For investments in subsidiaries acquired for consideration including the issue of shares qualifying for merger relief, cost is measured by reference to the nominal value only of the shares issued Any premium is ignored

For investments in subsidiaries acquired for consideration including the issue of shares qualifying for group reconstruction relief, cost is measured by reference to the net asset value of the shares issued, and the premium is accounted for accordingly. Deferred tax is measured on a non-discounted basis at the tax rates that are expected to apply in the years in which the timing differences reverse, based on the tax rates enacted at the balance sheet date.
