaction.

2. EXPERIMENTAL

The reaction was carried out in a 250 ml. Erlenmeyer flask, which was fitted with a magnetic stirrer and a thermometer. The reactants were weighed out and added to the flask, and the reaction was started by the addition of a catalyst.

The time taken for the reaction to complete was measured by the appearance of a precipitate.

3. RESULTS AND DISCUSSION

The results of the experiment are given in the following table:

Concentration of Reactants

Time taken for reaction to complete

0.1 M 0.1 M 0.1 M 0.1 M 0.1 M
