Gulf International Bank

Headquartered in the Kingdom of Bahrain, and with branch offices in London and New York, Gulf International Bank (GIB) provides clients with a vital investment and business conduit between the region and the rest of the world.

Working in partnership with its clients, the Bank delivers innovative bespoke financial solutions for corporate and global transaction banking; debt and equity capital market-related transactions; plus financial advisory, asset management and treasury. GIB also pioneered the introduction of digital retail banking in the MENA region through the launch of meem in Kingdom of Saudi Arabia and Kingdom of Bahrain. Supported by a cutting-edge digital ecosystem and an experienced team of over 1,000 staff, the Bank operates in strict accordance to the highest global standards of ethical and professional conduct.

Commencing operations in 1976, GIB is licensed by the Central Bank of Bahrain as a conventional wholesale bank. It is owned by the governments of the six Gulf Cooperation Council (GCC) States, with the Kingdom of Saudi Arabia holding a majority stake.

The Bank's principal subsidiaries are GIB (UK) Limited in London and GIB Capital in Riyadh, Kingdom of Saudi Arabia. It has international branches in London and New York; and regional branches in Riyadh, Jeddah, Dhahran and Abu Dhabi, together with a representative office in Dubai. Marking an important milestone in its strategy to become a pan-GCC universal bank, GIB is currently in the final stages of converting its branches in Kingdom of Saudi Arabia into a locally-incorporated bank.

Chairman's statement

On behalf of the Board of Directors. it is my privilege to present the annual report and consolidated financial statements of Gulf International Bank (GIB) for the fiscal year ended 31st December 2018. While the continuation of economic uncertainty and market volatility had been expected. there were also a number of unexpected global events which posed new challenges for the GCC region. Accordingly, GIB adopted a proactive approach to navigating the risks arising from such a scenario.

Economic and market background

The synchronised deceleration in global growth and increased *Imancial market volatility witnessed in 2018 were influenced* by several critical factors. These included escalating global trade tensions, the economic slowdown in China, uncertainty over US monetary policy, and ongoing geopolitical developments. Despite this challenging backdrop, the GCC region is expected to achieve GDP growth of 2.4 per cent in 2018 and 3.0 per cent in 2019 following a 0.4 per cent contraction in 2017, according to latest forecasts by the IMF. This positive outlook is supported by the sustained increase in oil prices, a slower pace of fiscal consolidation, and the growing success of economic transformation programmes by governments across the region, led by Saudi Arabia.

After facing two years of significant pressure, the regional banking sector exhibited signs of recovery in 2018, benefiting from stronger economic growth and increased government spending on public infrastructure projects. GCC banks continued to take steps to restructure their operating models in order to cope with an increasingly complex digitized and technology-driven ecosystem. This is allowing them to place greater focus on business growth and new development opportunities, build and maintain customer loyalty, and strengthen their competitiveness.

Financial results

I am pleased to report that GIB delivered an improved top line financial performance in 2018. Gross income increased by 11 per cent to US\$398 5 million from US\$360 3 million the previous year, while net income before provisions and tax also grew by 11 per cent to US\$133.1 million compared with US\$120.3 million in 2017. These positive results reflect continued growth and higher contributions from the Bank's diversified business lines. Not interest income increased by US\$20.6 million or 8 per cent to US\$273.7 million, while non-interest income increased by 16 per cent to US\$124.8 million. The latter is attributable to a higher return on GIB Capital-managed KSA equity investments, and fee income from GiB Capital's discretionary portfolio management mandates, together with an increase of 32 per cent in customer-related foreign exchange income. The Bank also benefited from an exceptional recovery on a previously written-off asset

Total operating expenses in 2018 rose by 11 per cent to US\$265.4 million from US\$240.0 million a year earlier. The increase is attributable to costs associated with the ongoing implementation of CIBs business diversification and expansion strategy, including the planned new subsidiary in Saudi Arabia, as well as additional investment in the IT infrastructure to support the launch of innovative new services and products.

Dr Abdullah bin Hassan Alabdulgader Chairman

After an exceptional four provision charge of US\$355 million, a net loss of US\$227.0 million was recorded in 2018 compared with net income of US\$70.0 million in 2017. The provisions relate to challenging macro-economic conditions which impacted the business environments of several GCC countries in which the Bank operates, resulting in a higher level of non-performing loans during 2018. The higher level of provision coverage at 103 per cent for non-performing loans will enable GIB to focus on its strategic and business initiatives in 2019 without undue distractions, and also enable the planned new subsidiary in Saudi Arabia to commence operations on a firm rooting.

GIB continued to maintain a strong balance sheet in 2018 Consolidated total assets at the end of the year stood at US\$27.5 billion, an increase of 8 per cent from US\$25.5 billion at the end of 2017 with the asset profile reflecting a high level of liquidity Cash and other liquid assets, and short-term placements, increased by 21 per cent to US\$12.9 billion, representing 47 per cent of total assets. Placements with banks exceeded deposits from banks, with GIB continuing to be a net lender to the interbank market. Loans and advances in 2018 reduced marginally to US\$9.8 billion compared with US\$10.0 billion in the previous year.

Funding profile

The Banks funding profile improved during 2018 due to continued growth in corporate customer deposits, and also increased contributions from meem digital banking and global transaction banking activities, which constitute important new sources of less costly and more stable funding. Customer deposits grew by 15 per cent in 2018 to US\$18.3 billion, accounting for 89 per cent of total deposits, and exceeding loans and advances by 1.9 times. GIB also closed a US\$500 million three, voir financing. Facility, which was oversuls cribed and upsized from an initial amount of US\$250 million due to strong appetite from nine leading regional and international banks in flecting continues market confidence in GIB.

Ratings confirmation

The international rating agencies again endorsed their tenfine cert. Get: financial strength of the 2018 fitch fations attimed the banks long terral such default integrit(DR) at 'BBB+' with a Stable outlook, while Moody's Investors to the international training of the with a Negative outlook. The Bank's ratings were maintained despite a change in Moody's Bahrain sovereign rating to 'BB' from 'BB' and the revision of the Kingdom's Country—ithing to both a property of the continuation of the Parks rating such as the continuation of the Parks rating and the strength of the Parks rating structure, adequate capitalisation and

competent management, and stable asset quality and high tiquidity. They also reflect the fact that the majority of the Bank's operating activities are outside Bahrain, and therefore treaffected by the deangrade of the Kingdom of Bahrain sovereign rating. Significantly, GID is the only pank in Bahrain whose ratings are not subject to the Moody's sovereign rating cap.

Strategic progress

Implementation of the Bank's strategy to be a leading pan-GCC universal bank gathered greater momentum during the year. The two most significant strategic business developments entailed final preparations for converting GBs branches in Saudi Arabia into a locally-incorporated bank, which is planned to take place during the first quarter of 2019, and the launch of meem in Bahrain during April 2018, as the regions first fully-digital retail bank featuring online customer onboarding

The establishment of the new subsidiary, Gulf International Bank - Saudi Arabia, marks an important milestone in our regional expansion initiatives, and will open up new opportunities in the regions largest market. It also reflects the steps we are taking to align GIB's strategy more closely with the Kingdom's Vision 2030 in this respect, we recently established a new Micro, Small and Medium Enterprises (MSME) function, which will support the Government's objective of boosting the development of the Small and Medium Enterprises (SME) sector as a critical engine of economic growth

Innovation and sustainability

The importance that GIB places on innovation as a distinct competitive different stor was illustrated by two six hife and developments disting the year The finite real aid the formation of a new Board level Innovation Committee celicand to be the first of its and native global banking industry which will guide and encourage the growth of innovative initiatives across the Bank. In the second, a dedicated Innovation function was established to work closely with the business lines in developing and launching new innovative products and services. In addition, GIB's Rowad Awards and Recognition programme will incorporate a new Innovation Award in 2019 to foster a greater sense. Control of the contro 31101 Ch developments will move GIB closer to achieving its vision. habeth contened from a security movels including innovative solutions', supported by its culture of excellence. and its core values of collaboration, perceptiveness, agility. and integrity

Chairman's statement (continued)

GIB also recognises its responsibility as a financial institution to support the economic, social and environmental sustainability of the communities in which it operates around the world During 2018 the Bank's corporate social responsibility programme - WAGIB - was strategically realigned to our business activities as the most effective way of creating sustainable value for stakeholders. To illustrate this point, GIBUK's new five-year asset management strategic plan – 'Responsible Investments, Sustainable Growth' places sustainability at the heart of its business activities Reinforcing this commitment, the UK-based subsidiary became a signatory to the UN-supported Principles of Responsible Investment (PRI) in 2018, the first and only bank with majority Saudi ownership to have signed up GIBUK has published a number of well-received thought pieces on topics including 'Sustainable and Responsible Investments', and 'ESG Data Indiscretions A Sanity Check on Practicality'

Institutional capability

GIB

During 2018 we continued to strengthen GIB's institutional infrastructure in order to support the realisation of our strategy and continued business growth. In this respect, we significantly enhanced our human capital through the recruitment of highly experienced and qualified professionals across a range of disciplines, and further strengthened the Executive Management Team. We also continued to invest in latest technologies, such as robotics, to streamline back office operations and improve cost officiencies.

In addition, we enhanced the Bank's corporate governance and risk management frameworks to comply with the latest regulatory requirements, and ensure that GIB remains robust and resilient in the face of increasingly votatile economic and market conditions. Particular focus was placed on addressing certain risk issues identified as a result of the provisioning exercise. These include a more cautious approach to the onboarding of new clients, managing risk more closely at a country level enhancing remedial efforts and regularisation of problem accounts, and adopting more aggressive recovery strategies.

New Board of Directors

in August 2018, a new Board of Directors was appointed for a three-year term. I would like to welcome the members of the new Board at this important juncture for the Bank, and look forward to the contributions they will make towards the achievement of GIB's strategic and business objectives. The experience of our new Directors in areas such as digital banking innovation, and legal and financial affairs, will add significant value to the Bank and the fulfilment of the aspirations of our shareholders, clients and employees. I would also like to extend my sincere appreciation to the exiting Board, whose members played a positive role in enhancing the Bank's regional and international presence.

Looking ahead

The economic outlook for the GCC in 2019 remains positive, with the IMF forecasting regional GDP to reach 3.0 per cent, together with strong growth in each of the six Gulf States. This is expected to be supported by a continuation of higher oil prices, stronger non-oil sector growth prospects, and improved economic and market conditions arising from government-led reforms. Together with a slower pace of US monetary tightening and a weaker dollar, these factors are likely to translate into a favourable operating environment with signific ant new business opportunities, which will benefit the GCC banking sector.

With branch offices in London and New York. Gulf 'International' Bank has a distinct advantage over many of its larger regional competitors by being able to provide clients with a vital investment and business conduit between the region and the rest of the world. GIB also benefits from highly-supportive shareholders, a high-calibre and experienced team of professionars, diversified business activities and geographic footprint, and unique market knowledge and insight. Due to the Bank's significant strategic, business and operational achievements in 2018 and previous years, we enter 2019 with greater enthusiasm, confidence and optimism, and a stronger sense of purpose with which to face the many challenges that lie ahead.

Acknowledgements

On behalf of the Board of Directors, I would like to express my sincere appreciation for the unwavering confidence and support of our shareholders, the enduring trust and loyalty of our clients, and the continued encouragement and cooperation of our counterparties. We are also grateful for the ongoing advice and guidance that we receive from the regulatory and supervisory bodies in the various jurisdictions under which GIB operates. I also take this opportunity to pay tribute to the commitment and professionalism of our management and staff and their positive attitude towards embracing change and implementing the Bank's ongoing strategic and cultural transformation in another highly-challenging year.

Management review

Looking back over the past twelve months, it is increasingly evident that global economic uncertainty and market volatility, disruptive technologies and unpredictable external shocks, are now the norm rather than the exception. Notwithstanding this challenging backdrop to 2018, I am pleased to report that GIB passed a number of important new milestones in its journey towards further geographic expansion and business diversification, and improved operational efficiency.

KEY HIGHLIGHTS OF THE YEAR

- Entered the final stages of establishing CIB's new Saudi Arabian subsidiary
- Launched meem digital retail bank in Bahrain and grew meem in Saudi Arabia
- Developed innovative new digital Global Transaction Banking products and services
- Expanded Asset Management business with launch of new mutual funds in Saudi Arabia
- Increased investment in technology to improve operational and cost officiencies
- ▲ Introduced 'Building the GIB Talent Pipeline' initiative to enhance human capital

I would like to highlight some of the notable achievements in 2018 that demonstrate the excellent progress we have inade against the Bank's five key strategic focus areas. These are reported in more detail in the following Strategy Report

During the year, we invested considerable time and effort in finalising preparations for the establishment of GIB's new subsidiary in Saudi Arabia. This involved addressing all necessary regulatory requirements, and putting in place a robust operating infrastructure to manage cost efficiencies through the centralisation and automation of key support functions. While our standing in the Kingdom of Saudi Arabia is historically strong, the new subsidiary will serve to cement our presence, and enable GIB to compete as a peer in the market as a local entity, no longer constrained by its foreign branch status.

In another notable milestone, we successfully launched meern as the first digital retail bank in the Kingdom of Bahrain, and the lirst in the region to offer digital onboarding of customers. This was very well received and enjoyed a very strong uptake. At the same time, we strengthened meem in Saudi Arabia through a new online onboarding solution and enhanced digital architecture, together with the introduction of new innovative products and services.

Mr. Abdulaziz A Al-Helaissi Group CEO and Board Member

11 1 1 1 1

Carpara Caratica

; , , ,

Same Company

Our Global Transaction Banking (GTB) digital proposition, which initially focused on trade finance and cash manar, ementise vices was augmented during the year with a range of innovative new products and services, many of which are the first to be offered in the egion. They include open banking through the use of application programming interfaces (APIs), virtual account management supply chain final deal direct time data management. These have enabled GIB to attract numerous new clients from business segments that were previously the sole province of larger local and regional banks.

We also expanded our asset management business through the introduction of new products and services, most notably the launch of the Bank's first thyo mutual equity funds in

Saudi Arabia by GIB Capital With total discretionary assets under management of US\$15 6 billion, GIB ranks as one of the largest institutional asset managers in the region

Developing a robust, resilient and secure support infrastructure remains a key strategic priority, and we continued to invest in enhancing our human and technical resources during the year. Now innovative learning

initiatives have been designed and introduced to position GIB as a 'talent magnet' for GCC reation it. In the regional final crafts of vice sector and 'oldevelop the fill potential to four staff he addition, increased automation, including the use of robotics and straight through processing (STP), is helping to drive operational and cost of the entire sectors of gains and

One of the key contributing factors to our success over the past 43 years has been the Bank's enthusiasm to adapt and change in a constantly-evolving global fir ancial environment innovation is a critical competency that we continue to foster in order to remain a pioneer in the region and beyond, and further strengthen our competitive edge

Looking ahead to 2019, we will continue to build upon our achievements to date in order to do iver stronger fin a challength and greater shareholder value. This will be driven by the originist diversification of our business mix and geographic footprint. Despite the numerous challenges that he ahead, we are optimistic about GiB's future prospects.

Abdulaziz A. Al-Helaissi Group CEO & Board Member

Sustainability and corporate citizenship review

GIB recognises that sustainable development is an institutional commitment, and constitutes an integral part of the Bank's pursuit of both good corporate citizenship and sound business management. GIB honours this commitment through its WAGIB Sustainability and Corporate Social Responsibility (CSR) Programme.

In 2018, WAGIB was strategically realigned to the Bank's business activities as the most effective and relevant way of creating sustainable value for all stakeholders. In addition, to ensure that this commitment permeates the entire organisation, Sustainability & CSR key performance indicators (KPIs) were introduced. Divisions are now required to organise a minimum of four initiatives each year in which their team members must participate. Divisional initiatives are highlighted in this Review.

WAGIB programme pillars are:

SUSTAINABILITY	The state of the s		
BANKING AND FINTECH	HEALTH AND WELL-BEING		
COMPLIANCE & RISK	ENVIRONMENTAL PROTECTION		
CAREER DEVELOPMENT	CHARACTER STUDIES STUDIES		

Sustainability and corporate citizenship review (continued)

SUSTAINABILITY

Responsible Investment

In September 2018, GIBUK became a signatory to the UN-supported Principles for Responsible Investment (PRI), as the first and only bank with majority Saudi ownership to sign up. This underlines the Bank's belief that 'investment activity can no longer support economic activity that is unsustainable' PRI is the world's leading proponent of responsible investment which seeks to promote understanding of the investment implications of environmental, social and governance (ESG) factors. GIBUK has so far published two well-received thought pieces. 'Sustainable and Responsible investing' and 'ESG Data Indiscretions.'

Sustainable Financing

Through its investment banking, corporate lending and trade finance activities, GIB contributes to the economic, business and social sustainability of the GCC. In 2018, the Bank jointly managed sovereign and sub-sovereign bonds and Sukuk issuances by Saudi Arabia, Bahrain and Oman, and two Sukuk issues from the IDB, a multilateral Islamic development bank promoting social and economic development in Muslim countries and communities worldwide. In addition, GIB supported projects in Bahrain and Saudi Arabia providing seawater desalination and renewable energy, environmental-friendly and energy-efficient district cooling, and safe, sustainable and efficient metro public transportation.

World Economic Forum

GIB is a member of the World Economic Forum (WEF), which is a leading international organisation for public-private cooperation. Established in 1971, WEF engages the foremost political, business and other leaders of society to shape global, regional and industry agenda. The Forum's activities are founded on the stakeholder theory, which asserts that 'an organisation is accountable to all parts of society'.

Sustainable Development Impact Summit

Katherine Garrett-Cox, CEO of GIBUK, was a speaker at the second WEF Sustainable Development Impact Summit held at the UN General Assembly in New York during September Over 700 delegates from 70 countries attended the event, which aimed to shape an agenda for action on driving progress towards meeting the UN Sustainable Development Goals, and serve as a platform for harnessing cutting-edge scientific, technological and digital innovations.

The Forward Institute

GIBUK is a member of the Forward Institute, which was set up by a select group of major organisations to help the next generation of leaders meet the complex challenges facing business and society. The purpose of the Institute is to build a movement for responsible leadership in and across organisations from the public, private and social sectors.

Celebrating Cultural Diversity

GIB's pilot Cultural Diversity Day, with the theme 'GIB - The Melting Pot was held at Dhahran Office during August This initiative aims to bring different nationalities and cultures in the Bank together to celebrate cultural diversity through various activities such as sharing knowledge about traditions, food, music and national attire. GIB's total headcount of 1,008 staff comprises 34 different nationalities.

One Young World Summit

Representatives from GIBUK attended this annual forum for Young Leaders from global and national companies, which was held at the Hague in October 2018. The forum discussed a range of topics which are aligned with the Principles for Responsible Investment.

Economic review 2018

GLOBAL DEVELOPMENTS

Real GDP Growth (%)

Data Source International Monetary Fund

Key Trends 2018

- Strong fiscal expansion in the United States supported global growth momentum at the start of the year, and offset slower expansion in some other large economies. Feor of the expansion in some other large economies feor of the expansion in some other large economies. Feor of the expansion in some other days of the first six to nine months of 2018, exceeding 3 per cent in annualized term. However, economic prespects softened agent captured by the real market solarity and gloval economic policy uncertainty. By October 2018, sharp gyrctions in global firs, and final kets had resulted in steep declines in equities across most major stock markets, and highlighted the growing fragility in investor sentiment amid concerns that global growth may have peaked
- The deterioration in expectations has coincided with a inscring laber circuit and yeld derpining by finance charket volatility and economic policy uncertainty. The rise in the latter over the course of the year was largely driven by the increasingly protectionist titt in US trade policies, reflected in the laber of a finance of the result in with indicating partners. The heightened uncertainty about trade policy in turn has weighed on future global investment decisions. There has also been a tapering in global economic indicators, notably global industrial production and merchandise trade growth, alongside business.

- In the United States, the economy continued to expand at a fast pace in 2018, as tax cuts and spending increases stimulated demand. The US Federal Reserve also continued to raise the policy interest rates as a result, and fuelled an appreciation in the US dollar against most other currencies. Nevertheless, underlying uncertainty prevailed in line with global trends as interest rates on US long-term bonds have increased less, and point to investor views of risks to future growth. On the other hand, both Japan and Europe slowed down, the former all tributed to a series of natural disasters and adverse weather conditions, and the latter attributed to trade tensions. Brekit uncertainty Italy s.b. diget stand-off strikes in France and continued political uncertainty in Spain, weighing on sentiment.
- In the emerging and developing markets, tightening monetary policy in the United States, a strengthening US dollar heightened financial market volatility, and rising risk premiums intensified capital outflow and currency pressures in many countries, with some vulnerable countries experiening substantial financial stress. Meanwhile, in China, growth continued to moderate, reflecting slo ving external demand growth (exacterbated by the trade if the with the united States) and necessary financial regulatory tightening, atthough this has been partially offset by continued policy stimulus.
- The year proved to be particularly eventful in the currency markets. In the UK, the unclear direction of Brexit and the prolonged period of uncertainty weighed heavily on the pound, while tightening US monetary policy provided a strong basis for the US dollar to strengthen. At the same time, growing economic uncertainty in Europe has meant that despite the end of the quantitative easing programme prospects of this shift in interestrates have weakened considerably.
- Energy markets began the year on a solid footing with growing expectations of a continued upward trajectory in oil prices. Instead, towards the latter half of the year, the oil market experienced its worst annual loss since (i). The index hill of coin oatea market vas a combination of unexpected expansion in supply, and emerging concerns of oil demand growing more slowly than previously anticipated. At the same time, volatile the architect and rising interest rates weighed further on oil market sentiment. Meanwhile continued growth in US shale oil further fuelled uncertainty in the oil market.

Economic review 2018 (continued)

GLOBAL OUTLOOK

- Expansion of the global economy is expected to continue in the near term, although the consensus view of global growth forecasts for 2019 and 2020 have been revised downward. The International Monetary Fund (IMF) has also lowered its expectations, with the global economy forecast to grow at 3.5 per cent in 2019 and 3.6 per cent in 2020 (0.2 and 0.1 percentage points below its October 2018 projections). The IMF attributed the revision to the negative effects of tariff increases enacted in the United States and China and softer global momentum in the second half of 2018, including Germany with the introduction of new automobile fuel emission standards, and Italy, where concerns about sovereign and financial risks weighed on domestic demand.
- The likely softening in the economic momentum is attributed to a combination of factors. These include the continued negative effects of the trade dispute between the United States and China, increased risk of deteriorating economic prospects in Europe and some emerging markets, and ongoing concerns of greater withdrawal (Brexit) of the United Kingdom from the European Union
- The unclear direction of monetary policy, particularly in the United States, has added to concerns following the US Federal Reserve's recent pivot towards a more cautious stance about the scope for increasing interest rates. This has blurred the outlook on global financial conditions, and increased risks of abrupt policy reversals notably if global growth surprises on the upside. Nevertheless, more aggressive interest rate increases and further tightening in global financial conditions could potentially spark financial pressure across emerging market countries, notably those economies with external vulnerabilities.
- The extreme volatility in global crude oil prices over the past year, marked with some of the highest prices seen in almost four years as well as some of the largest single-day drops, is attributed to geopolitical concerns financial moves, supply and demand, as well as some impact from the simmering trade dispute Heading into 2019, the focus will remain on the Organisation of Petroleum Exporting Countries (OPEC) and its cooperation agreement to adjust production with Non-OPEC countries, notably Russia, as well as developments in the US shale oil market. Increased uncertainty in demand dynamics will also influence the trajectory of oil prices aimid a variety of global economic indicators signaling the growing risk of oil demand deceleration.
- The risk of political stress has escalated, largely rooted in growing populist tendencies around the world. Key among these include i) the inward-looking and protectionist stance of current US policies and the adverse consequences for global growth, ii) the rise of nationalist agenda leading to increased policy uncertainty and unpredictability, and iii) country specific political events, including Brexit and ongoing developments in Italy.

GCC OUTLOOK

 Strengthening oil prices enabled an overall improvement in the GCC's economic performance during 2018, notably in the external and fiscal positions. However towards the close of the year the confluence of weaker global growth volatile.

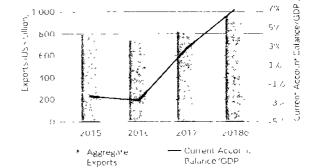

- financial markets, global and regional geopolitical challenges and increased fragility in oil prices have elevated regional risks going forward. Added to this is the uncertain duration of the oil production cuts in compliance with the OPEC / Non-OPEC deal, which may also dampen economic activity over the coming year.
- These rising challenges notwithstanding, the recent dovish shift in US monetary policy will provide some respite for the Gulf region through the pegged exchange rates. Towards the end of 2018, the spread of GCC interbank rates had dropped sharply, and reduced the attractiveness of domestic money markets. Amid expectations of a pause in the US rate rises at least for the coming six months, this will ease the pressure on regional central banks to mirror policy tightening, which also dragged on growth in the non-oil economy. The IMF projects growth in the GCC countries to continue recovering and average 3 per cent in 2019 mainly due to the implementation of public investment projects.
- Overall sentiment towards the GCC economies remains buoyed by regional governments continuing to pursue structural and fiscal reforms, privatizing public assets, improving economic efficiency, and reducing subsidies, while expanding the role of the private sector with the aim of encouraging private investment and job creation. Meanwhile, expansionary fiscal policy will continue to support the non oil sector and offset the challenges posed by a fragile private investment appetite and regional tensions.
- The ongoing adjustment process is being supported by still-low public debt levels and substantial financial buffers GCC sovereign borrowing has usen sharply in an effort to tap external funding to finance deficits and support the economic reform process. Regional capital market activity has increased amid the surge in GCC debt issuances, which has included a combination of conventional bonds and Sukuk issuances. This is supporting the further development of GCC capital markets, including building the yield curve and setting benchmarks. A substantial and sustained improvement in oil prices can reduce the need to borrow externally, but this is unlikely to be the case.
- In the near term, investor appetite will meet the continued uptick in supply supported by the fact that debt levels in the GCC remain at healthy levels despite rising sharply in some cases, and the recent improvement in GCC fundamentals along with ongoing economic and social reform, thereby making the region relatively more attractive for investment prospects. The widening of spreads as a consequence of rising interest rates in the United States has also underpinned the strong appeal of GCC paper, although there is growing risk of sovereign credit downgrades, particularly if GCC regional growth slows domestic and external deficits creep back up. This in turn may have an adverse impact on investor demand and / or the cost of borrowing.
- Despite some expected softening in operating conditions, the GCC banking systems are likely to remain stable, reflecting weakened but still solid loan performance and strong capital. Government spending and stimulus packages will support the economy and underpin the performance of regional financial institutions, although there may be some rise in profitability pressures if downside risks materialize.

Financial review

GIB recorded total income of US\$398.5 million for the year, which was US\$38.2 million or 11 per cent higher than in 2017, with increases in net interest income, foreign exchange income, and other income being marginally offset by decreases in fee and commission income and trading income.

The US\$38 2 million year on-year growth in total income was 50 per cent higher than the increase in total expenses of US\$25.4 million, largely associated with the ongoing implementation of the GIB's business expansion and diversification strategy, including the new subsidiary in the Kingdom of Saudi Arabia that is planned to be operational in the second quarter of 2019, as well as additional investments in the IT infrastructure to support the launch of innovative products and services, with a particular emphasis on digitarisation for the benefit of customers and in order to achieve effective cost efficiencies in the future. After an exceptional provision charge of US\$353.1 million, GIB recorded a net loss after tax of US\$227.0 million compared with net income after tax of US\$70.0 million in 2017.

Net interest income, which at US\$273.7 million represented the Bank's largest income source, was US\$20.6 million or 8 per cent up on the prior year. This reflected positive progress in the implementation of GIB's strategy, as the Bank continues to successfully re-orientate its lending activities from transactional-based, lorig-term project and structured finance to a relationship-based focus on corporate and institutional clients. Additionally, as explained in more detail in the net interest income section of the Financial Review, these positive developments were accompanied by a decrease in the Group's wholesale deposit premium expense and a reduction in the blended cost of funding as a result of meaningful progress in the strategically important global transaction banking and retail banking initiatives.

Fee and commission income at US\$61.2 million comprised 15 per cent of total income. Foreign exchange income at US\$18.6 million was 32 per cent up on the prior year, and primarily comprised revenue from customer-related activities, and in particular, revenues derived from bespoke structured products designed to assist customers in hedging their foreign exchange exposures in volatile markets.

Trading income at US\$9.5 million principally comprised customer-related interest rate derivative income and gains on investments in funds managed by both the Group's London-based subsidiary, GIB (UK) Limited, and its Saudi Arabia-based subsidiary, GIB Capital

Other income at US\$35.5 million was US\$28.0 million higher than in 2017 mainly due to an exceptional asset recovery of US\$26.5 million arising on the sale of a previously \bar{w} itten off asset

An exceptional loan provision charge of US\$353.3 million in 2018 compared to a US\$43.7 million charge in 2017. The provisions related to challenging macro-economic conditions, which impacted the business environments of several GCC.

Financial review (continued)

countries in which GIB operates, contributing to a number of borrowers experiencing stressed financial circumstances and resulting in a higher level of non-performing loans in 2018. Consistent with the Bank's prudent approach to provisioning, increased provisions were proactively made, resulting in a non-performing loan provision coverage ratio of 103 per cent

NET INTEREST INCOME

Net interest income at US\$273.7 million was US\$20.6 million higher than in the prior year.

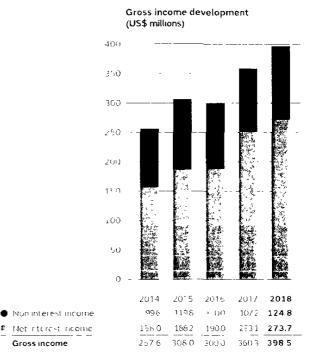

Net interest income is principally derived from the following sources

- margin income on the wholesale loan portfolio,
- margin income on the investment securities portfolio, money book activities,
- retail banking, and earnings on the investment of the Group's net free capital

Net interest income is also net of the cost of term finance and premiums over the benchmark interest rates on wholesale deposits

Higher interest earnings were derived from the investment securities portfolio, the money book, retail banking, and the investment of the net free capital. Additionally, these underlying positive trends in interest earnings were necomparised by a lower cost of term finance and a decrease in the wholesale deposit premium expense in 2018. An ongoing decrease in the wholesale deposit premium expense is partly attributable to notable success achieved in the growth of more stable and lower cost global transaction banking related call and current deposit accounts and retail deposits.

Interest earnings on the wholesale loan portfolio accounted for 62 per cent of the Group's net interest income, before the cos of term thrance and who esale deposit premium expense. Margin income derived from wholesale lending was 8 per cent lower than the prior year. Average performing loan volumes at US\$10.1 billion were in line with the prior year, although average performing loan margins were 19 basis points lower than the prior year. The lower average performing loan margin in 2018 compared to 2017 was principally attributable to a number of higher margin loans being placed on non performing status during 2018, thereby diluting the overall blended average loan margin. The average performing loan margin in 2018 was nevertheless higher than the average loa un irgin recorded prio Te 2017 refer ing the benefit derived from the strategic focus on relationship, lending, as so as the appendance of attested low make those Jordan, Same lang

Margin income on the investment securities portfolio accounted for 9 per cent of net interest income, before the cost of term finance and viriolesale deposit premium explense. The interest earnings from the investment securities portfolio were 16 per cent higher than in the prior year reflecting a 14 per cent year-on-year increase in the average investment security volume. The investment securities portfolio is primarily maintained as a liquidity reserve. The key factors underpinning the portfolio are therefore liquidity and quality rather than income generating characteristics.

Mancy book earnings in present the difference but when the funding cost of interest-bearing assets based on internal transfer pricing methodologies and the actual funding cost incurred by the coopy. This includes branch addition them the restricted in the repricing proble of the Groups interest bearing assets and liabilities. Money book earnings in 2018 accounted for 14 per cent of net interest income, before the conforter of funders of other than the conforter of the conforter

Financial review (continued)

While interest earnings generated by the new digital retail bank, meem, in 2018 were below the threshold to report as a separate operating business segment in note 26 to the consolidated financial statements that sets out business segment information, retail banking nevertheless recorded a more than 250 per cent year-on-year increase in net interest income in 2018. The significant increase in net interest income generated by retail banking was attributable to growth in retail deposits, which accounted for 15 per cent of the Parent Bank's customer deposits at the 2018 year end, a gradual reduction in the premium over benchmark rates, and the launch of retail asset products in the fourth quarter of 2018

Earnings on the investment of the Group's net free capital, which accounted for 13 per cent of net interest income, before the cost of term finance and wholesale deposit premium expense, were 52 per cent up on the prior year. The net free capital was largely invested in shorter duration government bonds, and benefited from the rise in US interest rates during the year, with the shorter tenor fixed rate instruments providing the opportunity to reinvest on maturity at higher yields as interest rates rise in the short-to-medium-term At the end of 2018, more than half of the Group's net free capital was invested in shorter duration fixed rate instruments generating an enhanced return over short-term interest rates. A further rise in US interest rates would have a direct beneficial impact on the Group's interest earnings

The Group continues to minimise its previous reliance on funding longer tenor assets with short-term deposits, and the associated liquidity and refinancing risk, with proactive actions having been taken over the previous five years to raise new term finance to minimise this potential risk. As a result at $31^{\rm st}$ December 2018, the volume of illiquid assets or assets maturing beyond one year that were funded by non-sticky or short-term deposits represented only 3 per cent of non-sticky customer deposits. The majority of customer deposits, and all bank deposits, therefore funded shorter tenor or liquid assets. This effectively addresses one of the key focuses of the new Basel 3 liquidity regulatory guidelines whereby banks will have less ability to fund longer tenor assets with shorter tenor wholesale deposits. The initiatives to reduce the Group's exposure to liquidity risk through various forms of termi finance resulted in a US\$33.2 million or 11 per cent reduction in the Group's net interest income in 2018. The cost of term finance in 2018 was nevertheless 20 per cent lower than in 2017 This was due to a lower average volume of term finance during 2018 as disclosed in note 40 to the consolidated financial statements. The success achieved from the strategic focus on generating more stable and sticky retail and global transaction banking deposits has resulted in a reduced requirement for higher cost term finance to fund longer tenor assets

Financial review (continued)

The year-on-year reduction in fee and commission income was largely due to a US\$100 million, or almost one third, decrease in investment banking and management fees This reflected a lower level of investment in funds managed by the Group, and in particular, lower performance-related fees generated by the funds reflective of the challenging market environment prevailing during 2018. This was most notable in a deterioration in the emerging markets which were adversely impacted by the US / China trade relationship Asset management fees were much in line with the prior year level. As referred to in note 35 to the consolidated financial statements, assets held in a fiduciary capacity amounted to US\$15.6 billion at 31" December 2018 compared to US\$15.9 billion at the end of 2017. However, fund management fees were one third the level recorded in 2017, due to the lower level of investment in the funds and the absence of performance fees

Foreign exchange income at US\$18 6 million for the year was US\$4 5 million or 32 per cent higher than the prior year Foreign exchange income principally comprised income generated from customer-initiated foreign exchange transactions that were offset in the market with matching transactions. Accordingly, there is no market risk associated with the transactions that contribute to this material source of income. The strong foreign exchange earnings reflected continued success in the cross-selling of innovative products to meet customers' needs and requirements, and the development of new products to meet those needs. A growing demand is

being witnessed for these products as customers experience the benefit's derived in effectively managing and hedging their currency exposures. During 2018, the Group continued to expand its customer base to create a broader and a more desirable diversification of earnings from these products, as well as generating repeat business from existing clients.

The Group's various trading activities recorded a US\$9.5 million profit for the year compared to a US\$13.0 million profit in the prior year Trading income is reported inclusive of all related income, including interest income, gains and losses arising on the purchase and sale, and from changes in the fair value of trading securities, dividend income, and interest expense, and including all related funding costs. An analysis of trading income is set out in note 23 to the consolidated financial statements. Trading income in 2018 principally comprised profits recorded on customer-related interest rate derivative income, and on equity securities classified as fair value through the profit or loss (FVTP_). A US\$6.0 million profit was generated from customer-related interest rate derivatives, representing 63 per cent of trading income in 2018. This was only marginally lower than the profit recorded in the prior year During the last few years, the interest rate derivative product range was expanded, with a greater focus on working constructively with customers to identify opportunities to hedge their interest rate exposures, particularly in the context of expectations of a rising interest rate environment. A net gain of US\$3.5 million was recorded on all other tradingrelated activities, comprising trading investments in equity and debt securities, and managed funds. The Group has a limited risk appetite for trading activities. As set out in the analysis of trading securities in note 8 to the consolidated financial statements, the majority of the Group's trading activities relate to seed investments in funds managed by the Group's asset management subsidiaries in KSA and the UK

Other income of US\$35.5 million was recorded for the year An analysis of other income is set out in note 24 to the consolidated financial statements. Other income principally comprised US\$26.7 million of recoveries on previously written off assets, and US\$8.6 million of dividends received from equity investments classified as fair value through other comprehensive income (FVTOCI). A US\$24.9 million year-on-year increase in asset recoveries was mainly due to an exceptional asset recovery of US\$26.5 million in 2018 arising on the sale of a previously written off asset.

OPERATING EXPENSES

Operating expenses at US\$265.4 million were US\$25.4 million or 11 per cent up on the prior year. The year-on-year increase was principally attributable to costs associated with the implementation of the Group's new universal banking strategy, in particular the new digital retail bank (meem), and depreciation and maintenance of information technology assets US\$7.4 million, or almost one third of the year-on-year increase in operating expenses were exceptional and one-off in nature as referred to in note 25 to the consolidated financial statements.

Financial review (continued)

Starf expenses which at US\$156.8 million accounted for almost 60 per cent of total operating expenses, were US\$14.2 million or 10 per cent up on the prior year US\$3.0 million, or almost one third, of the increase comprised exceptional, non-recurring expenses in relation to exemployee costs. The remaining year-on-year increase was largely due to a cost of living allowance for employees in Saudi Arabia, which was introduced in 2018, and general salary increments. A reduction in total headcount took place during 2018 as resources previously engaged on a number of infrastructure related projects were no longer required following the successful completion of these projects. This trend is expected to continue in 2019.

Premises expenses at US\$23.0 million were US\$3.4 million up on the prior year. This was partly due to an exceptional US\$1.5 million reserve in relation to potential additional costs as occuted with prior year office fit out activities, and higher retail banking premises expenses associated with new retail stores in KSA and Bahrain.

Other operating expenses at US\$85.6 million were US\$7.8 million higher than the prior year. The year-on-year increase was principally due to a higher IT depreciation expense. Value Added Tax (VAT) that was implemented in KSA and the UAE at the beginning of 2018, and the introduction of managed service contracts during the year. During 2018, a number of IT-related resources were transferred to a managed service arrangement whereby the Bank engaged vendors to provide specified service rather than engage resources directly. These arrangements resulted in a more cost effective provision of routine IT support services.

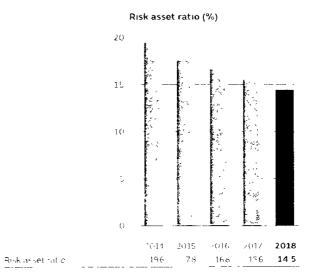

PROVISIONS

In 2018, the Group made an exceptional net loan provision charge of US\$353.1 million, compared to a US\$43.7 million net charge in 2017. Consistent with the Bank's prudent approach to provisioning, increased provisions were provactively made during 2018, resulting in a non-performing loan provision coverage ratio of 103 per cent at the 2018 year end. The charge combined heriet of 1005.359.2 million here specific (stage.1) provision charge. Indicate 125.359 million here specific (stage.1) and 2) provision charge.

CAPITAL STRENGTH

fotal equity amounted to US\$2,196.2 million at 31.1 December 2018. At the 2018 year end, the ratio of equity and tier 1 capital to total assets were both 8.0 per cent, ratios that are relatively high by international comparison.

A US\$214.7 million decrease in total equity during 2018 mainly comprised the net of the US\$227.0 million loss for the year an US\$11.5 million net increase in the fair value of the year factor of the decrease in the fair value of the extra entries of the decrease in the fair value of the extra entries of the decrease in the fair value of the extra entries of the decrease control of the decrease pension fund of the Group's London based subsidiary, GIBUK

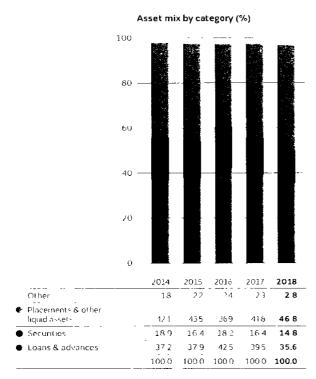

With a total regulatory capital base of US\$2,341.4 million and total risk-weighted exposure of US\$16,108.3 million, the risk asset ratio calculated in accordance with the Central Bank of Bahrain's Basel 3 guidelines was 14.5 per cent while the tier 1 ratio was 13.6 per cent. In accordance with international regulatory guidelines, the fair value adjustments to equity mising unider IERS 9 in creation to derivative cash flow houges are excluded from the regulatory capital base, while unrealised pair sland to see an equity investicents classified as EVICCI are included in the regulatory capital base.

The risk asset ratio incorporates both market and operational risk weighted exposures. With approval from the Central Bank of Bahrain (CBB), the Group applies the internal models approach for market risk, and the standardised approach for determining the capital requirement for operational risk. This demonstrates that the Group's regulate is setisfied that the Group's risk management framework fully meets the guidelines and requirements prescribed by both the Central Bank of Bahrain and the Basel Committee for Banking Supervision.

The Risk Management and Capital Adequacy report set out in a later section of the Annual Report provides further detail on capital adequacy and the Group's capital management framework. The Group's policies in relation to capital management are set out in note 2.7.5 to the consolidated in an include the Group's policy is to maintain a strong capital base so as to policy in recommendation of the Group's business.

Financial review (continued)

ASSET QUALITY

The geographical distribution of risk assets is set out in note 28 to the consolidated financial statements. The credit risk profile of financial assets, based on internal credit ratings is set out in note 27.1(b) to the consolidated financial statements. This note demonstrates that 80 per cent of all financial assets comprising liquid assets, placements, securities, loans, and credit-related contingent items, were rated 4- or above, i.e. at or above the equivalent of investment-grade rated

Further assessment of asset quality can be facilitated by reference to note 37 to the consolidated financial statements on the fair value of financial instruments. Based on the valuation methodologies set out in that note, the net fair values of all on- and off-balance sheet financial instruments at 31th December 2018 were not significantly different to their carrying amounts.

At the 2018 year end, cash and other liquid assets, reverse repos and placements accounted for 47 per cent of total assets, investment securities accounted for 14 per cent, while loans and advances represented 36 per cent

Investment Securities

Investment securities totalled US\$3,897.2 million at 31st December 2018. The investment securities portfolio primarily represents the Group's liquidity reserve and accordingly, principally comprises investment-grade rated debt securities issued by major international and regional financial institutions and government-related entities.

Investment securities comprise two types of debt security portfolios and a limited investment in equities and equity funds. The larger debt security portfolio comprises floating rate securities or fixed rate securities that have been swapped to yield constant spreads over LIBOR. These accounted for US\$2,887.5 million, or 77 per cent, of total investment debt securities at the 2018 year end. The smaller debt security portfolio represents the investment of the Group's net free capital in fixed rate securities. This portfolio amounted to US\$841.2 million at the end of 2018 and comprised investments in OECD and GCC government-related bonds.

Equity investments at the end of 2018 amounted to US\$168.5 million. Equity investments at 31° December 2018 included listed equities amounting to US\$125.6 million received a number of years previously in settlement of a secured past due loan. These equity security holdings are being gradually liquidated over time. The remaining equity investments largely comprised private equity-related investments.

An analysis of the investment securities portfolio by rating category is set out in note 9.1 to the consolidated financial statements. US\$3,207.8 million or 86 per cent of the debt securities at the 2018 year end were rated A- / A3 or above Based on the rating of the issuer, a further US\$273.6 million or 7 per cent of the debt securities represented other investment-grade rated securities US\$247.3 million or 7 per cent of debt securities were rated below investment grade, i.e. below BBB- / Baa3. These principally comprised debt securities issued by a GCC government.

There were no past due or impaired investment securities at 31st December 2018. All debt securities at the 2018 year end were categorised as stage 1 for provisioning purposes.

Loans and Advances

Loans and advances amounted to US\$9,817.8 million at the 2018 year end. This represented a US\$225.3 million or 2 per cent decrease compared to the 2017 year end, due to a US\$350.3 million increase in provisions. As is evident from note 40 to the consolidated financial statements, the average volume of loans and advances during 2018 was US\$10,262.0 million, being in line with the average volume during 2017. Gross loans and advances at 31 December 2018 were US\$125.0 million up on the 2017 year end.

Financial review (continued)

Based on contractual maturities at the balance sheet date, 61 per cent of the loan portfolio was due to mature within one year while 80 per cent was due to mature within three years Only 11 per cent of loans were due to mature beyond five. years. Details of the classification of loans and advances by industry are set out in note 10.2 to the consolidated fin incial statements while the geographical distribution of loans and advances is contained in note 28 At 31 December 2018, 18 per cent of the gross loan portfolio comprised exposure to the energy, oil and petrochemical sector compared to 38 per cent at the end of 2011. This sectorial exposure reflects the Groups previous strategic focus on project finarice and syndicated lending in the GCC states. These lower margin transaction. based legacy towns are on run off startus. At the 2018 year end, the largest industry sectorial exposure was to the trading and services sector comprising 19 per cent of gross loans, reflecting the strates, of dous or relationship based length, There was limited exposure to the construction (8 per cent of gross loans) and real estate (7 per cent of gross loans) sectors at the 2018 year end

The creaturisk profile of loans and advances leased or informal credit ratings, is set out in note 27.1(b) to the consolidated financial statements. US\$6.189.7 million or 53 per cent of total loans were rated 4. or above, i.e. the equivalent of investment grade-rated Only US\$732.3 million or 7 per cent of loans and advances, net of provisions for impairment, were classified as stage 2 exposures in accordance with IFR s.9 (2011) i.e. Lanexposures that had exportenced a significant increase in credit risk since inception. In addition, exposures classified as stage 3 in accordance with IFRS 9 (2014) viero only US\$26.1 million, net of provisions for impairment. Stage 3 exposures are those exposures which are superficially provisioned based on the present value of expected future can flow.

Total loan loss provisions at 31" December 2018 amounted to US\$763.9 million. Counterparty, specific provisions (stage 3) amounted to US\$623.3 million while non-specific provisions (stages 1 and 2) were US\$140.6 million. Total provisions of US\$763.9 million represented 103 per cent of the gross book value of past due loans.

Succerdiption for an addition of the colored amount of the loan. The recoverable amount is measured as the present value of the expected fallete cash flows discounted based on the interest rate at the inception of the facility.

Non-specific four-provisions of USI 145 mm for st 31. December 2018 represented a high 1-4 per cent of nonspecifically provisioned icini

Financial review (continued)

For the purpose of the calculation of the non-specific (stages 1 and 2) provisions, the Group only takes account of collateral held in the form of cash or exchange-traded equities. While collateral in the form of securities, unlisted equities and physical assets is used for risk mitigation and protection purposes, it is not taken into account in the calculation of the non-specific provision.

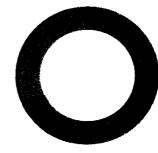

The gross and net book values of past due loans at 31" December 2018 amounted to U\$\$741.3 million and U\$\$1180 million respectively. The specific provisioning coverage for past due loans was 84 per cent. Past due loans are defined as those loans for which either principal or interest is over 90 days past due. Under IFRS 9, interest on impaired loans should be recognised in income based on the net book value of the loan and the interest rate that was used to discount the future cash flows for the purpose of measuring the recoverable amount. However, in accordance with guidelines issued by the Group's regulator, the CBB, interest on past due loans is only to be recognised in income on a cash basis. In view of the Group's high provisioning coverage for impaired loans, the difference between the two bases of accounting is not material.

Other Asset Categories

Cash and other liquid assets, amounting to US\$5,114.2 million at the 2018 year end, are analysed in note 5 to the consolidated financial automorphis. They principally comprised cash and balances with central banks and banks in the key geographic locations in which the Group operates

Placements totalled US\$6,770.8 million at the 2018 year end and were well diversified by geography abillustrated in note 28 to the consolidated financial statements. Placements were largely with European, GCC and North American bank counterparties, representing the Group's principal operating locations. Placements represented 25 per cent of total assets at the 2018 year end. The year-on-year increase in placements was principally due to an increase in deposits from rustomers reflecting a such or level of deposit activity by the Group's London based subsidiary, Gulf International Bank (UK) Limited. At the end of 2018, placements were supplemented by US\$1,015.9 million of securities purchased under agreements to reselt. These represented collateralised placements, thereby reducing the Group's risk exposure to the financial institution.

An analysis of trading securities is set out in note 8 to the consolidated financial scatements. Trading securities at US\$177.7 million at 31. December 2018 largely comprised investments in managed funds.

Risk Asset and Commitment Exposure

Risk asset and commitment exposure at 31° December 2018 amounted to US\$31,330 0 million. Risk assets and commitments comprise all assets included in the balance sheet (with the exception of other assets) and credit-related contingent items. As referred to earlier, an analysis of risk asset and commitment exposure by category and geography is contained in riste 25 to the consolidated financial statements. As is evident from this note, US\$20,787.4 million or 66 per cent of total risk assets and commitments represented exposure to counterparties and entities located in the GCC states. The remaining risk asset exposure largely represented short-term placements with major European banks, and investment securities issued by highly-rated issuers in Europe, North America, and Asia. An analysis of derivative and foreign exchange products is set out in note 31 to the consolidated financial statements were a further analysis of credit related contingent items together with their risk-weighted equivalents is contained in note 32

FUNDING

Bank and customer deposits at 31' December 2018 totalled US\$20,694 6 million. Customer deposits amounted to US\$18,322 4 million at the 2018 year end, representing 88 per cent of total deposits. Bank deposits at 31' December 2018 amounted to US\$2,372 2 million, representing only 12 per cent of total deposits.

Total deposits are analysed by geography in note 13 to the consolidated financial statements. US\$ 3.574.0 million or 66 per cent of total deposits were derived from counterparties in GCC countries. Deposits derived from non-MENA countries, principally Europe, amounted to US\$6,653.7 million or 32 per cent of total deposits. The deposits from counterparties in non-MENA countries largely related to deposit activity by GIBUK. These deposits do not represent a core funding source for the Group. This compares to placements, reverse repos and other liquid assets with non-MENA counterparties of US\$8,599.7 million which are placed on a short-term basis in the money market. The Group is therefore a net placer of funds in the international interbank market, and accordingly has no net reliance on the international interbank market.

Securities sold under agreements to repurchase (repos) were US\$735.4 million at 31° December 2018. The Group utilises its high quality and highly rated investment securities to raise funding on a collateralised basis where effective from a cost and tenor perspective, as well as constantly validating its ability to repo the securities as part of the Group's liquidity contingency plans.

Senior term financing at 31 *December 2018 totalled US\$3 338.0 in llion. Term finance and equity represented 143 per cent of loans maturing beyond one year.

Further commentary on liquidity and funding is provided in the Risk Management and Capital Adequacy report

Corporate governance report

When Gulf International Bank B.S.C. ("GIB" or the "Bank") was established in 1975, its Agreement of Establishment and Articles of Association (AoA), executed at the time by the GCC Governments that created it, set the foundation of solid governance practices for the Bank. From the start, sound corporate governance has been considered essential at GIB, both in achieving organisational integrity and efficiency, as well as in attaining fairness to all stakeholders.

SOUND GOVERNANCE PRACTICE

Over the years, GIB has progressively adopted and implemented standards of corporate governance relevant to publicly-traded financial institutions, although it is not a listed company. Since 2003, the Bank has regularly published a statement on corporate governance in its annual reports.

Currently, GIB has in place many measures that are hallmarks of good corporate governance practices, such as comprehensive mandates for the Board of Directors (Board) and for Directors and for Board Committees, a Code of Conduct (Code of Conduct, Ethics and Avoiding Conflicts of Interest) in both English and Arabic published on the Bank's website, and a detailed operating policy that anticipated the new requirements of the Central Bank of Bahrain (CBB) Subsequently, GIB adopted additional measures that included, among other things, an updated Board Charter and updated mandates of the Board Committees, an enhanced Whistle Blowing Policy, a Board Corporate Governance Committee, the establishment of a dedicated Corporate Governance Unit within the Compliance department, and an update of its variable remuneration framework to fully comply with the Sound Remuneration Practices issued by the CBB

The Board and its respective Committees' mandates are subject to an annual review to ensure that they continue to reflect the current processes, best practices and any new regulatory requirements. The last updates were shared with the Board on its meeting of 16 $^{\rm h}$ December 2018

The Board Charter is posted in its entirety on the Bank's website (www gib com), and largely reflects the corporate governance requirements contained in the HC (High Level Controls) Module of the CBB Rulebook Volume 1

Corporate governance report (continued)

The measures adopted by GIB formally entrenched a culture of professional corporate governance across the organisation. They also demonstrated GIB's commitment to financial transparency, fairness and disclosure of financial information that will benefit all users of such information, including regulators, customers, counterparties, rating agencies and other stakeholders.

In March of every year, the Board prepares for its Shareholders' Annual General Meeting (AGM) a report on GiB's compliance with the CBB rules on corporate governance, which explains any non-compliance. The explanations contained in this year's "Comply or Explain" report are reproduced at the end of this Report.

GIB discloses in the Annual Report additional information required to be disclosed in accordance with Section PD-1-3-8 of the CBB Rulebook Volume 1, and the Board also discloses to the Shareholders the information required to be disclosed to them annually in accordance with Section PD-6-1-1 of the Rulebook

SHAREHOLDERS

ORGANISATION - RULES AND ROLES

GIB maintains a corporate governance structure that delineates and segregates the functions, roles and responsibilities of the Board and Management, and ensures that the requisite separate attribution of responsibilities between them is maintained

- There is an effective and appropriately constituted Board responsible for the stewardship of the Bank and the supervision of its business. It receives from Management all information required to properly fulfillits duties and the duties of the committees that assist it, and it delegates to Management the authority and responsibility for managing the day-to-day business of the Bank.
- The elision effective and appropriately organised management structure responsible for the day-to-day management of the Bank and the implementation of Board approved strategy, policies and controls
- There is a clear division of roles and responsibilities between the Board and Management, and between the Chairm an and the Group Chief Executive Officer (CEO)
- There are defined and documented man dates and responsibilities (as well as delegated authorities where applicable) for Senior Management

The Bank's corporate governance structure and organisation chart is set out on page 64 of this Annual Report

Corporate governance report (continued)

BOARD OF DIRECTORS

GIB

Under GIB's AoA, the Board comprises up to 10 members to be appointed or elected every three years. The AoA gives the right to each Shareholder holding 10 per cent of the share capital to appoint one member on the Board. The Shareholders exercising this right also have the right to terminate such appointment and replace the relevant. Directors. The appointment of Directors is subject to prior approval from the CBB. In August. 2018, the Public Investment Fund (PIF), as holder of 97.226 per cent. shareholding percentage, appointed the new Board of Directors for the period from August. 2018 till August. 2021. During the first Board meeting in October. 2018, Dr. Abdullah. Alabdulgader was appointed as the Chairman of the Board, and Mr. Abdulla Al Zamil as the Vice Chairman of the Board.

GIB has a written appointment agreement with each Director. This agreement describes the Directors' powers, duties, responsibilities and accountabilities, as well as other matters relating to their appointment including their term, the time commitment envisaged, their assignment to Board Committees, their remuneration and expense reimbursement entitlement, and their access to independent professional advice when needed

At the year end, the Board comprised eight Directors of whom seven are non-executive directors, including the Chairman and Vice Chairman, and one executive Director, who together bring a wide range of skills and experience to the Board Their biographies are set out on page 57 of this Annual Report

INDEPENDENCE OF DIRECTORS

The independence or non-independence of the Directors is subject to an annual review by the Board. As at 31 December 2018, one Director of the Bank was classified as non-independent in accordance with CBB regulations, and the other Directors were classified as independent (see table on page 43).

BOARD RESPONSIBILITIES

The Board is responsible for the overall business performance and strategy of the Bank

The Board establishes the objectives of the Bank, the adoption and annual review of strategy, the management structure and responsibilities, and the systems and controls framework. It monitors Management performance, and the implementation of strategy by Management, keeps watch over conflicts of interest, and prevents abusive related party transactions.

The Board is also responsible for the preparation and fair representation of the consolidated financial statements in accordance with International Financial Reporting Standards, and for such internal controls as the Board determines is necessary to enable the preparation of the consolidated financial statements that are free from material misstatement, whether due to fraud or error

The Board also convenes and prepares the agenda for Shareholders' meetings, and assures equitable treatment of Shareholders including minority Shareholders

Finally, the Board delegates to Management the responsibility for the day-to-day management of the Bank in accordance with policies, guidelines and parameters set by the Board

In preparation for Board and Committee meetings, the Directors receive, in a timely manner, regular reports and all other information required for such meetings, supplemented by any additional information specifically requested by the Directors from time to time. The Directors also receive monthly financial reports and other regular management reports that enable them to evaluate the Bank's and Management's performance against agreed objectives. As prescribed in GiB's AoA, the Board plans at least four meetings per year, with further meetings to occur at the discretion of the Board.

The details of Board membership and Directors' attendance during 2018 are set out in the following table

EXECUTIVE COMMITTEE

The mandate of the Executive Committee requires it, among other things, to

- 1 Assist the Board in formulating the executive policy of the Bank and controlling its implementation
- 2 Assist the Board by reviewing, evaluating, and making recommendations to the Board with regard to key strategic issues or material changes in key strategic objectives or direction
- 3 Approve credit limits that exceed the authority of the Group CEO, subject to the limits approved by the Board
- 4. Carry out add-tro-altresponsibilities specifically mandaled to it by the Board.
- 5 Exercise the powers of the Board on matters for which the Board has not other wise given specific direction in circumstances in which it is impossible or impractical to convene a meeting of the Board (and subject to applicable law and GIB's Agreement of Establishment & Articles of Association). However, the Board may, acting unanimously, modify or amend any decision of the Committee on such matters.

In all cases, members of the Committee must exercise their business judgement to act in what they reasonably believe to be in the best interests of the Bank and its Shareholders

AUDIT COMMITTEE

The role of the Audit Committee is to review the Group's financial position and make recommendations to the Board on financial matters internal controls in mixinance and legal requirements. Its responsibilities include

- 1 Assisting the Board in its oversight of (i) the integrity and reporting of the Board's quarterly and control financial statements, (ii) compliance with legal and regulatory requirements, (iii) the Bank's systems of internal control and (iv) the qualifications independence and performance of the Bank's internal and external auditors
- 2 Overseeing performance of the Bank's internal audit function and independent audits

The mandate of the Audit Committee provides further pure continuous attemporting procedures, and additional ethical and legal compliance overview responsibilities. The Group Chief Auditor reports functionally to the Audit Committee and administratively to the Group CFO.

Corporate governance report (continued)

RISK POLICY COMMITTEE

GIB

The Committee assists the Board in fulfilling its oversight responsibilities in respect of setting the overall risk appetite, parameters and limits within which the Bank conducts its activities. On an on-going basis, the Committee

- 1 Ensures that realistic policies in respect of management of all significant risks are drafted and approved appropriately
- 2 Receives, reviews, challenges and recommends for approval by the Board any proposed amendments to the overall risk appetite of the Bank
- 3 Monitors whether Management maintains a culture that rewards the recognition, communication and management of risks
- 4 Ensures that roles and responsibilities for risk management are clearly defined with Group and/ or division heads directly responsible, and that heads of risk management and the control functions are in supporting or monitoring roles, independent of business development
- 5 Ensures that Management reports significant excesses and exceptions, as and when they arise, to the Committee for information and review
- 6 Ensures that, on a timely basis, Management informs the Committee of all significant risks arising, and that it is comfortable with Management's responses and actions taken to address such findings
- 7 Reviews the Bank's risk profile and significant risk positions and in so doing
 - Receives reports on credit exposure by country, credit rating, industry/concentration, nonperforming loans and credit stress tests
 - Receives reports on liquidity and market risk positions (VaR)
 - Receives updates on operational risk management
 - Receives updates on cyber risks
 - Receives updates on strategic risks
 - Receives reports on changes to credit approvals or extension processes, credit risk measurement, market risk measurement and risk control measures
 - Receives updates on retail banking risks

NOMINATION & REMUNERATION COMMITTEE

The principal objective of the Committee is to help the Board in ensuring that the Bank's remuneration levels remain competitive for GIB to continue to attract, retain and motivate competent staff to achieve the strategy and objectives of the Bank. The responsibilities of the Committee, as stated in its mandate, also include, but are not limited to, the following.

Nomination matters:

- 1 Assessing the skills and competencies required on the Board, the Committees of the Board, and Senior Management
- 2 Assessing from time to time the extent to which the required skills are represented on the Board and Senior Management
- 3 Establishing processes for reviewing the performance of individual Directors and the Board as a whole
- 4 Establishing processes for reviewing the performance of individual Senior Executives and Senior Management as a whole
- 5 Overseeing Directors' corporate governance educational activities
- 6 Establishing processes for the identification of suitable candidates for Senior Management, and identifying and recommending individuals qual fied to become members of Senior Management
- 7 Establishing a succession plan for Senior Management

Remuneration matters:

Reviewing and making recommendations to the Board in respect of $\ensuremath{^{\circ}}$

- 1 The executive remuneration and incentive policy which includes the fixed and variable remuneration for approved persons, and material risk-takers
- 2 Policies relating to recruitment, retention, performance measurement and termination for the Directors, Group CEO and Senior Management
- 3 Approve, monitor and review the remuneration system to ensure the system operates as intended
- 4 Approve the remuneration amounts for each approved person and material risk-taker, as well as total variable remuneration to be distributed, taking account of total remuneration including salaries, fees, expenses, bonuses and other employee benefit
- 5 Review the stress testing and back testing results before approving the total variable remuneration to be distributed, including salaries, fees, expenses, bonuses and other employee benefits.

Corporate governance report (continued)

CORPORATE GOVERNANCE COMMITTEE

The role of the Committee is to assist the Board in shaping and monitoring the corporate governance policies. Its responsibilities include

- 1 Overseeing the development and maintenance of corporate governance policies
- 2 Monitoring the Bank's compliance with regulatory requirements relating to corporate governance
- 3 Reviewing mandates and performance evaluations of the Board and its Committees, and recommend to the Board any improvements deemed necessary or desirable to the mandates
- 4 Reviewing classification of individual Directors, and declaration of Directors and members of Senior Management regarding their outside activities and interests to detect the whether any conflict of interest exists, and take appropriate steps in that regard
- 5 Overseeing the Bank's public reporting on corporate governance matters

INNOVATION COMMITTEE

The role of the Committee is to assist the Board in its responsibilities by overseeing and advising on the Bank's innovation and digitisation agenda, including but not limited to, innovation and digital banking strategy, and innovation portfolio. Its responsibilities include

- 1 Support the Management as a sounding board
- 2 Review and recommend to the Board the approval of the Bank's innovation strategy and operating model that has been presented by Management. Review and discuss significant concepting innovation and technology endated issues and trends.
- 3 Provide guidance and support in managing the organisation's cultural challenges
- 4 Oversee Management's development and implementation of the Bank's innovation strategy, and its alignment with the Bank's overall strategic objectives, including (i) Bank's progress in implementing its innovation pipeline, and (ii) post implementation results of all key innovations, including the achievement of executed conditations of some zero and including the conditation.

EVALUATION OF THE BOARD OF DIRECTORS

The mandates of the Corporate Governance and the Nomination & Remuneration Committees, as well as the Board Chaiter, reflect the requirement that the Board must conduct an evaluation of its performance, the performance of each Committee, and of each individual Director, at least annually

The Board reviewed independent performance reports from each of its Committees as well as a report on its own performance, by evaluating the major activities undertaken during the year in comparison with the respective mandates. The evaluation of individual Directors included measurable rating scales, self-evaluations and the Chairman's input. A report on the evaluations conducted each year is also provided to Shareholders at each AGM.

INDUCTION & THE CONTINUING EDUCATION OF DIRECTORS

The Board and its Committees regularly receive updates on key developments in the regulatory and other areas that fall under their responsibilities

The Board also stresses the importance of providing training and development opportunities for the Directors. The Board has passed a resolution to encourage Directors to seek any training they deem necessary (with the Bank bearing the expenses of such training), and the Directors are frequently briefed on the availability of training opportunities.

On 20-21 October 2018, the Bank's Corporate Governance Unit, in collaboration with the Senior Management Team, held thorough and comprehensive Board Induction sessions as part of the process of educating the newly-appointed Board members on the Bank's strategy, culture and performance

Corporate governance report (continued)

MANAGEMENT

The Senior Management team is responsible for the day-to-day management of the Bank entrusted to it by the Board. It is headed by the Group CEO, who is assisted by the Group Chief Financia. Officer. Group Chief Risk Officer, Group Chief Derating Officer, Group Wholesale Banking Head, Retail Banking Head, Group Chief Investment and Treasury Officer, Group Head of Compliance & Governance, and Group Human Resources Officer. The biographies of the key members of the Senior Management team are set out on page 60 of this Annual Report.

The following $1^{\rm st}$ level management committees assist the Group CEO in the management of the Bank

- 1 Management Committee
- 2 Group Risk Committee
- 3 Assets and Liabilities Committee (ALCO)
- 4 Job Evaluation Committee
- 5 Information Security Management Committee
- 6 Operational Risk Committee
- 7 Tender Review Committee
- 8 Credit Committee
- 9 Strategy Execution Committee
- 10 Change Control Board
- 11 Investment Committee

These Committees derive their authorities from the Group CEO, based on the authorities and limits delegated by the Board

In fulfilling its principal responsibility for the day-to-day management of the Bank, the Senior Management team is required to implement Board, approved policies and effective controls, within the strategy and objectives set by the Board

Letters of appointment are issued to members of the Senior Management team setting out their specific responsibilities and accountabilities that include assisting with and contributing to the following

- 1 Formulation of the Bank's strategic objectives and direction
- 2 Formulation of the Bank's annual budget and business plan
- 3 Ensuring that high-level policies are in place for all areas, and that such policies are fully applied
- 4 The setting and management of risk/return targets in line with the Bank's overall risk appetite
- 5 Determining the Bank's overall risk-based performance measurement standards
- 6 Reviewing business units' performance and initiating appropriate action

- 7 Ensuring that the Bank operates to the highest ethical standards, and complies with both the letter and spirit of the law, applicable regulations and codes of conduct
- 8 Ensuring that the Bank is an exemplar of good business practice and customer service

Their attention is also drawn to the fact that these obligations are in addition to their specific functional responsibilities and objectives, and those set out in the Bank's Corporate Policy Manual

REMUNERATION

The Bank's total compensation policy, which includes the variable remuneration policy, sets out GIB's policy on remuneration for Directors and Senior Management, and the key factors that were taken into account in setting the policy

The Bank adopts Sound Remuneration Practices in accordance with CBB requirements. The Board approved the framework and incentive components, and obtained Shareholders' approval at the 2015 AGM. The key features of the remuneration framework are summarised below.

Remuneration strategy

The Bank's basic compensation philosophy is to provide a competitive level of total compensation to attract, retain and motivate qualified and competent employees. The Bank's variable remuneration policy is driven primarily by a performance-based culture that aligns employee interests with those of the Shareholders of the Bank. These elements support the achievement of set objectives through balancing reward for both short-term results and long-term sustainable performance. The strategy is designed to share its success and to align employees' incentives with the risk framework and risk outcomes.

The quality and long-term commitment of all employees is fundamental to the success of the Bank. The Bank therefore aims to attract, retain and motivate the very best people who are committed to maintaining a career with the GIB, and who will perform their role in the long-term interests of Shareholders. The Bank's reward package comprises the following key elements.

- Fixed pay
- Benefits
- Annual performance bonus
- Deferred bonus share plan

A robust and effective governance framework ensures that the Bank operates within clear parameters of its compensation strategy and policy. All compensation matters, and overall compliance with regulatory requirements, are overseen by the Nomination and Remuneration Committee of the Board (NRC).

Corporate governance report (continued)

The Bank's remuneration policy, in particular, considers the role of each employee, and has set guidance depending on whether an employee is a Material Risk Taker and/or an Approved Person in business line, control or support functions. An Approved Person is an employee whose appointment would require prior regulatory approval because of the significance of the role within the Bank, and an employee is considered a Material Risk Taker if they head up significant business lines and any individuals within their control have a material impact on the Bank's risk profile

To ensure alignment between what is paid to employees and the business strategy, GIB assesses Bank-wide, divisional and individual performance against annual and long-term financial and for financial subjectives. Some and on the with the business planning and performance management process. This takes into account adherence to the Bank's values, risk and compliance measures and, above all, acting with integrity. Altogether, performance is therefore judged not only on what is achieved over the short- and long-term, but also importantly on how it is achieved, as the latter contributes to the long term sustainability of the business.

NRC role and focus

The NRC has oversight of all reward policies for the Bank's employees. The NRC is the supervisory and governing body for compensation policy, practices and plans. It is responsible for determining, reviewing and proposing variable remuneration policy for approval by the Board It is responsible for setting the principles and governance framework for all compensation decisions. The NRC ensures that all persons must be remunerated fairly and responsibly. The remuneration policy is reviewed on a periodic basis to reflect changes in market practices and the European and is k profile of the Bank.

The aggregate remuneration paid to the NRC members during the year in the form of sitting fees amounted to US\$36,000 [2017 US\$54,000]

Scope of application of the remuneration policy

The principles of this remuneration policy apply on a Group wide basis. However, application of deferral requirements and issue of non-cash instruments for foreign branches and subsidiaries of the Bank is determined by applicable local regulations and market norms.

Board remuneration

The Bank's board remuneration is determined by its Shareholders in line with its Articles of Association. The compensation is linked to actual attendance of meetings. The structure and level of the compensation for the members of the Board are approved by the AGM, and consist of the following.

- Atte dance fees payable to melebers ittending different Board-related Committee meetings
- Allowance to cover travelling, accommodation and subsistence, while attending Board and related Committee meetings
- A pre-defined fixed amount representing an armudi remuneration fee

In 2018, the aggregate remuneration paid to Board members and key Management was US\$14.4 million [2017. US\$13.5 million] of which US\$2.6 million [2017. US\$2.3 million] was paid to the Board members.

Variable remuneration for staff

The variable remuneration is performance related and consists primarily of the annual performance bonus award. As a part of the staff's variable remuneration, the annual bonus reward consists of delivery of operational and financial targets set each year, the individual performance of the employees in achieving those targets, and their contribution to delivering the Bank's strategic objectives.

The Bank has adopted a Board-approved framework to develop a transparent link between variable remuneration and performance. The framework is designed on the basis that the combination of meeting both financial performance and achievement of other non-financial factors would, all other things being equal, deliver a target bonus pool for the employees, prior to consideration of any allocation to business lines and employees individually. In the framework adopted to determine the variable remuneration pool, the NRC aims, to balance the distribution of the Bank's profits between Shareholders and employees.

The key performance metrics at the Bank level include a combination of short-term and long-term measures, and metric positionality solvency, liquidity and growth indicators. The performance management process ensures that all goals are appropriately cascaded down to respective business units and employees.

In determining the amount of variable remuneration, the firm a toris from setting specific targets, estimations, market or matable bottoms up, setting a profit target and other qualitative performance measures that would result in a target top down bonus pool. The bonus pool is then adjusted to take account of risk via the use of risk-adjusted measures.

Corporate governance report (continued)

The NRC carefully evaluates practices by which remuneration is paid for potential future revenues whose timing and likelihood remain uncertain. The NRC demonstrates that its decisions are consistent with an assessment of the Bank's financial condition and future prospects.

The Bank uses a formalised and transparent process to adjust the bonus pool for quality of earnings. It is the Bank's objective to pay out bonuses out of realised and sustainable profits. If the quality of earnings is not strong, the profit base could be adjusted based on the discretion of the NRC.

For the Bank to have any funding for distribution of a bonus pool, thresholds of financial targets have to be achieved. The performance measures ensure that the total variable remuneration is generally considerably contracted where subdued or negative financial performance of the Bank occurs. Furthermore, the target bonus pool, as determined above, is subject to risk adjustments in line with the risk adjustment and linkage framework.

Remuneration of control functions

The remuneration level of staff in the control and support functions allows the Bank to employ qualified and experienced personnel in these functions. The Bank ensures that the mix of fixed and variable remuneration for control and support function personnel is weighted in favour of fixed remuneration. The variable remuneration of control functions is based on function-specific objectives, and is not to be determined by the individual financial performance of the business area they monitor.

The Bank's performance management system plays a major role in deciding the performance of the support and control units on the basis of the objectives set for them. Such objectives are more focused on non-financial targets that include risk, control, compliance and ethical considerations, as well as the market and regulatory environments, apart from value, adding tasks which are specific to each unit.

Variable remuneration for business units

The variable remuheration for the business units is primarily decided by the key performance objectives set through the performance management system of the Bank-Such objectives contain financial and non-financial targets, including risk control, compliance and ethical considerations, as well as the market and regulatory environments

Risk assessment framework

The risk assessment framework of GIB aligns variable remuneration to the risk profile of the Bank, and a so ensures that the remuneration policy reduces employees' incentives to take excessive and undue risk. The Bank considers both quantitative measures and qualitative measures in the risk assessment process, and risk adjustments are applied to ensure that the Bank's remuneration policies are aligned to its risk appetite.

The NRC considers whether the variable remuneration policy is in line with the Bank's risk profile, and ensures that through the ex-ante and ex-post risk assessment framework and processes, remuneration practices where potential future revenues, whose timing and likelihood remain uncertain, are carefully evaluated

Risk adjustments consider all types of risks, including intangible and other risks such as reputation risk, liquidity risk and the cost of capital. The Bank undertakes risk assessment to review financial and operational performance against the business strategy and risk performance, prior to distribution of the annual bonus. GiB ensures that total variable remuneration does not limit its ability to strengthen its capital base.

The bonus pool considers the performance of the Bank, which is considered within the context of its risk management framework. This ensures that the variable pay pool is shaped by risk considerations and Bank-wide notable events.

The size of the variable remuneration pool and its allocation within the Bank considers the full range of current and potential risks, including

- The capital required to support the risks taken
- The level of liquidity risk assumed in the conduct of business
- Consistency with the timing and likelihood of potential future revenues incorporated into current earnings

The NRC keeps itself abreast of the Bank's performance against the risk management framework. The NRC will use this information when considering remuneration to ensure that return, risk and remuneration are aligned.

Corporate governance report (continued)

Risk adjustments

The Bank has an ex-post risk assessment framework, which is a qualitative assessment to back-test actual performance against risk assumptions

In years where the Ball k suffers that enablesses note from collapse formance, the risk adjustment framework would work as follows: $\frac{1}{2} \frac{1}{2}

- There would be considerable contraction of the Bank's total variable remuneration
- At the individual level, poor performance by the Bank would mean individual KPIs are not met, and hence employee performance ratings would be lower
- · Reduction in value of deferred shares or awards
- Possible changes in vesting periods, and additional deferral applied to unvested rewards
- Lastly, if the qualitative and quantitative impact of a loss incident is considered significant, a malus or clawback of previous bonus awards may be considered

The NRC, with Board approval, can rationalise and make the following discretionary decisions

- Increase/ reduce the ex-post adjustment
- Consider additional deferrals or increase in the quantum of share awards
- · Recovery through malus and clawback arrangements

Malus and clawback framework

The Bank's malus and clawback provisions allow the NRC to determine that, if appropriate, unvested elements under the deferred bonus plan can be forfeited/adjusted, or the delivered variable remuneration could be recovered in certain situations. The intention is to allow the Bank to respond appropriately if the performance factors, on which reward decision, were based trim out not correct the corresponding performance in the longer term. All deferred remuneration awards contain provisions that enable the Bank to reduce or cancel the awards of employees whose individual behaviour has had a materially detrimental impact on GIB during the concerned performance year. Any decision to take back an individual's award can only be taken by the NBC.

The Bank's malus and clawback provisions allow the Board to determine that, if appropriate, vested/unvested elements under the deferred bonus plan can be adjusted/cancelled in certain situations. These events include, but are not limited to, the following

- Reasonable evidence of misbehaviour or material error by the employee causing harm to the Bank's reputation, or where the employee's actions have amounted to misconduct, incompetence or negligence
- The employee's business unit suffers a material downturn in its financial performance, or a material risk management failure, or a material restatement of the financial statements of the Bank
- The employee deliberately misleads the market and/or Shareholder in relation to the financial performance of the Bank
- A significant determination in the financial health of the Bank, or the relevant line of business incurring losses

Clawback can be used if the malus adjustment on the univested persons insufficient, given the nature and magnitude of the issue

Components of variable remuneration

Variable remuneration has following main components

Upfront cash

The portion of the variable remuneration that is awarded and paid out in cash on conclusion of the performance evaluation process for each year

Deferred cash

The portion of variable remuneration that

is awarded and paid in cash on a pro-rata basis over a period of 3 years

Upfront share awards The portion of variable remuneration that is awarded and issued in the form of shares on conclusion of the performance evaluation process for each year

Deferred shares The portion of variable remuneration that is awarded and paid in the form of shares on a pro-rata basis over a period of 3

years

All deferred awards are subject to malus provisions. All share a said and released to the her of the chiral operation as ix month retention period from the date of vesting. The number of equity share awards is linked to the Bank's share price as per the rules of GIB's Share Incentive Scheme. Any dividend on these shares is released to the employee, along and these has a girl after the recent on proceed.

Corporate governance report (continued)

Deferred remuneration

All employees at the grade of Senior Vice-President (SVP) and higher shall be subject to deferral of variable remuneration as follows

Allocation of variable remuneration

	Group CEO, MDs and the					
Element of variable remuneration	5 most highly-paid business line employees	SVP and higher	Deferral period	Retention	Malus	Clawback
Upfront cash	40%	50%	None	-	-	Yes
Upfront shares	-	10%	None	6 months	Yes	Yes
Deferred cash	10%	=	3 years*	-	Yes	Yes
Deferred share awards	50%	40%	3 years*	6 months	Yes	Yes

^{*} The deferral vests on a pro-rata basis over a 3-year period

The NRC, based on its assessment of role profiles and risk taken by an employee could increase the coverage of employees that would subject to deferral arrangements

Corporate governance report (continued)

CORPORATE COMMUNICATIONS

The Bank has in place a Corporate Communications Strategy which ensures that the disclosures made by GIB are fair, transparent, comprehensive and timely, and reflect the character of the Bank and the nature, complexity and risks inherent in its business activities. Main communications channels include the website, annual report, corporate brochures, staff newsletters, and announcements in the appropriate media.

This transparency is also reflected in the Bank's website (www.gib.com) which provides substantial information on the Bank, including its profile and milestones vision, mission, values, strategy and objectives, its financial statements for the last five years at least, and its press releases.

CODE OF CONDUCT

The Bank's website also contains the Board-approved Code of Conduct (Code) that contains rules on conduct, othics and on avoiding conflicts of interest, applicable to all employees and Directors of the Bank. The Code is designed to guide all employees and Directors through best practices to fulfil their responsibilities and obligations towards the Bank's stakeholders (Shareholders, clients, staff, regulators, suppliers, the public, and the host countries in which the Bank conducts business, etc.), in compliance with all applicable laws and regulations.

The Code addresses such issues as upholding the law and following best practices, acting responsibly, honestly, fairly and othically, avoiding conflicts of interest, protecting Bank property and data protecting client-confidential information and safeguarding the information of others, complying with inside information rules and with the prohibition on insider trading; preventing money laundering and terrorism financing, rejecting bribery and corruption, avoiding compromising gifts, as well as speaking up and 'whistle blowing'

All employees and Directors of the Bank are reminded every year of their obligations under the Code by means of an email from the Bank that includes a copy of the Code (in English and Arabic), and everyone is required to sign an Acknowledgment and Declaration confirming that they have received and read the Code and understand its requirements, have followed and will continue to follow these requirements, and agree that if they have any concern about any possible misconduct or breach of the Code, they will raise the concern with the appropriate persons within the Bank as per the Code

In addition, all employees of the Bank must sign an annual Declaration on outside employment and other activities, to ensure that no conflicts of interest exist. These Declarations are addressed to the Bank's Human Resources department Similarly, all Directors and members of the Management Committee must complete and sign a similar annual Declaration, addressed to the Corporate Governance Committee of the Board

DISCLOSURES

The Bank's website also provides access to GIB's annual reports, and all the information contained in these reports is therefore accessible globally. The information includes Management discussion on the business activities of the Bank, as well as discussion and analysis of the financial statements and risk management. The financial information reflects the latest International Financial Reporting. Standards that were applicable for adoption in 2018.

The Board-approved Disclosure Policy is in accordance with the requirements of Basel III Pillar 3, in compliance with CBB rules. The objective of this policy is to ensure transparency in the disclosure of the financial and risk profiles of the Bank to all interested parties.

POLICY ON CONNECTED COUNTERPARTIES

The Board-approved Policy on Connected Counterparties governs GIB's dealings with such parties. The policy defines which parties are considered to be connected with GIB within the criteria set by the CBB, and imposes not only the limitations placed by the CBB but also additional criteria imposed by GIB. The policy sets out the internal responsibilities for reporting GIB's connected counterparties exposures to the CBB, and the disclosures to be made in GIB's financial statements and annual reports, in line with applicable disclosure requirements.

POLICY ON RELATED PARTY TRANSACTIONS

GIB has a Board-approved Code of Conduct which governs the conflict of interests and related party transactions. The Bank's dealings with its Shareholders are conducted on an arms-length basis in respect of its exposure to and deposits received from them. If loans are extended to related parties, these are approved on the basis of authorities delegated by the Board to the Group CEO. If the loans exceed these authorities, then further approval from the Executive Committee or the Board is requested. The Bank will not deal with any of its Directors in a lending capacity. It should be noted that Article 16 of the Articles of Association prevents Directors of the Bank from having any interest, directly or indirectly, in any contract with the Bank.

All loans to Senior Management members (including the Group CEO and his direct reports), as well as staff of GIB, are governed by the policies applicable to staff. These policies are reviewed by the Nomination & Remuneration Committee of the Board at least annually. All dealings with companies associated with a GIB Director or member of the Senior Management are referred to the Board for approval.

Corporate governance report (continued)

MATERIAL TRANSACTIONS THAT REQUIRE BOARD APPROVAL

The Bank has delegated credit authority to the Group CEO based on a risk-rating matrix. When considering transactions, any exposure to an entity that exceeds the Group CEO's limit will require the approval of the Board Executive Committee or the Board.

COMPLIANCE

The Compliance frame work adopted by the Board reflects the principles for promoting sound compliance practices at GIB. It also demonstrates the Bank's adherence to applicable legal and regulatory requirements, and to high professional standards. The role of the Compliance function is to assist Senior Management in ensuring that the activities of GIB and its staff are conducted in conformity with applicable laws and regulations, and generally with sound practices pertinent to those activities. The Group Head of Compliance & Corporate Governance, who reports directly to the Group CEO, also has access to the Board through the Audit & Corporate Governance Committees, if required

Compliance risk is the risk of legal or regulatory sanctions, material financial loss or damage to the legalation of the Bank arising from failure to comply with the requirements of applicable laws, rules, regulations and related self-regulatory organisations' standards and codes of conduct (collectively, applicable laws, rules and regulations). Group Compliance independently assesses compliance risk and evaluates the business and control units for adherence to applicable laws, rules and regulations, including identifying compliance issues and risks, performing independent spot checks, and reporting on the state of compliance activities across the Bank.

The Bank's approach to the management of compliance risk is described in the Group Compliance Policy, which outlines the requirements of the Bank's group compliance programmer and defines roles and responsibilities of Board, Senior Management, Business and Control units, Internal Audit, and the three lines of defence in managing compliance risk. The requirements work together to drive a comprehensive risk based approach for the proactive offert frequency and instrugements. But on of compliance risks throughout the Bank.

The Group Compliance Policy also sets the requirements for reporting compliance risk information to Executive Management as well as the Board or appropriate Board level committees in support of Group Compliance responsibility for conducting independent oversight of the Bank's compliance risk management activities. The Board provides oversight of compliance risk mainly through its Audit Committee and the Corporate Governance Committee.

In ensuring that the tone emanates from the top, the Group CEO issues a yearly message to all of GIB employees reminding everyone of the importance of complying with all laws and regulations applicable to GIB's operations. Good compliance behaviour is also rewarded by having it as a mandatory measurement criterion in staff evaluations.

During 2018, the Bank was penalised by the CBB due to failure in complying with the deadline submission requirement under the Reporting Requirements Module, section BR-4A 2 "Internet Security Measures" for the required activity under the Operational Risk Management section OM 6.2 "Internet Security for all Banks". The amount of the Financial Penalty imposed was BD 800 (US\$1,122) for each day of late filing pagregating to 8D 6.400 (US\$16,576).

This statement in the Annual Report is being made to fulfill CBB requirements under Public Disclosure Module section PD-1 3 37, and the Enforcement Module sections EN-6 1 3 & EN-1 3 3

ANTI-MONEY LAUNDERING

The Bank's current Anti-Money Laundering and Combating the Financing of Terrorism (AML/CFT) procedures and guidelines conform to the legal and regulatory requirements of the Kingdom of Bahrain. These legal and regulatory requirements to the Kingdom of Bahrain. These legal and regulatory requirements to largely reflect the FATE recommendations on Money Laundering. GIB's AML/CFT procedures and guidelines apply to all of the Bank's offices branches and subsidiaries, wherever located. In addition, the GIB entities located outside Bahrain are subject to the laws and requirements of the jurisdictions where they operate, and if local standards differ, the higher standards apply.

Systems are in place to ensure that business relationships are commenced with clients whose identity and activities can reasonably be established to be legitimate, to collect and record all relevant client information, to monitor and report suspicious transactions, to provide periodic AML/CFT training to employees, and to review with external auditors the effectiveness of the AML/CFT procedure and control. The Bank's AML/CFT procedures prohibit dealing with shell by Kr. A proactive fructive of orfice six implace to ensure Group-wide compliance with AML/CFT procedures, and dictionary polare. (b) as mentorical tithic beaser in regulatory requirements. This structure consists of the Group Head of Compliance and the Group Money Laundering reports g Officer, \$10.80 and Deputy is a PO.

Corporate governance report (continued)

CORPORATE GOVERNANCE FRAMEWORK – INTERNAL AUDIT REVIEW

The Internal Audit review of the Bank's Corporate Governance framework is conducted annually as a separate project since the introduction of the Corporate Governance Rules in 2010. Accordingly, the latest audit was undertaken in October 2017. The purpose of the audit was to provide a level of assurance about the processes of corporate governance within the Bank. The scope of the audit included reviewing the existing policies, procedures and current practices followed by GIB in light of the rules contained in the HC Module of the CBB Rulebook.

The overall conclusion of the audit was that the Corporate Governance framework of GIB appears to be operating effect vely, and is providing a sound framework to control the risks inherent in GIB's current business activities

STATUS OF COMPLIANCE WITH THE CBB RULES (MODULE HC)

GIB complies with the CBB rules on Corporate Governance outlined in Module HC of the CBB Rulebook, and instances of non-compliance in 2018 are explained as follows

- Conflict with GIB's Agreement of Establishment & Article of Association, mainly in connection with the remuneration of Directors in Module HC-5 5 2, HC-5 5 4 and HC-5 5 5
- Module HC-5 4 37 regarding the variable remuneration not being applicable to GIB due to the adoption of the phantom shares scheme for deferred bonuses
- Module HC-6 6 33 related to risk management framework. The Bank is in the process of concluding an external review exercise in order to obtain a satisfactory report that the Bank's Risk Management policies are in compliance with CBB regulations.

Under Article 2 of GIB's Agreement of Establishment approved by Decree Law No. (30) for the year 1975 (as amended from time to time) (the Agreement of Establishment), GIB is subject to the Agreement of Establishment and its AoA (together the GIB Constitutional Documents), and in the event of any conflict between the GIB Constitutional Documents and the internal law of the Kingdom of Bahrain, the terms of the Constitutional Documents shall prevail. As a result, certain Corporate Governance requirements under HC-1, HC-4 and HC-5 that are in conflict with the AoA such as the nomination of Directors, the attendance requirements for Directors, the prohibition against proxies at Board Meetings, and the Board of Directors total remuneration, have not been adopted

Independent auditors' report to the shareholders of Gulf International Bank B.S.C.

Report on the Audit of the Consolidated Financial Statements

Opinion

We have audited the accompanying consolidated financial statements of Gulf International Bank B S C. (the 'Bank') and its subsidiaries (together the 'Group') which comprise the consolidated statement of financial position as at 31st December 2018, and the consolidated statements of income, comprehensive income, changes in equity and cash flows for the year then ended, and notes to the consolidated financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the consolidated financial position of the Group as at 31st December 2018, and its consolidated financial performance and consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards ("IFRS")

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing ("ISA") Our responsibilities under those standards are further described in the Auditor's responsibilities for the audit of the consolidated financial statements section of our report. We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants ("IESBA Code"), and we have fulfilled our other ethical responsibilities in accordance with the IESBA Code. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements for the year ended 31° December 2018. These matters were addressed in the context of our audit of the consolidated financial statements as a whole and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context

We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the consolidated financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the consolidated financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying consolidated financial statements.

1. Impairment of loans and advances under IFRS9

Key audit matter

The Group exercises significant judgment using subjective assumptions over both when and how much to record as loan impairment, and estimation of the amount of the impairment provision for loans and advances

Loans and advances form a major portion of the Group's assets, and due to the significance of the judgments used in classifying loans and advances into various stages stipulated in IFRS 9 and determining related provision requirements, this audit area is considered a key audit risk

As at 31st December 2018, the Group's gross loans and advances amounted to US\$ 10,5817 million and the related impairment provisions amounted to US\$ 7639 million, comprising US\$ 140 6 million of provision against Stage 1 and 2 exposures and US\$ 623.3 million against exposures classified under Stage 3. The impairment provision policy is presented in the accounting policies, and in Note 27 to the consolidated financial statements.

How the key audit matter was addressed in the audit

- We gained an understanding of the Group's key credit processes comprising granting, booking, monitoring and provisioning and tested the operating effectiveness of key controls over these processes,
- We read the Group's IFRS 9 based impairment provisioning policy and compared it with the requirements of IFRS 9 as well as relevant regulatory guidelines and pronouncements, and
- We assessed the soundness of the Group's loan grading processes

Stage 1 and Stage 2 Provisions:

- For the provision against exposures classified as Stage 1 and Stage 2, we obtained an understanding of the Group's provisioning methodology, the underlying assumptions and the sufficiency of the data used by management
- We obtained an understanding of the Group's internal rating model for loans and advances. We have read the annual external validation report on the internal rating model to assess the appropriateness of the rating model,
- We checked the appropriateness of the Group's determination
 of significant increase in credit risk and the resultant basis for
 classification of exposures into various stages.

Independent auditors' report to the shareholders of Gulf International Bank B.S.C. (continued)

Report on the Audit of the Consolidated Financial Statements (continued)

Key audit matters (continued)

1. Impairment of loans and advances under IFRS9 (continued)

Key audit matter

How the key audit matter was addressed in the audit

- For forward looking assumptions used by the Group in its Expected Credit Loss ("ECL") calculations, we held discussions with management and corroborated the assumptions using publicly available information,
- For a sample of exposures, we checked the appropriateness of the Group's staging,
- For Probability of Default ("PD") used in the ECL calculations we checked the Through the Cycle ("TTC") PDs with external published data and checked the appropriateness of conversion of the TTC PDs to Point in Time PDs,
- We checked that the Loss Given Default used by the Group's management in the ECL calculations are those approved by the Group Risk Committee,
- For a sample of exposures, we checked the appropriateness of determining Exposure at Default, including the consideration of propayments and repayments in the sesti fews and the resultant arithmetical calculations,
- We checked the completeness of loans and advances and credit related contingent items included in the ECL calculations as of 31 ¹ December 2018,
- We involved Risk and Information System specialists to verify the appropriateness of the model and data integrity, and
- We assessed the financial statement discosures to cusure compliance with IFRS 9 Refer to the accounting policies, critical accounting estimates and judgments, disclosures of loans and advances and credit risk management in notes 2–3, 10 and 27 respectively to the consolidated financial statements

Stage 3 (Specific) Provisions:

 For a sample of exposures determined to be individually impaired, we obtained an understanding of the latest developments in the counterparty's situation and examined manages, into eleminate of future cash lower and coche the resultant provision calculations.

For each exposure in the sample selected, we're performed the provision calculation by considering the appropriateness of the management assumptions used and where possible benchmarked the provision held to that across industry

Independent auditors' report to the shareholders of Gulf International Bank B.S.C. (continued)

Report on the Audit of the Consolidated Financial Statements (continued)

Other information included in the Group's 2018 Annual Report

Other information consists of the information included in the Group's 2018 Annual Report, other than the consolidated financial statements and our auditor's report thereon. The Board of Directors is responsible for the other information. Prior to the date of this auditor's report, we obtained the Chairman's Statement which will form part of the annual report, and the remaining sections of the annual report are expected to be made available to us after that date.

Our opinion on the consolidated financial statements does not cover the other information and we do not express any form of assurance conclusion thereon

In connection with our audit of the consolidated financial statements our responsibility is to read the other information identified above when it becomes available and in doing so consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed on the other information obtained prior to the date of the auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard

Responsibilities of the Board of Directors for the consolidated financial statements

The Board of Directors is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with IFRS and for such internal control as the Board of Directors determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error

In preparing the consolidated financial statements, the Board of Directors is responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so

Auditor's responsibilities for the audit of the consolidated financial statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As part of an audit in accordance with ISA, we exercise professional judgment and maintain professional skepticism throughout the audit. We also

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud
 or error, design and perform and tiprocedures responsive to those risks, and obtain audit evidence that is sufficient and
 appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is
 higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations,
 or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circum stances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors
- Conclude on the appropriateness of the Board of Directors' use of the going concern basis of accounting and, based on the
 audit evidence obtained whether a material uncertainty exists related to events or conditions that may cast significant
 doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are
 required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements or, if
 such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to
 the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going
 concern.

Independent auditors' report to the shareholders of Gulf International Bank B.S.C. (continued)

Report on the Audit of the Consolidated Financial Statements (continued)

Auditor's responsibilities for the audit of the consolidated financial statements (continued)

- Evaluate the overall presentation, structure and content of the consolidated financial statements, including the disciosures, and whether the consolidated financial statements represent the underlying transactions and events in a mariner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Croup to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the Group audit. We remain solely responsible for our audit opinion.

We communicate with the Group's Audit Committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings including any significant deficiencies in internal coultry that we identify during our audit

We also provide the Group's Audit Committee with a statement that we have complied with relevant ethical requirements regarding independence, and communicate to them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards

From the matters communicated with the Group's Audit Committee, we determine those matters that were of most significance in the audit of the consolidated in ancial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would leaso, ably be expected to outweigh the public interest period to of such communication.

Report on Other Legal and Regulatory Requirements

As required by the Bahrain Commercial Companies Law and Volume 1 of the Central Bank of Bahrain (CBB) Rule Book, we report that

- a) the Bankhits maintained proper accounting records and the consolidated financial statements are may demont the rewith
- b) the financiatin formation contained in the Charman in Statement is consistent with the consolidated financial staic ments
- c) we are not aware of any violations of the Bahrain Commercial Companies Law, the Central Bank of Bahrain and Financial Institutions Law, the CBB Rule Book (Volume 1 and applicable provisions of Volume 6) and CBB directives, or the terms of the Bank's memorandum and articles of association during the year ended 31. December 2018 that might have had a material diverse effection, be basiness of the Bank or on its consolidated financial, position and
- d) satisfactory explanations and information have been provided to us by management in response to all our requests

IFRS 15 - Revenue from contracts with customers

IERS 15 introduces a new five step nicidel fran ework for determining whether how much and will enrevenue is recognised IERS 15 has been applied retrospectively and has been indicated in an action. If in praction the Group's consolidated financial statements Contracts with customers impacted by the new standards are summarised below -

Interest income and management fees

Interest income and management focs are recognised using to defective interest rate method over the contral toal life of the facility. Fees, including low longination fees and early redement on fees, are not ided in the calculation of the effective interest rate to the extendity are considered to be an integral part of the effective interest rate, and are innortised on a straight-line basis. As part of the Group's internal policies, interest income and the amortisation of management fees are suspended when either interest or principal is overdue. There is no material impact on the recognition of interest income or management fees resulting from the application of this standard.

Commissions on letters of credit and guarantee and related advising fees

Revenue earned from the arrangement of letters of credit or guarantee is recognised as the services are performed or roce ved. Commissions on letters of credit at diseaser fees are recognised after the transfer of services, while there is no letters of guarantee are amortised over the life of the guarantee. There is no material impact on the recognition of letters of credit or guarantee or related fees from the application of this standard.

Investment banking fees

Investment carbonices compare thesis cature to the province of final cubiscives or delivating activities are received by to the order that engine states are initial postic careful and margers are equivalent for contract involving mortiple phases monthly not influidable retained received and received and received and the contract. The Group is also entitled to advisory fees upon the completion of the transactions, which are only recognised at the end of the contract. There is no material impact on the recognition of investment banking fees resulting from the application of this standard.

Accounting policies (continued)

2.3 Foreign currencies

The consolidated financial statements are presented in US Dollars, representing the Group's functional and presentation currency. Transactions in foreign currencies are converted to US Dollars at the spot rate of exchange prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into US Dollars at market rates of exchange prevailing at the balance sheet date.

2.4 Financial assets and liabilities

Financial assets and liabilities comprise all assets and liabilities reflected in the consolidated statement of financial position, although excluding employee benefit plans and property and equipment

a) Recognition and measurement

The Group recognises financial assets and liabilities in the consolidated statement of financial position when, and only when, the Group becomes party to the contractual provisions of the instrument

 $Financial instruments \ are \ classified \ at inception into \ one \ of the following \ categories, which then \ determine \ the \ subsequent \ measurement \ methodology \ -$

Financial assets are classified into one of the following three categories

- financial assets at amortised cost
- financial assets at fair value through other comprehensive income (FVTOCI) of financial assets at fair value through the profit or loss (FVTPL)

Financial liabilities are classified into one of the following two categories -

- financial liabilities at amortised cost or
- \sim -financial liabilities at fair value through the profit or loss (FVTPL)

Financial assets are initially recognised at fair value including transaction costs aftr butable to the financial asset, with the exception of trade receivables which are recognised at fair value. Financial liabilities are initially recognised at fair value, representing the proceeds received net of premiums, discounts and transaction costs that are directly attributable to the financial liability.

All regular way purchases and sales of financial assets and liabilities classified as EVTPL are recognised on the trade date, i.e. the date on which the Group commits to purchase or sell the financial asset or liability. All regular way purchases and sales of other financial assets and liabilities are recognised on the settlement date, i.e. the date on which the asset or liability is received from or delivered to the counterparty. Regular way purchases or sales are purchases or sales of financial assets that require delivery within the time frame generally established by regulation or convention in the market place.

Subsequent to initial measurement, financial assets and fiabilities are measured at either amortised cost or fair value. The classification and the basis for measurement are subject to the Group's business model for managing the financial assets and the contractual cash flow characteristics of the financial assets, as detailed below -

Einancial assets at amortised cost

Financial assets are measured at amortised cost using the effective interest rate method if -

- the assets are held within a business model whose objective is to hold assets in order to collect contractual cash flows, and
- the contractual terms of the financial assets give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding

If the first criteria is not met, the financial assets are classified and measured at fair value through other comprehensive income (FVTOCI). If both criteria are not met, the financial assets are classified and measured at fair value through the profit or loss (FVTPL).

Additionally even if a financial asset meets the amortised cost criteria, the Group may choose to designate the financial asset at EVTPL Such an election is irrevocable and applicable only if the EVTPL classification significantly reduces a measurement or recognition inconsistency.

Notes to the consolidated financial statements For the year ended 31st December 2018

2. Accounting policies (continued)

2.4 Financial assets and liabilities (continued)

a) Recognition and measurement (continued)

Financial assets at fair value through other comprehensive income (FVTOCI)

At initial recognition, the Group can make an irrevocable election to classify an equity investment that is not held for trading as EVTOCI

For this purpose la financial asset is deemed to be held for trading if the equity investment meets any of the following conditions -

- it has been acquired principally for the purpose of selling in the near term,
- orient a recognition it is part of a portfolio of identified friancial instruments that are managed together and for which
 there is existence of a recent actual pattern of short term profitability or
- in is a derivative and not designated and effective as a hedging instrument or a financial guarantee

The irrevocable election is on an instrument by-instrument basis. If an equity investment is designated as FVTOCI, all gains and losses except for dividend income, are recognised in other comprehensive income and are not subsequently included in the consolidated statement of income.

Financial assets at fair value through the profit or loss (EVTPL)

Financial assets not otherwise classified above are classified and measured as EVNEL

Financial liabilities at amortised cost

All financial liabilities, other than those classified as financial liabilities at TVTFL are classified as financial liabilities at amostised cost and are measured at amostised cost using the effective interest rate method as described in note 2.7(a).

Financial liabilities at fair value through the profit or loss

Financial liabilities not other vise classified above a classifier as financial liabilities at EVEA. This classification includes derivatives that are liabilities measured at fair value.

b) Modification of assets and liabilities

Financial assets

If the terms of a financial asset are modified, the Group evaluates whether the hash flows of the modified esset are substantially different. If the cash flows are substantially different, he original financial asset is derecognised and a new financial asset is recognised at either amortised cost or fair value if the dash flows are not substantially different, then the prodifical on does not result in derecognition of the financial asset, in this case, the Group revaluates the gross carrying amount of the financial asset, and recognition the amount arising from adjusting the gross carrying amount as a modification gain or loss in the statement of income.

Financial liabilities

To Croup derecopy on a linear of Lability when it itermicale modified and the clesh flows of the modified general substantially different in this case a new mane alliability based on the modified terms is recognised at critical amortised cost of finite linear case between the carrying amount of the mane alliability done agreed and the linear formation of the mane alliability done agreed and the linear formation of the modification is soon agreed in the intermediation of the modification is soon agreed in the intermediation of the modification is soon.

Notes to the consolidated financial statements For the year ended 31th December 2018

2. Accounting policies (continued)

2.5 Impairment of financial assets

Impairment allowances for expected credit losses (ECL) are recognised for financial instruments that are not measured at FVTPL. No impairment loss is recognised on equity investments.

An ECL provision is made at an amount equal to the lifetime ECL, except for the following, for which they are measured as a 12-month ECL -

- debt investment securities that are determined to have a low credit risk (equivalent to investment grade rating) at the reporting date, and
- other financial instruments for which the credit risk has not increased significantly since their initial recognition

The Group classifies its financial instruments into stage 1 stage 2 and stage 3, based on the applied impairment methodology, as described below -

- Stage 1 for financial instruments where there has not been a significant increase in credit risk since initial recognition and that are not credit-impaired on origination, the Group recognises an allowance based on the 12-month ECL
- Stage 2 for financial instruments where there has been a significant increase in credit risk since initial recognition but that are not credit-impaired, the Group recognises an allowance for the lifetime ECL
- Stage 3 for credit-impaired financial instruments, the Group recognises the lifetime ECL

12-month ECL (stage 1) is the portion of ECL that results from probable default events on a financial instrument within 12 months after the reporting date.

Lifetime ECL (stage 2) is a probability weignted estimate of ciedit losses and is determined based on the difference between the present value of all cash shortfalls. The cash shortfall is the difference between all contractual cash flows that are due to the Group and the present value of the recoverable amount, for financial assets that are not credit-impaired at the reporting date.

For stage 3 financial instruments, the provisions for credit-impairment are determined based on the difference between the net carrying arribont and the recoverable amount of the financial asset. The recoverable amount is measured as the present value of expected future each flows, including amounts recoverable from guarantees and collateral, discounted based on the interest rate at the inception of the credit facility or, for debt instruments, at the current market rate of interest for a similar financial asset.

Provisions for credit-impairment are recognised in the consolidated statement of income and are reflected in an allowance account against loans and advances, investment securities, and placements

Financial assets are written off after all restructuring and collection activities have taken place and there is no realistic prospect of recovery Subsequent recoveries are included in other income

Financial assets that are measured at amortised cost are tested as to whether they are credit-impaired. Objective evidence that a financial asset is credit-impaired may include a breach of contract, such as default or delinquency in interest or principal payments, the granting of a concession that, for economic or legal reasons relating to the borrower's financial difficulties, would not otherwise be considered, indications that it is probable that the borrower will enter bankruptcy or other financial reorganisation, the disappearance of an active market or other observable data relating to a group of issets such as adverse changes in the payment status of borrowers or issuers in the group, or economic conditions that correlate with defaults in the group

Financial assets which have been renegotiated or modified are no longer considered to be past due and are replaced on performing status when all principal and interest payments are up to date and future payments are reasonably assured Financial assets subject to individual impairment assessment and whose terms have been renegotiated, are subject to ongoing review to determine whether they remain impaired or should be considered past due. All renegotiated or modified facilities are classified as stage 2 or stage 3 for a minimum period of 12 months from the date of renegotiation. The ECL on renegotiated financial instruments is measured based on whether the terms of renegotiation resulted in the derecognition of an existing asset.

2.6 Offsetting financial assets and liabilities

Tinancial assets and financial liabilities are only off-et and the net amount reported in the consolidated statement of financial position, when there is a legally enforceable right to set off the recognised amounts and there is an intention to settle on a net basis, or to realise the asset and settle the liability simultaneously.

Notes to the consolidated financial statements

For the year ended 31st December 2018

2. Accounting policies (continued)

2.7 Revenue recognition

a) Interest income and interest expense

Interest income and interest expense for all increast-bearing financial useds and traditions except those classified as FN TPL are recognised using the effective interest rate insertion. The effective interest rate method is a method of calculating the amortised cost of a financial asset or liability and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows through the expected life of the mancial asset or liability or, where appropriate, a shorter period, to the net carrying amount of the financial asset or liability. The application of the effective interest rate method has the effect of recognising interest income and interest expense evenly in proportion to the amount outstanding over the period to maturity or repayment.

In calculating the effective interest rate loash flows are estimated taking into consideration all contractual terms of the financial asset or infallity but excluding future credit losses. Fees including loan origination fees and early redemation fees a concluded in the calculation of the effective interest rate to the extent that they are confidered to be an integral part of the effective interest rate.

Interest income is suspended when either interest or principal on a credit facility is overdue by more than 90 days whereupon all unpaid and accrued interest is reversed from income. Interest on non-accrual facilities is included in income only when eccly vide Credit facilities are restored to accrual status only after all cellinquent interest and principal payr, ents have been brought current and future payments are reasonably assured.

b) Fees and commissions

fice, and commissions that are integral to the effective in error timbers a final graft asset or liability are included in the calculation of the effective interest rate.

Other fees and commissions are recognised as the related services are performed or received, and are included in fee and commission income

c) Trading and foreign exchange income

Trading and foreign exchange income arise from earnings generated from customer business and market making, and from changes in fair value resulting from movements in interest and exchange rates, equity prices and other market variables. Changes in fair value and gains and losses arising on the purchase and sale of trading instruments are included in trading income, together with the related interest income, interest expense and dividend income.

d) Dividend income

Dividend income is recognised as follows -

- dividends from equity instruments classified as EVTPL are riceoptised when the right to receive the dividence is established and are included in trading income.
- divider as from equity it surmenus classified as EVTOCL are receptised when the right to receive the dividend is established and are included in other income.

2.8 Securities financing arrangements

Securities purchased under agreements to resell (reverse repurchase agreements) and securities sold under agreements to repurchase (repurchase agreements) are treated as collateralised lending and borrowing transactions and are recorded in the confolidated it terment of triangual boson at the arrow is the securities were initially acquired or sold lateralised on reverse repurchase agreements and interest incurred on repurchase agreements are included in interest income and interest expense respectively.

2.9 Premises and equipment

Land is stated at cost. Other premises and equipment are stated at cost less accumulated depreciation. The residual values and useful lives of premises and equipment are reviewed at each balance sheet date, and adjusted where appropriate Depreciation is calculated using the straight line method over various periods. Where the carrying amount of premises or equipment is greater than the estimated recoverable amount, the carrying amount is reduced to the recoverable amount.

Notes to the consolidated financial statements For the year ended 31" December 2018

Accounting policies (continued)

2.10 Other provisions

Other provisions are recognised when the Group has a present legal or constructive obligation as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation.

2.11 Derivative financial instruments and hedge accounting

Derivative financial instruments are contracts, the value of which is cerived from one or more underlying financial instruments or indices, and include futures, forwards, swaps and options in the interest rate, foreign exchange, equity and credit markets

Derivative financial instruments are recognised in the consolidated statement of financial position at fair value, fair values are derived from prevailing market prices, discounted cash flow models of option pricing models as appropriate

In the consolidated statement of financial position, derivative financial instruments with positive fair values (unrealised gains) are included in other assets and derivative financial instruments with negative fair values (unrealised losses) are included in other liabilities.

The changes in the fair values of derivative financial instruments entered into for trading purposes or to hedge other trading positions are included in trading income

The recognition of changes in the fair values of derivative financial instruments entered into for hedging purposes is determined by the nature of the hedging relationship. For the purposes of hedge accounting, derivative financial instruments are designated as a hedge of either (i) the fair value of a recognised asset or liability (fair value hedge), or (ii) the future cash flows attributable to a recognised asset or liability or a firm commitment (cash flow hedge).

The Group's criteria for a derivative financial instrument to be accounted for as a hedge-include -

- the hedging instrument, the related hedged item, the nature of the risk being hedged, and the risk management objective and strategy must be formally documented at the inception of the hedge,
- it must be clearly demonstrated that the hedge is expected to be highly effective in offsetting the changes in fair values or cash flows attributable to the hedged risk in the hedged item, including how the Group will address the hedge ratio.
- the effectiveness of the nedge must be capable of being reliably measured, and
- there is an economic relationship between the hedging instrument and the hedged item and the effect of credit risk does not dominate the fair value changes of that relationship

Changes in the fair values of derivative financial instruments that are designated, and qualify, as fair value hedges and that prove to be highly effective in relation to the hedged risk, are included in trading income together with the corresponding change in the fair value of the hedged asset or liability that is attributable to the risk that is being hedged. Unrealised gains and losses arising on hedged assets or liabilities which are attributable to the hedged risk are adjusted against the carrying amounts of the hedged assets or liabilities in the consolidated statement of financial position. If the hedge no longer meets the criteria for hedge accounting, any adjustment to the carrying amount of a hedged interest-bearing financial instrument is amortised to income over the remaining period to maturity.

Changes in the fair values of derivative financial instruments that are designated, and qualify, as cash flow hedges and that prove to be highly effective in relation to the hedged risk, are recognised in other comprehensive income. Unrealised gains or losses recognised in other comprehensive income are transferred to the consolidated statement of income at the same time that the income or expense of the corresponding hedged item is recognised in the consolidated statement of income and are included in the same income or expense category as the hedged item. Unrealised gains or losses on any ineffective portion of cash flow hedging transactions are included in trading income.

The interest component of derivatives that are designated, and qualify, as fair value or cash flow hedges is included in interest income or interest expense relating to the hedged item over the life of the derivative instrument.

Hedge accounting is discontinued when the derivative hedging instrument either expires or is sold, terminated or exercised or no longer qualifies for hedge accounting. Gains and losses arising on the termination of cerivatives designated as each flow hedges are recognised in interest income or interest expense over the original tenor of the terminated hedge transaction.

GIB Annual Report 2018

Notes to the consolidated financial statements

For the year ended 31st December 2018

2. Accounting policies (continued)

2.11 Derivative financial instruments and hedge accounting (continued)

Some hybrid instruments contain both a derivative and non-derivative component. In such cases, the derivative is categorised as an embedded derivative. Embedded derivatives are separated from the host contract and accounted for separately if certain criteria are met. Where it is not practically possible to separate the embedded derivative, the entire hybrid instrument is caregorised as a financial asset at EVTEL and meanured at fair value. Changes in fair value are included in trading income.

2.12 Financial guarantees

Financial guarantees are contracts that require the Group to make specified payments to reimburse the holder for a loss it incurs because a specific debtor fails to make payment when due in accordance with the terms of a debt instrument Financial guarantees are issued to financial institutions and other counters a ties on behalf of customers to secure loads overdrafts and other barning facilities, and to other parties in relation to the performance of customers under obligations related to contracts, advance payments made by other parties, tenders and retentions

Financial guarantees are initially recognised at fair value on the date the guarantee is issued. The guarantee liability is subsequently measured at the higher of the initial measurement, less amortisation to recognise the fee income earned over the period, or the present value of any expected payments to settle the liability when a payment under the contract has become probable. The expected loss on financial guarantees is measured at the expected payment to reimburse the holder less any amounts that the Group expects to recover. Any increase in a liability relating to guarantees is recognised in the consolidated statement of increase in the consolidated statement of increase in the consolidated in other liabilities.

2.13 Post retirement benefits

The majority of the Groups employees are equible for , ost retirement periodis under cubic defined beriefic or defined contribution pension plans which are provided through separate trustee administered funds, insurance plans or are directly funded by the Group. The Group also pays contributions to government managed pension plans in accordance with the legal requirements in each location.

The Croips contributions to defined contribution pension plans are expensed in the year to which they rotate

The calculation of no matients in respect of the defined benefit pension plans are performed by qualified actuaries is sing the projected unit credit method. The Group's net obligation is calculated by estimating the amount of future benefit that employees have earned in the current and prior periods, discounting that amount and deducting the fair value of the plan assets. When the calculation results in a potential asset for the Group, the recognised asset is limited to a ceiling so that it does not exceed the exphanic benefits available in the form of refunds from the plans or reductions in future contributions.

Remeasure incrits of the rie, defined benefit hability or asset, which comprise as trainally and asses, the return of plan assets (excluding mittees) and the effect of the asset colling are recognised in mediately in the consolidated statement of other comprehensive income. The Group determines the net inverest expense or income on the net defined benefit hability or asset for the year by applying the discount rate used to measure the defined benefit obligation at the beginning of the year to the opening net defined benefit hability or asset. Net inverest expense and other expenses related to the defined benefit plan are recognised in the consolidated statement of income.

When the Denember of a plan are charged on shell. It liams currened the icculting charge in benefit that relates to part service or the gain or loss on currialment is recognised immediately in the consolidated statement of income. The Group recognises a instanticises on the settlen ent of defined benefit plans of enthe settlement occurs.

2.14 Taxation

a) Current tax

Current taxation is the expected tax payable on the taxable income for the year, using tax rates enacted at the reporting date, and includes any adjustments to tax payable in respect of previous years.

b) Deferred tax

cettered to support leading the final cymethod for term in all the recent is replict when the first here if the enterind of these and for each mode of the entering of the entering the first of the entering that it is probable that future taxable income will be available against which the unutilised tax losses and credits can be utilised. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable. That the included to the extent that it is no longer probable. That the included to the extent that it is no longer probable. That the included to the extent that it is no longer probable. That the included to the extent that it is no longer probable. That the include it is not longer probable that the extent that it is no longer probable.

Notes to the consolidated financial statements

For the year ended 31" December 2018

Accounting policies (continued)

2,15 Cash and cash equivalents

In the consolidated statement of cash flows, cash and cash equivalents comprise cash and other liquid assets, excluding statutory deposits with central banks

2.16 Segment reporting

An operating segment is a distinguishable component of the Group that is engaged in business activities from which revenues are earned and expenses are incurred, including revenues and expenses that relate to transactions with any of the Group's other operating segments. All segments have discrete financial information which is regularly reviewed by the Group's Management Committee, being the Group's chief operating decision maker, to make decisions about resources allocated to the segment and to assess its performance. The Group's Management Committee assesses the segments based on net interest income which accounts for the majority of the Group's revenues.

2.17 Fiduciary activities

The Group administers and manages assets owned by clients which are not reflected in the consolidated financial statements. Asset management fees are earned for providing investment management services and for managing mutual fund products. Asset administration fees are earned for providing custodial services. Fees are recognised as the services are provided and are included in fee and commission income.

2.18 Dividends

Dividends on issued shares are recognised as a liability and deducted from equity when they are approved by the Bank's shareholders

2.19 Shariah-compliant banking

The Group offers various Shariah-compliant products to its customers. The Shariah-compliant activities are conducted in accordance with Shariah principles and are subject to the supervision and approval of the Group's Shariah Supervisory. Board. The disclosures set out in the consolidated Friancial Statements in relation to these activities are prepared in accordance with Financial Accounting Standard 18 issued by the Accounting and Auditing Organisation for Islamic Financial Institutions (AAOIFI)

2.20 Comparatives

Where necessary, comparative figures have been adjusted to conform with changes in presentation in the current year

2.21 Future accounting developments

The international Accounting Standards Board (IASB) have issued a number of new standards, amendments to standards, and interpretations that are not yet effective and have not been applied in the preparation of the consolidated financial statements for the year ended 31st December 2018. The relevant new standards, amendments to standards, and interpretations, are as follows -

- IFRS 16 - Leases -

IFRS 16 requires lessees to recognise most leases on their balance sheets as lease liabilities, with the corresponding right of use assets. IFRS 16 is effective for arinual periods beginning on or after 14 January 2019. Lessees must adopt IFRS 16 using either a full retrospective or a modified retrospective approach. There is no material impact on the Group's consolidated financial statements resulting from the application of this standard.

2.22 Capital management

The Group uses regulatory capital ratios and its economic capital framework to monitor its capital base. The Group manages its capital structure and makes adjustments to the structure taking account of changes in economic conditions and strategic business plans.

3. Accounting estimates and assumptions

The preparation of the consolidated financial statements requires management to make estimates and assemptions that affect the reported amounts of certain financial assets, liabilities, income and expenses

The use of estimates and assumptions is principally limited to the determination of provisions for impairment, the valuation of financial instruments, the valuation of the Group's defined benefit pension plans, and in determining control relationships over investees, as explained in more detail below -

Notes to the consolidated financial statements For the year ended 31st December 2018

3. Accounting estimates and assumptions (continued)

3.1 Provisions for impairment

Financial assets are evaluated for impairment on the basis set out in note 2.5

In determining impairment of financial assets, judgement is required in the estimation of the amount and timing of future cash flows as well as an assessment of whether the credit risk of the financial asset has increased significantly since initial recognition and incorporation of forward looking information in the measurement of ECL. The information about the judgements made are set out in note 27.1.

3.2 Fair value of financial assets and liabilities

Where the fair value of mancial assets and liabilities cannot be derived from active markets, they are determined using a variety of valuation techniques that include the use of mathematical models. The input to these models is derived from observable markets where available, but where this is not feasible, a degree of judgement is required in determining assumptions used in the models. Changes in assumptions used in the models could affect the reported fair value of financial assets and liabilities.

3.3 Retirement benefit obligations

Management, in coordination with indepolident qualified actualies, are received to make assumptions regarding the defined benefit per sion plans. The principal actuarial assumptions for the defined benefit pension plans are set out in note 12 and include assumptions on the discount rate, return on pension plan assets, mortality, future salary increases, and inflation. Changes in the assumptions could affect the reported anset service cost all diletum on pension plan assets.

3.4 Determination of control over investees

The Group acts as fund manager to a number of investment funds. The determination of whether the Group controls an investment fund is based on an assessment of the aggregate economic interests of the Group in the fund and includes an assessment of any carried interests, expected management fees, and the investors' rights to remove the Group as fund manager.

Management are required to conclude whether the Group acts as an agent for the investors in the fund, or if the underlying fund is controlled by the Group

Notes to the consolidated financial statements For the year ended 31st December 2018

4. Classification of assets and liabilities

The classification of assets and liabilities by accounting categorisation was as follows -

Cash and cash equivalents	4,883.2	3,552 6
Statutory deposits with central banks	231.0	215 9
Cash and other liquid assets	5,114.2	3,768 5

Statutory deposits with central banks are subject to local regulations which provide for restrictions on the deployment of these funds

6. Securities purchased under agreements to resell

The Group enters into collateralised lending transactions (reverse repuichase agreements) in the ordinary course of its operating activities. The collateral is in the form of highly rated debt securities. The collateralised lending transactions are conducted under standardised terms that are usual and customary for such transactions.

Placements

Placements at 31' December 2018 included placements with central banks amounting to US\$2,886.4 million (2017 US\$1,749.1 million). The placements with central banks represented the placement of surplus liquid funds

8. Trading securities

	31.12.18	31 12 17
	US\$ millions	US\$ millions
Managed funds	106.4	1380
Equity securities	58.3	40 8
Debt securities	13.0	130
	177.7	1918

Managed funds comprised funds placed for investment with specialist managers

Debt and equity securities comprised securities acquired in relation to investment banking activities undertaken by the Group. The securities were held with the intention of selling in the near term.

9. Investment securities

9.1 Composition

The credit cating profile of in estiment, equilities based on the rowest rating absigned by the major international lating agencies, was as follows:

		31.12.18		31 12 17
	US\$ millions	%	US\$ millions	%
ΛΛΛ (φ.Α. / Λαα to Α3	3,207.8	86.0	3,326 7	870
BBB+ to BBB / Baa1 to Baa3	273.6	7.4	267 1	7 0
BB+ to B- / Ba1 to B3	247.3	6.6	229 3	60
Total debt securities	3,728.7	100.0	3,823.1	1000
Equity investments	168.5		170 7	
	3,897.2		3,993.8	

Notes to the consolidated financial statements For the year ended 31st December 2018

9. Investment securities (continued)

9.1 Composition (continued)

Investment securities principally comprised investment-grade rated debt securities issued by major international financia institutions and government-related entities

Investment securities rated BB+ to B- / Ba1 to B3 at $31^{\rm st}$ December 2018 and $31^{\rm st}$ December 2017 principally comprised GCC sovereign debt securities

Debt securities are classified as investment securities at amortised cost and equity investments are classified as EVTOCI

9.2 Provisions for impairment

The movements in the provisions for credit impairment of investment securities were as follows -

	Collec provisi		Specific provisions	2018		ctive sions	Specific provisions	2017
	Stage 1	Stage 2	Stage 3	Total	Stage 1	Stage 2	Stage 3	Total

Studies provided relief to edition and spirations based out contributed to the recoverable amount of the loan.

Notes to the consolidated financial statements For the year ended 31st December 2018

10. Loans and advances (continued)

10.3 Provisions for impairment (continued)

The gross amount of stage 3 loans against which a stage 3 provision had been made at 31st December 2018 was US\$649.2 million (2017 US\$379.8 million). Total stage 3 provisions at 31st December 2018, excluding provisions in relation to credit-related contingent exposures, represented 83.6 per cent of stage 3 loans (2017 67.1 per cent).

Amounts utilised during the year ended 314 December 2017 mainly represented provisions utilised on the transfer of the related loans to the memora adum records. Recovery efforts on these loans are still ongoing with the intention to maximise potential recoveries.

Total provisions at 31° December 2018 included US\$88.2 million of provisions in relation to credit-related contingent exposures (2017-US\$19.1 million)

10.4 Past due loans

The gross and carrying amounts of loans for which either principal or interest was over 90 days past due were as follows -

		31.12.18 Carrying		31 12 17 Carrying
	Gross	Amount	Gross	Amount
	US\$ millions	U\$\$ millions	US\$ millions	US\$ millions
Corporates	719.1	107.9	454 2	1986
Financial sector	22.2	10.1	25 2	20 2
	741.3	118.0	479 4	2188

Corporates include loans extended for investment purposes

Gross past due loans at 31° December 2018 included US\$649.4 million of loans that were classified as stage 3 for provisioning purposes (2017 US\$378.1 million)

At 31° December 2018, total specific provisions against past due loans represented 84.1 per cent of gross past due loans (2017-54.4 per cent)

10.5 Restructured and modified loans

During the years ended 31st December 2018 and 31st December 2017, the Group modified the contractual terms of a number of facilities for commercial purposes. Such modifications did not result in the derecognition of any assets, and the resulting modification gains were immaterial to the Group's consolidated statement of income. The nature of modifications is set out in note 27.1

During the year ended 31st December 2018, the Group did not restructure any loans or make any concessions that would ordinarily have been accepted due to a deterioration in customer's financial position (2017, \$143.5 million).

10.6 Collateral

The Group did not take possession of any collateral during the years ended 31° December 2018 and 31st December 2017

Notes to the consolidated financial statements

For the year ended 31st December 2018

11. Other assets

	31.12.18	31 12 17
	US\$ millions	US\$ millions
Accrued interest, fees and commissions	265.8	2147
De ivative final call histruments	219.1	182 2
Premises and equipment	102.2	1116
Prepayments	48.1	27 3
Deferred items	37.8	20 1
Other, including accounts receivable	79.5	30 0
	752.5	585 9

the matrixe holding important represent the positive rail value and derivative financial instruments entered into for trading purposes or designated as fair value or each flow heavige. An analysis of the fair value of derivative financial instruments is set out in note 31.4.

The increase in accrued interest, fees and commissions at 31. December 2018 was principally due to an increase in market benchmark rates.

12. Post retirement benefits

The Croup contributes to defined benefit and defined contribution pent in plans which cover substantially all of its employees.

The Bank maintains pension plans for the majority of its employees. Contributions are based on a percentage of salary. The amounts to be paid as retirement benefits are determined by reference to the amounts of the contributions and investment earnings thereon. The total cost of contributions to defined benefit and defined contribution pension plans for the year ended 31° December 2018 amounted to US\$17.8 million (2017, US\$13.8 million).

The Bunk's substatary, Gulf International Bank (UK, Limited (GIBUK), maintains a funded defined beriefit scheme, whilst tille Sauci Arabian subsidiary. GIB Capital Club Clig Gib Capital and branch, maintain an unfunded defined benefit scheme. Both pension schemes are covered in more detail in this note.

12.1 Gulf International Bank (UK) Limited (GIBUK)

The Bank's principal subsidiary (all International Bank (UK) comitted (GIBUK), maintains a funded defined benefit final salary pension plan for a number of its employees. The assets of the plan are held independently of the subsidiary's assets in a separate trustee administered fund. The fund is subject to the UK regulatory framework for pensions.

The fund exposes the Group to the risk of paying unanticipated contributions in times of adverse experience. Such events could be members living for longer than expected higher than expected inflation or subary growth, and the risk that increases in the fund's obligations are not met by a corresponding improvement in the value of the fund's assets.

a) The amount recognised in the consolidated statement of financial position is analysed as follows:-

	31.12.18	31 12 17
	US\$ millions	US\$ millions
Fair value of plan assets	195.2	1818
Present value of fund obligations	207.4	1936
Net liability in the consolidated statement of financial position	12.2	118

The net liability or asset is a valuation measure derived using an actuarial mathematical model. The modelling is performed by an independent actuary based upon the measurement criteria stipulated by the accounting standard IAS19. Employee is a critic Application and the criticis in a criticis and in a criticis and a criticism and a

The valuation measure indicates a point in time view of the fair value of the plan's assets less a discounted measure of the plan's future obligations over a duration of 19 years.

Notes to the consolidated financial statements For the year ended 31" December 2018

12. Post retirement benefits (continued)

12.1 Gulf International Bank (UK) Limited (GIBUK) (continued)

b) The movements in the fair value of plan assets were as follows:-

	2018	2017
	US\$ millions	US\$ millions
At 1° January	181.8	190 1
Included in the consolidated statement of income -		
- Interest income on the plan assets	5.1	48
Included in the consolidated statement of other comprehensive income -		
- Remeasurements -		
- Return on plan assets excluding interest income	(12.1)	67
Other movements -		
- Exchange rate movements	28.6	(100)
- Contributions paid by the participant	0.5	
- Contributions paid by the Group	0.5	05
- Benefits paid by the plan	(9.2)	(10 3)
At 31st December	195.2	1818

The plan assets at 31° December 2018 comprised a 35 per cent (2017–33 per cent) exposure to equities and a 33 per cent (2017–37 per cent) exposure to multi-asset funds, with the balance of the exposure to hedging funds and debt. The plan assets have a quoted price in an active market and the hedging funds are designed to hedge the majority of inflation and interest rate risk.

c) The movements in the present value of fund obligations were as follows:-

	2018 US\$ millions	2017 US\$ millions
		234 1711(10113
At 1 st January	193.6	2039
Included in the consolidated statement of income -		
- Current service cost	0.7	06
Past service cost	0.2	-

Other movements -		
- Exchange rate movements	30.4	(10 6)
 Contributions paid by the participant 	0.5	-
- Benefits paid by the plan	(9.2)	(10 3)
At 31st December	207.4	1936

Notes to the consolidated financial statements

For the year ended 31st December 2018

12. Post retirement benefits (continued)

12.1 Gulf International Bank (UK) Limited (GIBUK) (continued)

d) The movements in the net liability recognised in the consolidated statement of financial position were as follows:-

	2018	2017
	US\$ millions	US\$ millions
At 1 st January	(11.8)	(138)
Net expense included in consolidated statement of income	(1.3)	(10)
Remeasurement included in consolidated statement of comprehensive income	2.2	19
Contributions paid by the Group	0.5	05
Exchange rate movement≤	(1.8)	06
At 31st December	(12.2)	(118)

The Group paid US\$0.5 million in contributions to the plan during 2018 and expects to pay US\$0.4 million during 2019

e) The principal actuarial assumptions used for accounting purposes were as follows:-

	2018	2017
Discount rate (per cent)	2.9	2 5
Retail price inflation (pericent)	3.2	3 2
Consumer price infinition (percent)	2.2	2 2
Pension increase rate (per cent)	3.1	3 1
Salary growth rate (per cent)	3.0	3 0
Average life expectancy (years)	89	89

f) Sensitivity information

The present value of the fund's obligations, which has a weighted average duration of 19 years, was calculated based on certain actuarial assumptions. Should any one of the key assumptions change by an amount that is probable whilst holding the other assumptions constant, the present value of the fund's obligations would increase as follows -

	2018	2017
	US\$ millions	US\$ millions
Life expectancy increased by 1 year	0.2	02
Discount rate decreased by 0.5 per cent	0.2	0 2
Inflat connected and by 0.5 per licint	0.2	0 2

12.2 GIB Capital C.J.S.C. (GIB Capital) and Saudi Arabian branch

CIB cabital CDSC (cIB Capita) and the salk. Suidi Arabidi Branch maintain a distinct direction of the Jonetit scheme based on the prevailing Saudi Labour Laws.

The scheme exposes the Group to the risk of paying unanticipated contributions in times of adverse experience. Such exent a content of a form that one content of the form of the form of the risk to at withdrawals may be higher than assumed.

Notes to the consolidated financial statements For the year ended 31" December 2018

12. Post retirement benefits (continued)

12.2 GIB Capital C.J.S.C. (GIB Capital) and Saudi Arabian branch (continued)

The amount recognised in the consolidated statement of financial position is analysed as follows:-

	31.12.18	31 12 17
	US\$ millions	US\$ millions
Fair value of plan assets	-	=
Present value of fund obligations	12.9	79
Net liability in the consolidated statement of financial position	12.9	79

The net liability or asset is a valuation measure derived using an actuarial mathematical model. The modelling is performed by an independent actuary based upon the measurement criteria stipulated by the accounting standard IAS19 - Employee Benefits. A pension liability does not indicate a funding requirement to the pension plan in the short term.

The valuation measure indicates a point in time view of the fair value of the plan's assets less a discounted measure of the plan's future obligations over a duration of 10 years

b) The movements in the present value of fund obligations were as follows:-

	2018	2017
	US\$ millions	US\$ millions
At 1 ^M January	7.9	67
Included in the consolidated statement of income		
- Current service cost	5.6	2 3
- Interest cost on the fund obligations	0.1	-
Included in the consolidated statement of other comprehensive income -		
- Remeasurements due to changed actuarial assumptions -		
- Financial assumptions	0.6	-
- Demographic assumptions	(0.7)	-
- Experience	0.1	-
Other movements -		
- Benefits paid by the plan	(9.2)	(11)
At 31st December	12.9	79

c) The principal actuarial assumptions used for accounting purposes were as follows:-

		2018
	Saudi Arabian Branch	GIB Capital
Discount rate (per cent)	4.6	4.6
Mortality rate (per cent)	75.0	75.0
Salary growth rate (per cent)	4,2	4.6

CONTINE

Notes to the consolidated financial statements

For the year ended 31st December 2018

12. Post retirement benefits (continued)

12.2 GIB Capital C.J.S.C. (GIB Capital) and Saudi Arabian branch (continued)

d) Sensitivity information

The present value of the fund's obligations, which has a weighted average duration of 10 years, was calculated based on certain actuarial assumptions. Should any one of the key assumptions change by an amount that is probable whilst holding the other assumptions constant, the present value of the fund's obligations would increase / (decrease) as follows -

	2018
	US\$ millions
Discount rate increased by 0.5 per cent	(0.7)
Discount rate decreased by 0 5 per cent	0.7
Long term salary increased by 0 5 per cent	0.6
Long term salary decreased by 0 5 per cent	(0.6)

13. Deposits

The geographical composition of total deposits was as follows

	31.12.18	31 12 17
	US\$ millions	US\$ millions
GCC countries	13,574.0	12,600 2
Other Middle East and North Africa countries	466.9	779 3
Other countries	6,653.7	4,739 4
	20,694.6	18,118 9

GCC deposits comprise deposits from the Gulf Cooperation Council (GCC) country governments and central banks and other institutions headquartered in the GCC states

At 31 December 2018, GCC deposits represented 65 6 per cent of total deposits (2017-69 5 per cent)

Total deposits at 31° December 2018 included Shariah-compliant transactions amounting to US\$3,507.3 million (2017 US\$4,244.5 million). Shariah compliant transactions comprise murabaha contracts.

14. Securities sold under agreements to repurchase

The Croup enters into collateralised by items transactions (repurch selegier ments) in the ordinary course of its financing activities. Collateral is provided in the form of securities held within the investment securities portfolio. At 31. December 2018, the fair value of investment securities that had been pledged as collateral under repurchase agreements was US\$784.8 million (2017; US\$1,183.8 million). The collateralised borrowing transactions are conducted under standardised terms that are usual and customary for such transactions.

15. Other liabilities

	31.12.18	31 12 17
	US\$ millions	US\$ millions
Accrued interest	256.7	196 1
Do a reclinate all terms on	144.3	1315

Notes to the consolidated financial statements

For the year ended 31st December 2018

18. Reserves (continued)

In accordance with the Bank's articles of association, 10 per cent of the Bank's lict profit for the year is required to be transferred to each of the compulsory and voluntary reserves. Transfers to the compulsory reserve are required until such time as this reserve represents 50 per cent of the issued share capital of the Bank. The voluntary reserve may be utilised at the discretion of the Board of Directors. The compulsory reserve may be utilised as per the terms of the Bank's articles of association.

19. Dividends

No divide tid is proposed there-pect of the financial years ended 31" December 2018 and 31" December 2017

20. Net interest income

	Year ended 31.12.18	Year ended 31 12 17
	US\$ millions	US\$ millions
Interest income		
Placements and other liquid assets	187.1	1136
Investment securities	125.5	86 3
Loans and advances	452.2	395 3
Total interest income	764.8	595 2
Interest expense		
Deposits from banks and customers	368.4	235 3
Securities sold under agreements to repurchase	20.3	109
Term III ancing	102.4	95 9
Total interest expense	491.1	342 1
Net interest income	273.7	253 1

Interest incomplendour and advances includes to a longitudine fees that form unit legical part of the effective interest rate of the loan.

The increases in interest income on placements and other liquid assets, and interest expense on deposits from banks and customers was principally due to an increase in deposits from customers during the year ended 31° December 2018 reflecting a higher level of deposit activity by the Cropp's London based 9-bs/diary. Our finternational Bank (QR) Limited This also accounted for an increase in cash and other liquid assets. The increases in the average volume of cash and other liquid assets, and deposits from customers is set out in note 40°.

Accrued interest on impaired and past due loans included in interest income for the year ended 31° December 2018 amounted to nil (2017 nil). There was no accrued but uncollected interest included in interest income on past due loans or past due investment securities for either the year ended 31° December 2018 or 31° December 2017.

21. Fee and commission income

	Year ended 31.12.18	Year ended 31 12 17
	US\$ millions	US\$ millions
Fee and commission income		
Commissions on letters of credit and guarantee	31.2	33.6
Investment banking and management fees	24.4	34.4
Loan commitment fees	3.9	3 2
Loan agency fees	1.2	1 3
Retail fees	0.8	0.2
Other fee and commission income	1.7	16
Total fee and commission income	63.2	74 3
Fee and commission expense	(2.0)	(17)
Net fee and commission income	61.2	726

Notes to the consolidated financial statements

For the year ended 31st December 2018

21. Fee and commission income (continued)

Investment banking and management fees comprise fees relating to the provision of investment management and financial services, including asset and fund management, underwriting activities, and services relating to structured financing privatisations, initial public offerings, and mergers and acquisitions

Investment banking and management fees for the year ended 31st December 2018 included fee income relating to the Group's fiduciary activities amounting to US\$19.3 million (2017 US\$26.8 million). The decrease in investment banking and management fees was principally due to a lower level of investment in funds managed by the Group, and lower performance related fees reflecting the challenging market environment prevailing during the year ended 31st December 2018.

Fee and commission expense principally comprises security custody fees and bank charges and commissions

22. Foreign exchange income

Foreign exchange income principally comprises customer-initiated foreign exchange contracts which have been offset in the market with matching contracts. There is no remaining market risk associated with these offset customer related foreign exchange contracts.

Foreign exchange includes spot and forward foreign exchange contracts, and currency futures and options

23. Trading income

	Year ended 31.12.18	Year ended 31 12 17
	US\$ millions	US\$ millions
Interest rate derivatives	6.0	66
Equity securities	3.4	30
Debt securities	0.2	03
Managed funds	(0.2)	30
Commodity options	0.1	01
	9.5	130

Trading income comprises gains and losses arising both on the purchase and sale, and from changes in the fair value, of trading instruments, together with the related interest income, interest expense and dividend income. Trading income accordingly incorporates all income and expenses related to the Group's trading activities.

Interest rate derivative income principally comprises customer-initiated contracts which have been offset in the market with matching contracts. There is no remaining market risk associated with these contracts.

24. Other income

	Year ended 31.12.18	Year ended 31 12 17
	US\$ millions	US\$ millions
Recoveries on previously written off assets	26.7	18
Dividends on equity investments classified as FVTOCI	8.6	69
Net realised losses on investment debt securities	-	(0.4)
Realised loss on writteri off asset	-	(10)
Sundry income	0.2	0 2
	35.5	75

Recoveries on previously written off assets comprise recoveries on assets that had previously been either written off or transferred to the memorandum records

Notes to the consolidated financial statements

For the year ended 31st December 2018

24. Other income (continued)

Net realised losses on investment debt securities for the year ended 31°. December 2017 principally related to the sale of securities due to credit concerns.

The realised loss on written of casset for the year ended 31. December 2017 related to a contractual conditional partial write of on a room for which the conditions were met by the customer during the year.

25. Operating expenses

Operating expenses and uded US\$7.4 hillion of exceptional expenses which are one-off in its lurier

26. Segmental information

Segmental information is presented in respect of the Group's business and geographical segments. The primary reporting format, business segments, reflects the mainer in which financial information is evaluated by the Board of Directors and the Group Management Committee.

26.1 Business segments

For financial reporting purposes, the Ciroup is organized into four main operating segments

- Whole-sile banking the prevision of whole-site commercial financing and other credit facilities for co-porate and
 institutional customers.
- Treasury, the provision of a biconitarige of treasury and capital market products and services to corporate and financial institution clients, money market, proprietary investment, and trading activities and the management of the Group's balance sheet, including funding.
- Asset in anagement and it vestment benking, the provision of case, and fund management services, and of maneial idvisor / services relatinistic structured final engige in aliestions, initial public offerings, and margers and acquisitions.
 Head offer and support units income arising on the investment of the Groups net free papiral funds and expense incurred by support units, including the investment in the retail banking strategy prior to the launch of all planned retail banking products and services.

The results reported for the business segments are based or the Gloup's internal financial reporting systems, which report interest revenue and interest expense on a net basis. The accounting policies of the segments are the same as those applied in the preparation of these consolidated francial statements and are set out in note 2. Transactions between business segments are conducted on normal commercial terms and conditions. Transfer pricing between the business units is based on the market cost of funds.

Segment results, assets and liabilities comprise items directly attributable to the business segments. Liabilities reported for head office and support units comprise retail related ecoposits uncosed in rance f-cultics and related accrued interest, the cost of which is recharged to the relevant operating business segments.

GIB 98 Annual Report 2018

Notes to the consolidated financial statements For the year ended 31st December 2018

26. Segmental information (continued)

26.1 Business segments (continued)

26.2 Geographical segmentsAlthough the Group's four main business segments are managed on a worldwide basis, they are considered to operate in two geographical markets the GCC and the rest of the world

The geographical composition of total income and total assets based on the location in which transactions are booked and income is recorded was as follows -

	Total income	2018 Total assets	Total income	2017 Total assets
	US\$ millions	US\$ millions	US\$ millions	US\$ millions
GCC	325.2	18,729.5	275 8	18,493 2
Other countries	73.3	8,816.6	845	6,978 1
	398.5	27,546.1	360 3	25,471 3

The geographical analyses of deposits and risk assets are set out in notes 13 and 28 respectively

Notes to the consolidated financial statements For the year ended 31st December 2018

27. Risk management

The principal risks associated with the Group's businesses are credit risk, market risk, liquidity risk and operational risk. The Group has a comprehensive risk management framework in place for managing these risks which is constantly evolving as the business activities change in response to credit, market, product and other developments. The risk management trame work is guided by a number of overriding principles including the form all definition of risk management governance, an evaluation of risk appetite expressed in terms of formal risk limits, risk oversight independent of business units, disciplined risk assessment and measurement including Value-at Risk (VaR) methodologies and portfolio stress testing, and risk diversification. The Board of Directors set the Group's overall risk parameters and risk tolerance: and the significant risk management policies. A Board Risk Policy Committee reviews and reports to the Board of Directors on the Group's risk profile and risk taking activities including approxing obligon limit, by rating industry and geography, and the review of rating back toking exercises. A Management Colimittee, chaired by the Group Chief Executive Officer, has the primary responsibility for sanctioning risk taking activities and risk management policies within the overall risk parameters and tolerances defined by the Board of Directors. A Croup Risk Committee, under the chairmanship of the Chief Risk Officer and comprising the Group's most senior risk professionals, provides a forum for the review and approval of risk measurement methodologies, risk control processes and the approval of new products, including approval of LGDs and eligible collateral for ECL calculations. The Group Risk Committee also reviews all risk policies and limits that require the formal approval of the Management Committee. The risk management control process is based on a detailed structure of policies, procedures and limits, and comprehensive risk measurement and management information systems for the control, monitoring and reporting of risks. The Provisioning Committee approves the categorisation of an exposure as stage 1, stage 2 or stage 3 Periodic reviews by internal auditors and regulatory authorities subject the risk management processes to additional scrutiny which help to further strengthen the risk management environment

The principal risks associated with the Group's businesses and the related risk management processes are described in detail in the Basel 3 Pillar 3 disclosure report in the Annual Report, and are summarised below together with additional quantitative analyses -

27.1 Credit risk

Credit risk is the risk that counterparties will be unable to meet their obligations to the Group Credit risk arises principally than the Group's lending and investment activities in addition to other transactions involving both or hard off-balance specific higher line line transactions involving both or hard off-balance specific higher line transactions. Disciplined processes are in place at both the business unit and corporate level that are intended to ensure that risks are accurately assessed and properly approved and monitored. Formal credit limits are applied at the individual transaction, counterparty, country and portfolio levels. Overall exposures are also evaluated to cristile a broad diversification of the critical management process involves the monitoring of concentrations by product, industry, single obligor, risk grade and geography, and the regular appraisal of counterparty credit quality through the analysis of qualitative and quantitative information.

Credit risk is untively managed and rigoror sly monitored in accordance will well defined credit policies and procedures. Prior to the approval of a credit proposal, a detailed credit risk assessment is carried out which includes an analysis of the obligor financial condition proceed position, business environment and quality of nipriagrament. The risk assessment generates are in the fact credit risk rating for each exposure, which officers the credit approval pecinion and the terms and conditions of the transaction. For cross border transactions an analysis of country risk is also conducted. The Group bases its credit decision for an individual counterparty on the aggregate Group exposure to that counterparty and all its related entities. Groupwide credit limit setting and approval authorisation requirements are conducted within Board approved guidelines, and the measurement, monitoring and control of credit exposures are done on a Groupwide basis in a consistent manner.

The Group accommission of experience permeter of foregatic xcharge and derive tive financial of the natural through the use of master netting agreements and collateral arrangements.

GIB Annual Report 2018

Notes to the consolidated financial statements For the year ended 31* December 2018

27. Risk management (continued)

27.1 Credit risk (continued)

Debt investment securities are considered to have low credit risk when their credit risk rating is equivalent to an investment grade rating or a debt investment security with similar credit risk characteristics

The criteria for determining whether credit risk has increased significantly vary by portfolio and include quantitative changes in the probability of default (PDs) and qualitative factors, including whether the exposure has been watch-listed, whether the exposure is more than 30 days past due and as a backstop based on delinquency

Definition of default

The Group considers a financial asset to be in default when the borrower is unlikely to pay its credit obligations to the Group in full, without recourse by the Group to actions such as liquidating collateral, or the borrower is past due more than 90 days on any credit obligation to the Group. In assessing whether a borrower is in default, the Group considers both qualitative factors such as breaches of covenants and quantitative factors such as overdue status and non-payment on another obligation of the same issuer to the Group.

Incorporation of forward-looking information

The Group incorporates forward-looking information into both its assessment of whether the credit risk of an instrument has increased significantly since its initial recognition and its measurement of ECL. Based on advice from the Chief Economist and consideration of a variety of external actual and forecast information, the Group formulates a fundamental view of the future direction of relevant economic variables as well as a reasonable range of possible scenarios.

The Group has identified economic factors such as the International Monetary Fund (IMF) trends in fiscal balances and GDP growth in key markets of the Kingdom of Saudi Arabia, United Arab Emirates and United States of America as well as the views of the Chief Economist. Given the nature of the Group's exposures and availability of historical statistically reliable information, the Group derives the point-in-time (PIT) probability of default (PD) using the through-the-cycle (TTC) PD data published by Standard & Poors (S&P) for each rating category. The Group uses the Vasicek model to link the TTC PDs with forward looking economic factors to drive PIT PD estimates for each rating category. The Vasicek model takes into consideration forward looking economic forecasts under three scenarios (base case, negative case, and positive case), historical economic data, the asset correlation of each rating category (as per the Basel IRB economic capital formula), and TTC PDs for deriving PIT PDs. The relationship between the economic factors and default and loss rates have been developed using internal historical data and relevant external market data.

Measurement of ECL

The key input parameters into the measurement of ECL are the probability of default (PD), loss given default (LGD) and exposure at default (EAD). These parameters are derived from internally developed statistical models, other historical data using both internal and external factors, and incorporates forward-looking information.

PD estimates are estimates at a certain date, and are calculated using Standard & Poor's recovery studies data after consideration of the contractual maturities of exposures and estimated prepayment rates and are derived using the Vasicek model

The PIT PD estimates are converted to cumulative PIT PDs for exposures that have tenors in excess of one year and that are assessed on lifetime PDs. The lifetime PDs are calculated by compounding the 12 month PIT PDs

LGD is the magnitude of the likely loss if there is a default. The Group estimates LGD parameters based on the history of recovery rates of claims against defaulted counterparties, based on historical data using both internal and external factors.

EAD represents the expected exposure in the event of a default. The Group derives the EAD from the current exposure to the counterparty and potential changes to the current amounts allowed under the contract including amortisation. The EAD of a financial asset is its gross carrying amount. For lending commitments and financial guarantees, the EAD is converted to balance sheet equivalents.

Subject to a maximum of 12-month PD for financial assets for which credit risk has not significantly increased, the Group measures ECL considering the risk of default over the maximum contractual period over which it is exposed to credit risk

Where modelling of a parameter is carried out on a collective basis, the financial instruments are grouped on the basis of shared risk characteristics including instrument type, credit risk ratings and geographic location of the borrower

GIB Annual Report 2018

Notes to the consolidated financial statements

For the year ended 31^{st} December 2018

27. Risk management (Continued)

27.1 Credit risk (continued)

The Group calculates PIT PD estimates under three scenarios, a base case, negative case and positive case. A probability weighted ECL is then calculated by assigning probabilities, based on current market conditions, to each scenario. At 31° December 2018, the probabilities assigned to the base case, negative case and positive case scenarios were in the ratio of 50.35.15 respectively (2017) 50.35.15)

Modified financial assets

The contractual terms of a term may be medified for a number of reasons including changing market conditions and other factors not related to the current or potential credit deterioration of a customer. When the terms of a financial asset are medified and the modification does not result in devecogn from the determination of whether the asset's credit risk has increared significantly reflects a comparison of its remaining lifetime PD at the reporting date based on modified terms, with the remaining lifetime PD estimated based on data at initial recognition and the original contractual terms

The Group lenegotiates loads to curtomels in fir aroual difficurties to maximise collection opportunities and minimise the risk of default. The Group grants forbearance on a selective basis if there is evidence that the customer has made all reasonable efforts to innour the original contractual terms and the customer is expected to be able to meet the revised terms. Forbearance is a qualitative indicator of a significant increase incredit itsk land a customer would need to demonstrate consistently good payment behaviour over a period of time before the exposure is no longer considered to be credit-impaired, or in default, or the PD has decreased such that the provision for credit-impairment reverts to being measured at an amount equal to the 12 month ECL

a) Maximum exposure to credit risk

The gross maximum exposure to credit risk before applying collateral, guarantees and other credit enhancements was as follows

	31.12.18	31 12 17
	US\$ millions	US\$ millions
Balance sheet items:		
Cash and other liquid assets	5,114.2	3,768 5

27. Risk management (continued)

27.1 Credit risk (continued)

b) Credit risk profile

The Group monitors, manages and controls credit risk exposures based on an internal credit rating system that rates individual obligors based on a rating scale from 1 to 10, subject (o positive (·) and negative (-) modifiers for rating grades 2 to 6. The internal credit rating is a measure of the credit-worthiness of a single obligor, based on an assessment of the credit risk relating to senior unsecured, medium-term, foreign currency credit exposure. The primary objectives of the internal credit rating system are the maintenance of a single uniform standard for credit quality measurement, and to serve as the primary basis for Board-approved risk parameters and delegated credit authority limits.

The internal credit rating system also serves as a key input into the Group's risk-adjusted return on capital (RAROC) performance measurement system

The 7-rated stage 1 exposure at 31^{5} December 2017 largely related to a past due but not impaired loan exposure guaranteed by a government export credit agency

Stage 3 financial assets represent assets for which there is objective evidence that the Croup will not collect all amounts due, including both principal and interest, in accordance with the contractual terms of the obligation

Notes to the consolidated financial statements

For the year ended 31st December 2018

27. Risk management (continued)

27.1 Credit risk (continued)

b) Credit risk profile (continued)

The Group holds collateral against loans and advances in the form of physical assets, cash deposits, securities and guarantees. The amount and type of collateral is dependent upon the assessment of the credit risk of the counterparty. The market / fair value of the collateral is actively monitored on a regular basis and requests are made for additional collateral in accordance with the terms of the underlying agreements. Collateral is not usually held against securities or placements and no such collateral was held at either 31°. December 2018 or 31 ° December 2017

The Group held collateral amounting to US\$40.5 million that was considered as a credit enhancement and hence reduced the ECL of Stage 3 financial assets at 31° December 2018 (2017 US\$36.9 million)

An analysis of the cledit risk in respect of foreign exchange and derivative financial instruments asset out in note 31 while the notional and instruments are set out in note 32.

c) Credit risk concentration

The Croup monitori concentrations of credit risk by sector and by geographic location. The industrial classification of fours and advances is set out in note 10.2. The geographical distribution of risk assets is set out in note 28. An analysis of the credit risk is respect of to leight exchange and derivative lineacial notionments is set out in note 51.

d) Settlement risk

Settlement risk is the risk of loss due to the failure of a counterparty to honour its obligations to deliver cash, securities, or other assets as contractually agreed

For certain types of transactions, the Group mitigates this risk by conducting settlements through a settlement or clearing agent to ensure that a trade is settled only will enough carries have f. If illed their contractual settlement obligations Settlement limits form part of the credit approval and limit monitoring process.

27.2 Market risk

Market risk is the risk of loss due to adverse changes in interest rates, foreign exchange rates, equity prices and market conditions, such as liquidity. The principal market risks to which the Group is exposed are interest rate risk, foreign exchange risk and equity price risk associated with its trading, investment and asset and liability management activities. The portfolio effect of oiding a diversified range of instruments across a valiety of Usinesses and geographic areas contribute to a reduction in the potential negative impact on earnings from market risk factors.

a) Trading market risk

The Group's trading activities principally comprise trading in debt and equity securities, foreign exchange and derivative financial instruments. Derivative or and all instruments include futures forwards, swaps, and options in the interest rate. foreign exchange, equity, credit and commodity markets. The Group manages and controls the market risk within its trading portfolios through limit structures of both a VaR and non-VaR nature. Non VaR based constraints relate, inter alia, to positions, volumes, concentrations, allowable losses and maturities. VaR is a risk measurement concept which uses the policy of a system of the production of the production of the production of the production of participation of the production of participation of the production of participation of the production of the pro that there are limitations to the VaR methodology. These limitations include the fact that the historical data may not be the best proxy for future, like like overheims. The moup performs regular back testing even section comparement. I relite and losses with the VaR estimates to monitor the statistical validity of the VaR model. VaR is calculated based on the Group's market risk exposures at the close of the business each day Intra-day risk levels may vary from those reported at the end of the day in addition less calbey and the specified confidence investor for captured by the MaRin ethodology. MaRin not a measure of the absolute limit of market risk and losses in excess of the VaR amounts will, on occasion, arise. To manage the risk associated with extreme market movements, the Group conducts stress testing which measures the impact of simulated abnormal changes in market rates and prices on the market values of the portfolios. The composition of the debt contect by make the interest let out in all 68 will all years behalter than outhistromentain you, the\ Police# exchange and derivative trading contracts, is set out in note 31

Notes to the consolidated financial statements For the year ended 31" December 2018

27. Risk management (continued)

27.2 Market risk (continued)

a) Trading market risk (continued)

The VaR for the Group's trading positions, as calculated in accordance with the basis set out in note 34, was as follows -

				2018				2017
	31.12.18	Average	High	Low	31.12 17	Average	High	Low
	US\$ millions							
Total VaR	3.5	2.4	3.7	1.8	18	18	2 5	0 1
Total undivers fied stressed VaR	9.8	7.2	10.5	5.1	5 1	41	5.3	0.3

b) Non-trading market risk

Structural interest rate risk arises in the Group's core balance sheet as a result of mismatches in the repricing of interest rate sensitive financial assets and liabilities. The associated interest rate risk is managed within VaR limits and through the use of models to evaluate the sensitivity of earnings to movements in interest rates. The repricing profile and related interest rate sensitivity of the Group's financial assets and liabilities are set out in note 30. Movements in the fair value of equity investment securities are accounted for in other comprehensive income. The Group does not maintain material foreign currency exposures. In general, the Group's policy is to match financial assets and Labilities in the same currency or to mitigate currency risk through the use of currency swaps. Details of significant foreign currency net open positions are set out in note 31.5.

The more significant market risk related activities of a non-trading nature undertaken by the Group, the related risks associated with those activities, and the types of derivative Friancial instruments used to manage and mitigate such risks are summarised as follows -

Activity	Risk	Risk mitigant
Management of the return on variable rate assets funded by shareholders' funds	Reduced profitability due to a fail in short-term interest rates	Receive fixed interest rate swaps
Fixed rate assets funded by floating rate liabilities	Sensitivity to increases in short-term interest rates	Pay fixed interest rate swaps
Investment in foreign currency assets	Sensitivity to strengthening of US\$ against other currencies	Currency swaps
Profits generated in foleign cultencies	Sensitivity to strengthening of US\$ against other currencies	Forward foreign exchange contracts and purchased currency options

27.3 Liquidity risk

Liquidity risk is the risk that sufficient funds are not available to meet the Group's financial obligations on a punctual basis as they fall due

Liquidity management policies are designed to ensure that funds are available at all times to meet the funding requirements of the Group, even in adverse conditions in normal conditions the objective is to ensure that there are sufficient funds available not only to meet current financial commitments but also to facilitate business expansion. These objectives are met through the application of prudent liquidity controls. These controls provide security of access to funds without undue exposure to increased costs from the liquidation of assets or the aggressive bidding for deposits. The Group's liquidity controls ensure that, over the short-term, the future profile of cash flows from maturing assets is adequately matched to the maturity of liabilities. Liquidity controls also provide for the maintenance of a stock of liquid and readily realisable assets and a diversified deposit base in terms of both maturities and renge of depositors.

The management of liquidity and funding is primarily conducted in the Group's individual geographic entities within limits set and approved by the Board of Directors. The limits take account of the depth and liquidity of the market in which the entity operates. It is the Group's general policy that each geographic entity should be self-silficient in relation to funding its own operations.

Notes to the consolidated financial statements For the year ended 31st December 2018

27. Risk management (continued)

27.3 Liquidity risk (continued)

The Group's liquidity management policies include the following -

- the monitoring of (i) future contractual cash flows against approved limits, and (ii) the level of liquid resources available in a stress event.
- the monitoring of balance sheet liquidity ratios,
- the monitoring of the sources of funding in order to ensure that funding is derived from a diversified range of sources
- the monitoring of depositor concentrations in order to avoid undue reliance on individual depositors, the mulnitenance of a satisfactory level of term financing
- the maintenance of appropriate standby funding arrangements, and
- the maintenance of liquidity and funding contingency plans. These plans identify early indicators of stress conditions and prescribe the actions to be taken in the event of systemic or other crisis, while minimising adverse long-term implications for the Group's business activities.

The Group has established approved limits which restrict the volume of liabilities maturing in the short-term. An independent risk manuagement function monitors the fature cash flow maturity profile against approved a rath on a daily basis. The cash flows are diprited against limits applying to both daily and cumulative cash flows occurring over a 30 day period. The liquidity limits ensure that the net cash outflows over a 30 day behold do not exceed the engible stock of two Fible liquid resources. The cash flow analysis is also monitored in a weekly basis by the Assets and Liabilities Committee (ALCO).

Custon or deposits form a significant cart of the Grond's fording The Grond places considerable instance of imaintening the stability of both its or some card intercank deposits. The Hability of deposits depends on the antanning confidence in the Group's financial trength and financial transporterry.

The inationity profile of assets and liabilities is not out to note 19. An analysis of debt investment reducties by rating classification is so, out in note 27.1.

27.4 Operational risk

Operational risk is the risk of unexpected losses resulting from inadequate or failed internal controls or procedures, systems failures, fraud, business interruptions compliance breaches, human error management radure or inadequate staffing

A framework and methodology has been developed to identify and control the various operational risks. While operational risk cannot be entirely eliminated, it is managed and mitigated by ensuring that the appropriate infrastructure, controls, systems, procedures, and trained and competent people are in place throughout the Group. A strong internal audit function makes (e.g., tar, independent appraisals of the cent-of-environment in all identified tisk areas. Acceptately tested contingers y arrangements are also in place to support operations in the event of a range of possible disaster scenarios.

27.5 Capital management

The Group's lead regulator, the Central Bank of Bahrain (CBB), sets and monitors capital requirements for the Group as a whole. The parent company and individual banking operations are directly supervised by their local regulators.

As inferred to is mole detail in note off the Group i repted Brisel 3 copital accquacy mone work with effect from 1 January 2015 as required by the CBB.

In applying current capital requirements, the CBB requires the Group to maintain a prescribed minimum ratio of total regulatory capital to total risk weighted assets. The CBB's minimum risk asset ratio is 12.5 per cent compared to a minimum ratio of 8 per cent prescribed by the Basel Committee on Banking Supervision. The Group calculates regulatory capital requirements for general market risk in its trading portfolios using a Value-at-Risk model and uses the CBB's prescribed risk weightings under the standardised approach to determine the risk-weighted amounts for credit risk and the control of the Risk operator of the less than a control of the control of the regular requirements of the according to CRP proceibled angle of characteristic renging from 1.2 to 8 or cent to the according to the according to CRP proceible and of right protefored to sine sine.

Notes to the consolidated financial statements For the year ended 31st December 2018

27. Risk management (continued)

27.5 Capital management (continued)

The Group's regulatory capital is analysed into two tiers -

- Tier 1 capital, comprising issued share capital, share premium, retained earnings and reserves, adjusted to exclude revaluation gains and losses arising on their emeasurement to fair value of derivative cash flow hedging transactions.
- Tier 2 capital, comprising qualifying subordinated term finance and stage 1 and stage 2 impairment provisions for loans and advances, after applicable haircuts and ceiling limitations

The CBB applies various limits to elements of the regulatory capital base. The amount of innovative tier 1 securities cannot exceed 15 per cent of total tier 1 capital, qualifying tier 2 capital cannot exceed tier 1 capital, and qualifying subordinated term finance cannot exceed 50 per cent of tier 1 capital. There are also restrictions on the amount of stage 1 and stage 2 impairment provisions that may be included as part of tier 2 capital.

The Group's risk exposures are categorised as either trading book or banking book, and risk-weighted assets are determined according to specified requirements that seek to reflect the varying levels of risk attached to assets and off-balance sheet exposures

The Group's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain the future development of the business. The impact of the level of capital on shareholders' return is also recognised as well as the need to maintain a balance between the higher returns that might be possible with greater gearing and the advantages and security afforced by a sound capital position. The Group manages its capital structure and makes adjustments to the structure taking account of changes in economic conditions and strategic business plans. The capital structure may be adjusted through the dividend payout and the issue of new shares.

The Group complied with all externally imposed capital requirements throughout the years ended 31st December 2018 and 31st December 2017

There have been no material changes in the Group's management of capital during the years ended 31st December 2018 and 31st December 2017

The capital adequacy ratio calculation is set out in note 34

Notes to the consolidated financial statements For the year ended 31" December 2018

30. Interest rate risk (continued)

Based on the repricing profite at 31st December 2018, and assuming that the financial assets and liabilities were to remain until maturity or settlement with no action taken by the Group to alter the interest rate risk exposure, an immediate and sustained one per cent increase in interest rates across all maturities would result in an increase in net income before tax for the following year by approximately US\$18.5 million and an increase in the Group's equity by US\$17.6 million. The impact on the Group's equity represents the cumulative effect of the increase in interest rates over the entire duration of the mismatches in the repricing profile of the interest rate sensitive financial assets and liabilities.

The Value-at-Risk by risk class for the Group's trading positions is set out in note 27. The market risk relating to derivative and foreign exchange instruments classified as EVTPL is set out in note 31.

31. Derivatives and foreign exchange instruments

The Group utilises derivative and foreign exchange instruments to meet the needs of its customers, to generate trading revenues and as part of its asset and liability management (ALM) activity to hedge its own exposure to market risk. Derivative instruments are contracts whose value is derived from one or more financial instruments or indices. They include futures forwards, swaps and options in the interest rate, foreign exchange, equity, credit and commodity markets. Derivatives and foreign exchange are subject to the same types of credit and market risk as other financial instruments. The Group has appropriate and comprehensive Board-approved policies and procedures for the control of exposure to both market and credit risk from its derivative and foreign exchange activities.

In the case of derivative transactions, the notional principal typically does not change hands. It is simply a quantity which is used to calculate payments. While notional principal is a volume measure used in the derivative and foreign exchange markets, it is neither a measure of market nor credit risk. The Group's measure of credit exposure is the cost of replacing contracts at current market rates should the counterparty default prior to the settlement date. Credit risk amounts represent the gross unrealised gains on non-margined transactions before taking account of any collateral held or any master netting agreements in place.

The Group participates in both exchange traded and over-the-counter (OTC) derivative markets. Exchange traded instruments are executed through a recognised exchange as standardised contracts and primarily comprise futures and options. OTC contracts are executed between two counterparties who negotiate specific agreement terms, including the underlying instrument, notional amount, maturity and, where appropriate, exercise price. In general, the terms and conditions of these transactions are tailored to the requirements of the Group's customers although conform to normal market practice. Industry standard documentation is used, most commonly in the form of a master agreement. The existence of a master netting agreement is intended to provide protection to the Group in the event of a counterparty default.

The Group's principal foreign exchange transactions are forward foreign exchange contracts, currency swaps and currency options. Forward foreign exchange contracts are agreements to buy or sell a specified quantity of foreign exchange on a specific future date at an agreed rate. A currency swap involves the exchange, or notional exchange, of equivalent amounts of two currencies and a commitment to exchange interest periodically until the principal amounts are re-exchanged on a specified future date. Currency options provide the buyer with the right, but not the obligation either to purchase or sell a fixed amount of a currency at a specified exchange rate on or before a specified future date. As compensation for assuming the option risk, the option seller (or writer) receives a premium at the start of the option period.

The Group's principal interest rate-related derivative transactions are interest rate swaps, forward rate agreements, futures and options. An interest rate swap is an agreement between two parties to exchange fixed rate and floating rate interest by means of periodic payments based upon a notional principal amount and the interest rates defined in the contract. Certain agreements combine interest rate and foreign currency swap transactions, which may or may not include the exchange of principal amounts. In a forward rate agreement, two parties agree a future settlement of the difference between an agreed rate and a future interest rate, applied to a notional principal amount for an agreed period. The settlement, which generally occurs at the start of the contract period, is the discounted present value of the payment that would otherwise be made at the end of that period. An interest rate future is an exchange traded contract for the delivery of a standardised amount of a fixed income security or time deposit at a future specified date. Interest rate options, including caps, floors and collais, provide the buyer with the right, but not the obligation, either to purchase oil sell an interest rate financial instrument at a specified price or rate on or before a specified future date.

The Group's principal equity-related derivative transactions are equity and stock index options. An equity option provides the buyer with the right, but not the obligation, either to purchase or sell a specified stock or index at a specified pure or level on or defore a specified future date.

Notes to the consolidated financial statements

For the year ended 31st December 2018

31. Derivatives and foreign exchange instruments (continued)

The Group buys and sells credit protection through credit default swaps. Credit default swaps provide protection against the decline in value of a referenced asset as a result of credit events such as default or bankruptcy. It is similar in structure to an option whereby the purchaser pays a premium to the seller of the credit default swap in return for payment related to the deterioration in value of the referenced asset. Credit default swaps purchased and sold by the Group are classified as derivative financial instruments.

31.1 Product analysis

The table below summarises the aggregate notional and credit risk amounts of foreign exchange, interest rate and commodity contracts

31.5 Significant net open positions

There were no significant derivative trading or foreign currency net open positions at either 31st December 2018 or at 31st December 2017

31.6 Hedge accounting

The Group offers fixed rate Lability and asset products to clients in the normal course of business. The interest rate received or paid is fixed for the term of the transaction, exposing the Group to interest rate risk during the life of the transaction.

In order to mitigate this interest rate market risk exposure, the Group uses interest rate swaps in one-to-one, one-to-many and many-to-many relationships. The derivative products effectively tie a floating interest rate to the fixed rate client transaction. The hedging item is executed at the same time that the client-related transaction, the hedged item, is booked

Generally, the hedging item executed exactly matches the critical terms of the hedged item, that being the nominal value, currency, trade date and maturity date and hence the hedge ratio is expected to remain close to 100 per cent. The hedging relationship is generally highly effective because the critical terms of the instruments match at inception and will remain effective throughout the contractual term of the derivative until maturity. The critical terms are reviewed every reporting date to ensure that the match persists

The Group's derivative instruments are also subject to credit risk. Credit risk can arise on both the hedging instrument and the hedged item in the form of counterparty credit risk or the Group's own credit risk. The Group mitigates its credit exposure through the use of master netting arrangements and collateral arrangements as set out in note 27.1 and credit risk is therefore, unlikely to dominate the change in fair value of such hedging instruments.

Notes to the consolidated financial statements For the year ended 31" December 2018

31. Derivative and foreign exchange instruments (continued)

31.6 Hedge accounting (continued)

The hedging relationship is tested at each reporting date by comparing the fair value of the hedging instrument with that of the hedged instrument. If, as a result of the ting, there is a deviation to the hedge ratio then ineffectiveness is recognised in the consolidated statement of income. The hedging relationship is subsequently either rebalanced or discontinued in accordance with the Group's Board-approved policies and procedures.

The hedging instruments comprise hedges of fixed late as let and fixed rate liability products with the following maturity profile -

Notional amounts	Year 1 US\$ millions	Years 2 & 3 US\$ millions	Years 4 & 5 US\$ millions	Over 5 years US\$ millions	Total US\$ millions
At 31st December 2018					
Fixed rate asset products	3,762.0	733.1	378.0	2,123.8	6,996.9
Fixed rate liability products	5,509.3	609.2	503.5	-	6,622.0
At 31st December 2017					
Fixed rate asset products	3,046 0	1,256.4	562 7	1,340 4	6,205 5
Fixed rate liability products	5,386 9	5331	503 6	-	6,423 6

Gains and losses recognised in the consolidated statement of income relating to fair value hedging relationships were as follows -

	2018	2017
	US\$ millions	US\$ millions
Net gains on derivatives fair value hedging instruments	26.7	158
Net losses on hedged items attributable to the hedged risk	(26.7)	(15 8)

The notional amount, fair values, and changes in fair values of hedging instruments for the year ended 31" December 2018 used as the basis for securities hedge moffectiveness were as follows:

	Notional amount US\$ millions	Fair value US\$ millions	Changes in fair value US\$ millions
At 31 st December 2018			
Financial assets			
Interest rate contracts	7,975.4	80.4	26.7
Financial liabilities			
Interest rate contracts	5,643.5	(5.8)	-
	13,618.9	74.6	26.7
At 31st December 2017			
Financial assets			
Interest rate contracts	8,950 6	537	125
Financial liabilities			
Interest rate contracts	3,678 5	(5 8)	3 3
	12,629 1	47 9	158
			٥

31. Derivatives and foreign exchange instruments (continued)

31.6 Hedge accounting (continued)

The carrying amount, accumulative changes in fair values, and changes in fair values of hedged instruments for the years ended 31st December 2018 and 31st December 2017 used as the basis for recognising hedge ineffectiveness were as follows -

	Notional amount US\$ millions	Fair Value US\$ millions	Changes in fair value US\$ millions
At 31" December 2018			
Financial assets			
Placements and securities purchased under agreement to resell	3,039.1	(0.5)	0.8
Loans and advances	484.8	(10.3)	(2.5)
Investment securities	3,473.0	(65.6)	(25.5)
	6,996.9	(76.4)	(27.2)
Financial liabilities			
Deposits and securities sold under agreement to repurchase	6,151.5	(0.3)	(1.9)
Senior term financing	470.5	2.1	2.4
	6,622.0	1.8	0.5
	13,618.9	(74.6)	(26.7)
At 31" December 2017			
Financial assets			
Placements and securities purchased under agreement to resell	2,784 2	(13)	01
Loans and advances	474 4	(7 8)	1 4
Investment securities	2,946 9	(40 1)	(12 3)
	6,205 5	(49 2)	(108)
Financial liabilities			
Deposits and securities sold under agreement to repurchase	5,603 0	16	20
Senior term financing	820 6	(0 3)	(7 0)
- -	6,4236	13	(5 0)
	12,629 1	(47 9)	(158)

There were no irreffective portions of cerivative fair value or cash flow hedging transactions recognised in the consolidated statement of income in either the years ended 31° December 2018 or 31° December 2017

Notes to the consolidated financial statements For the year ended 31st December 2018

32. Credit-related financial instruments

Credit-related financial instruments include commitments to extend credit, standby letters of credit and guarantees value are designed to meet the financing requirements of customers. The credit risk on these transactions is generally less than the contractual amount. The notional principal amounts of outstanding credit related contingent items and the risk-weighted exposures calculated in accordance with the CBB's Basel 3 guidelines were as follows -

	Notional principal amount	31.12.18 Risk- weighted exposure	Notional principal amount	31 12 17 Risk- weighted exposure
	US\$ millions	US\$ millions	US\$ millions	US\$ millions
Direct credit substitutes	780.8	765.1	672 3	654 3
Transaction-related contingent items	1,959.7	772.4	2,020 7	785 2
Short-term self-liquidating trade-related contingent items	290.6	46.1	515 2	878
Commitments, including undrawn loan commitments				
and underwriting commitments under note issuance and revolving facilities	1,505.3	691.5	1,819 7	830 2
	4,536.4	2,275.1	5,027 9	2,357 5

Commitments may be drawndown on demand

Direct credit substitutes at 31° December 2018 included financial guarantees amounting to 55:551.2 million (2017 US\$0.148 million). Financial guarantees may be called on demand Provisions in relation to credit-related financial instruments at 31° December 2018 amounted to US\$88.2 million (2017 US\$19.1 million).

The notional principal amounts reported above are stated gross before applying credit risk mitigants, such as cash collateral, guarantees and counter-indemnities. At 31 becember 2018, the Group held cash collateral, guarantees, counter indemnities or other high quality collateral in relation to credit-related contingent items amounting to US\$342.4 million (2017 US\$330.7 million)

33. Contingent liabilities

The Bank and its subsidiaries are engaged in litigation in various jurisdictions. The litigation involves claims by and against Group con panies which have a use, in the ordinary course of business. The directors of the Bank lafter reviewing the claims pending against Group comprises and baried on the advice of relevant professional legal advisors, are satisfied that the outcome of these claims will not have a material adverse effect on the financial position of the Croup

34. Capital adequacy

The Croip pudopted the Basic Bical ital adequicy namework with office thron 1. January 2015. The CBB's Basel Biguidelines became effective and January 2015 as the common framework for the implementation of the Basel Committee on Banking Supervision's (Basel Committee). Basel Bical adequacy framework for banks incorporated in the Kingdom of Bahrain. The Group complied with all externally imposed capital requirements for the years ended 31. December 2018 and 31. December 2017.

Notes to the consolidated financial statements For the year ended 31" December 2018

34. Capital adequacy (continued)

The risk asset ratio calculated in accordance with the CBB's Basel 3 guidelines was as follows -

		31.12.18		31 12 17

Notes to the consolidated financial statements

For the year ended 31st December 2018

34. Capital adequacy (continued)

For regulatory Basel 3 purposes, the Group has adopted the standardised approach for credit risk as mandated by CBB for all locally incorporated banks. For market risk, the Group uses the internal models approach. GIB applies the standardised approach for determining the capital requirement for operational risk.

In accordance with the capital adequacy guidelines of the CBB, revaluation gains and losses arising on the remeasurement to fair value of derivative cash flow ledging transactions are excluded from tier 1 capital, while unrealised gains and losses arising on the remeasurement to fair value of equity investment securities classified as fair value through other comprehensive income (FVTOCI) are included in tier 1 capital.

The Group calculates the regulatory capital requirement for general market risk using a Value-at-Risk model. The use of the internal model approach for the calculation of the capital requirement for general market risk has been approved by the Bank's regulator, the CBB. The multiplication factor to be applied to the Value at Risk calculated by the internal model has been set at 3.0 (2017–3.0) by the CBB, representing the regulatory minimum. The CBB market risk framework includes metrics such as a 'stressed VaR' measure in the calculation of the regulatory capital requirement.

Value at Risk is calculated based on a Ssi per cerit confidence level, a ten-day holding period and a tylelve-month historical observation period of unweighted data from the DataMetrics regulatory data set. Correlations across broad risk categories are excluded. Prescribed and floris in respect of specific risk are made to the general market risk. The regulator measure of market risk is multiplied by 12.5, the reciprocal of the 8 per cent international minimum capital ratio, to give market risk-weighted exposure on a basis consistent with credit risk weighted exposure.

The regulatory capital requirement for operational risk is calculated by the Group in accordance with the standardised applicatel. The regulatory capital requirement is calculated based on triange of linear occidence, range given 1240. 8 per cent, applied to the exerage grown control of the preceding three from call years for each of eight preceding of his incise. The

35. Fiduciary activities

The Group conducts investment management and other fiduciary additions on benaffior clich si Asicts held in trust or in a fiduciary cupacity are not as lets of the Group and accordingly have not been in cluded in the consolidated financial statements. The aggregate amount of the funds concerned at 31. December 2018 was US\$15,628.1 million (2017 US\$15,925.3 million).

The Group acts as fund manager to a number of investment funds. In its capacity as fund manager, the Group is entitled to performance and management fees. The Group maintains an investment in the funds.

The basis for non-consolidation is as follows -

- The investors are able to vote by simple majority to remove the Group as the fund manager, without cause, and the Group's aggregate economic interest is 20 per cent. As a result, the Group has concluded that it acts as agent for the investors in these cases, and therefore has not consolidated the fund.
- The Group has majority ownership of the fund, and while the fund meets the IFRS 10 criteria for consolidation, the Group has decided not to consolidate on grounds of materiality.

The maximum exposure to loss is equal to the carrying amount of the trading securities, which at 31 December 2018 amounted to US\$104.1 million (2017 US\$107.0 million)

36. Related party transactions

The Group is owned by the six Gulf Cooperative Council (GCC) governments, with the Public Investment Fund holding a majority (97.2 per cent) controlling stake. The Public Investment Fund is an investment body of the Kingdom of Saudi Arabia. At 31. December 2018, the Group reported deposits and their related interest expense of US\$1,663.5 million and US\$22.2 million respectively (2017. US\$1,104.2 million and US\$18.4 million respectively).

Here explains a close to sar observable controlled jointly, enrolled one gath \pm nHz/inHz/incomparable to those with other entities that are not government related.

The control of the co

Notes to the consolidated financial statements For the year ended 31" December 2018

36. Related party transactions (continued)

The compensation of key management personnel was as follows -

	2018	2017
	US\$ millions	US\$ millions
Short-term employee benefits	13.7	126
Post-employment benefts	0.7	09
	14.4	135

Key management personnel comprise members of the Board of Directors, the Group Chief Executive Officer and the Managing Directors of the Group

Post employment benefits principally comprise compensation paid to perso metion retirement or resignation from the services of the Group

37. Fair value of financial instruments

The Group's financial instruments are accounted for under the historical cost method with the exception of trading securities, equity investment securities and derivative financial instruments, which are accounted for at fair value. The fair value represents the price that would be received to sell an asset, or paid to transfer a liability, in an orderly transaction between market participants at the measurement date. Differences therefore can arise between book values under the historical cost method and fair value estimates. Underlying the definition of fair value is the presumption that the Group is a going concern without any intention or requirement to curtail materially the scale of its operation or to undertake a transaction on adverse terms. Generally accepted methods of determining fair value include reference to quoted prices (level 1 measurement) or to the pricing prevailing for similar financial instruments (level 2 measurement) and the use of unobservable inputs in estimation techniques such as discounted cash flow analysis (level 3 measurement).

The valuation methodologies applied are outlined below

37.1 Trading securities

The fair values of trading securities are based on quoted prices (level 1) or valuation techniques (level 2 or 3)

37.2 Investment securities

The fair values of equity investment securities are based on quoted prices (level 1) or valuation techniques (level 2 or 3). The fair values of debt investment securities are based on quoted market prices (level 1) and approximate the carrying values.

37.3 Loans and advances

The fair values (level 2) of loans on a floating interest rate basis are principally estimated at book value. The fair values (level 3) of impaired loans are estimated at the recoverable amount, measured as the present value of expected future cash flows discounted based on the Group's weighted average discount rate. The fair values of fixed rate loans are estimated on a discounted cash flow basis utilising discount rates equal to prevailing market rates of interest in the respective currencies for loans of similar residual maturity and credit quality. The fair values (level 2) approximate the carrying values.

37.4 Term financing

The fair value of term financing is cased on observable market data, including quoted market pieces for debt instruments issued by similarly rated financial institutions and with similar maturities, or estimated on a discounted cash flow basis utilising currently prevailing spreads for borrowings with similar maturities. The fair values (level 2) of senior term financing at 31st December 2018 approximate the carrying values.

37.5 Other on-balance sheet items

The fair values of foreign exchange and derivative financial instruments are based on market prices, discounted cash flow techniques or option pricing models as appropriate. The fair values of all other on-balance sheet assets and liabilities approximate their respective book values due to their short-term nature.

37.6 Credit-related contingent items

There was no material fair value excess or shortfall in respect of credit related off-balance sheet financial instruments, which include commitments to extend credit, standby letters of credit and guarantees, as the related future income streams reflected contracted fees and commissions actually charged at the balance sheet date for agreements of similar credit standing and maturity Impairment provisions made in respect of individual transactions where a potential for loss has been identified are included in provisions for the impairment of loans and advances.

Notes to the consolidated financial statements For the year ended 31st December 2018

37. Fair value of financial instruments (continued)

37.7 Valuation basis

the valuation basis for impensal assets and financial liabilities carried at fail value was as follows

	Valuation based on observable Quoted prices market data (level 1) (level 2)		Other valuation techniques (level 3)	
	US\$ millions	US\$ millions	US\$ millions	
At 31st December 2018				
Financial assets				
Trading securities	151.8	0.7	25.2	
Investment securities - equities	130.0	=	38.5	
Derivative financial instruments	-	219.1	-	
Financial liabilities				
Derivative finantial instruments	-	144.3	-	
At 31st December 2017				
Financial assets				
Trading securities	165 7	0 9	25 2	
Investment securities equities	108 4	-	62 3	
Der zative financial instruments	-	182 2	-	
Financial liabilities				
Derivative financial instruments	-	1315		

Quoted prices include prices obtained from lead managers, brokers and dealers. Investment securities valued based on other valuation techniques comprise private equity investments that have been valued based on price / earnings and price / book ratios, for limitar outrines, discourted or inflow techniques or other valuetion methodologies.

During the year ended 31: December 2018, the value of investment securities whose measurement was determined by other valuation techniques (level 3 measurement) decreased by US\$23.8 million (2017) decrease of US\$13.5 million). The decrease principally comprised changes in assigned valuations.

No train fersion to fithe *circl* 3 measurement classification occurred during the years ended 31. December 2018 and 31. December 2018. Similarly no transfers between level 1 and less 10 millar rement dia sific atoms, very made during the years ended 31. December 2018 and 31. December 2017.

Sensitivity of the ordering in the Grinal communication in the lower scategory is a consequence to other comprehensive income or total equity.

Notes to the consolidated financial statements

For the year ended 31st December 2018

38. Earnings per share

Basic earnings per share are calculated by dividing the net income attributable to the shareholders by the weighted average number of shares in issue during the year

	2018	2017
Net (loss) / income (US\$ millions)	(227.0)	700
Weighted average number of shares in issue (millions)	2,500	2,500
Basic earnings per share (US\$)	(0.09)	0 03

The diluted earnings per share is equivalent to the basic earnings per share set out above

39. Principal subsidiaries

The principal subsidiary companies were as follows -

	Principal activities	Country of incorporation
Gulf International Bank (UK) Limited	Asset management	United Kingdom
GIB Capital C J S C	Asset management and investment banking	Kıngdom of Saudı Arabıa
GIB Markets Limited	Treasury-related	Cayman Islands

The Group's ownership interest in the principal subsidiary companies was 100 per cent for the years ended 31° December 2018 and 31° December 2017

During the year ended 31" December 2017, GIB Capital's legal structure changed from a limited liability company (L L C) to a closed joint stock company (C J S C)

40. Average consolidated statement of financial position

The average consolidated statement of financial position was as follows

	31.12.18	31 12 17
	US\$ millions	US\$ millions

Risk management and capital adequacy report

Executive summary

The Central Bank of Bahrain (CBB) Basel 3 guidelines prescribe the capital adequacy framework for banks incorporated in the Kingdom of Bahrain GIB adopted Basel 3 from 1st January 2015 as required by the CBB

This Risk Management and Capital Adequacy report encompasses the Pillar 3 disclosure requirements prescribed by the CBB based on the Basel Committee's Pillar 3 guidelines. The report contains a description of GIB's risk management and capital adequacy policies and practices, including detailed information on the capital adequacy process.

For regulatory purposes, GIB has adopted the standardised approach for credit risk. GIB uses the internal models approach for market risk and the standardised approach for determining the capital requirement for operational risk.

The disclosed tier 1 and total capital adequacy ratios comply with the minimum capital requirements under the CBB's Basel 3 framework

GIB's total risk-weighted assets at 31° December 2018 amounted to US\$16,108.3 million. Credit risk accounted for 91.5 per cent, market risk 4.1 per cent and operational risk 4.4 per cent of the total risk-weighted assets. Tier 1 and total regulatory capital were US\$2,196.2 million and US\$2,341.4 million respectively

At 31st December 2018, G/B's tier 1 and total capital adequacy ratios were 13.6 per cent and 14.5 per cent respectively G/B aims to maintain a tier 1 capital adequacy ratio above 10.5 per cent and a total capital adequacy ratio in excess of 14.0 per cent

GIB views the Pillar 3 disclosures as an important contribution to increased risk transparency within the banking industry, and particularly important during market conditions characterised by high uncertainty. In this regard, GIB has provided more disclosure in this report than is required in accordance with the CBB's Pillar 3 guidelines in order to provide the level of transparency that is believed to be appropriate and relevant to the Group's various stakeholders and market participants.

All figures presented in this report are as at 31st December 2018 unless otherwise stated

Risk management and capital adequacy report 31st December 2018

1. The Basel 3 framework

The CBB's Basel 3 framework is based on three pillars, consistent with the Basel 3 framework developed by the Basel Committee, as follows -

- Pillar 1 the calculation of the risk-weighted assets (RWAs) and capital requirement
- Pillar 2 the supervisory review process, including the Internal Capital Adequacy Assessment Process (ICAAP)
- Pillar 3 the disclosure of risk management and capital adequacy information

1.1 Pillar 1

Pular I prescribes the balls for the calculation of the regulatory capital adequacy ratio. Pular I sess out the definition and calculations of the RWAs, and the derivation of the regulatory capital base. The capital adequacy ratio is calculated by dividing the regulatory capital base by the total RWAs.

With the introduction of Pillar 2, the CBB will implement a minimum ratio threshold to be determined for each institution individually, as described in more detail in the Pillar 2 section of this report. As at 31. December 2018, and pending firmly at on of the CBBs Pillar 2 guidelines at banks incorporated in Buhrairi are required to maintain a minimum capital adequacy ratio of 12.5 per cent and a tier 1 ratio of 10.5 per cent.

In the event that the capital adequacy ratio falls below 12.5 per cent, additional prudential reporting requirements apply and a formal action plan setting out the measures to be taken to restore the ratio above the target level is to be formulated and submitted to the CBB.

The table below summarises the approaches available for calculating RWAs for each risk type in accordance with the CBB's Basel 3 capital adequacy framework -

Approaches for determining regulatory capital requirements

Credit risk	Market risk	Operational risk
Standardised approach	Standardised approach	Basic indicator approach
	Internal models approach	Standardised approach

The approach applied by GIB for each risk type is as follows -

a) Credit risk

For regulatory reporting purposes, GIB applies the standardised approach for credit risk

The RWAs are determined by multiplying the credit exposure by a risk weight factor dependent on the type of counterparty and the counterparty's external rating, where available

b) Market risk

For the regulatory market risk capital requirement, GIB applies the internal models approach based on a Value-at-Risk (VaR) model. The use of the internal models approach for the calculation of regulatory market risk capital has been approved by the CBB.

c) Operational risk

Under the CBB's Basel 3 capital adequacy framework, all banks incorporated in Bahrain are required to apply the basic indicator approach for operational risk unless approval is granted by the CBB to use the standardised approach. The CBB's Basel 3 guidelines do not permit the use of the advanced measurement approach (AMA) for operational risk. The standardised approach for the calculation of regulatory operational risk capital has been approved by the CBB.

Trides the standing is supposed the regional, capital requirements is desirted by elementary content. Risk management and capital adequacy report 31" December 2018

The Basel 3 framework (continued)

1.2 Pillar 2

Pillar 2 defines the process of supervisory review of an institution's risk management framework and ultimately, its capital adequacy

Under the CBB's Pillar 2 guidelines, each bank is to be individually assessed by the CBB and an individual minimum capital adequacy ratio is to be determined for each bank. The CBB is yet to undertake the assessment exercises, which will allow their setting of higher minimum capital ratios based on the CBB's assessment of the financial strength and risk management practices of the institution. Currently, pending finalisation of the assessment process, all banks incorporated in Bahrain are required to maintain a 12 5 per cent minimum capital adequacy ratio and a tier 1 ratio of 10 5 per cent.

Pillar 2 comprises two processes -

- an Internal Capital Adequacy Assessment Process (ICAAP), and
- a supervisory review and evaluation process

The ICAAP incorporates a review and evaluation of risk management and capital relative to the risks to which the bank is exposed. GIB's capital assessment has been developed around its economic capital framework which is designed to ensure that the Group has sufficient capital resources available to meet regulatory and internal capital requirements, even during periods of economic or financial stress. The capital assessment addresses all components of GIBs risk management, from the daily management of more material risks to the strategic capital management of the Group.

The supervisory review and evaluation process represents the CBB's review of the Group's capital management and an assessment of internal controls and corporate governance. The supervisory review and evaluation process is designed to ensure that institutions identify their material risks and allocate adequate capital, and employ sufficient management processes to support such risks.

The supervisory review and evaluation process also encourages institutions to develop and apply enhanced risk management techniques for the measurement and monitoring of risks in addition to the credit, market and operational risks addressed in the core Pillar 1 framework. Other risk types which are not covered by the minimum capital requirements in Pillar 1 include -

- liquidity risk
- interest rate risk in the banking book (IRRBB)
- concentration risk
- pension obligation risk
- reputational risk
- Information technology risk
- macroeconomic risk
- legal risk
- strategic risk

These are covered either by capital, or risk management and mitigation processes under Pillar 2

1.3 Pillar 3

In the CBB's Basel 3 framework, the third pillar prescribes how, when, and at what level information should be disclosed about an institution's risk management and capital adequacy practices

The disclosures comprise detailed qualitative and quantitative information. The purpose of the Pillar 3 disclosure requirements is to complement the first two pillars and the associated supervisory review process. The disclosures are designed to enable stakeholders and market participants to assess an institution's risk appetite and risk exposures and to encourage all banks, via market pressures, to move toward more advanced forms of risk management.

Under the current regulations, partial disclosure consisting mainly of quantitative analysis is required during half year reporting, whereas fuller disclosure is required to coincide with the financial year end reporting

In this report, GIB's disclosures are beyond the minimum regulatory requirements and provide disclosure of the risks to which it is exposed both on- and off-balance sheet. The disclosures in this leport are in addition to the disclosures set out in the consolidated financial statements presented in accordance with International Financial Reporting Standards (IFRS).

Risk management and capital adequacy report 31st December 2018

2. Group structure, overall risk and capital management

This section sets out the consolidation principles and the capital base of GIB as calculated in accordance with the Pillar 1 guidelines, and describes the principles and policies applied in the management and control of risk and capital

2.1 Group structure

The Groups financial statements are prepared and published on a full consolidation basis, with all subsidiaries being consolidated in accordance with IFRS. For capital adequacy purposes, all subsidiaries are included within the Gulf International Bank BISIC Group structure. However, the CBB's capital adequacy methodology accommodates both normal and aggregation forms of consolidation.

Under the CBB capital adequacy framework, subsidiaries reporting under a Basel 3 framework in other regulatory jurisdictions may, at the bank's discretion, be consolidated based on that jurisdiction's Basel 3 framework, rather than based on the CBB's guidelines. Under this aggregation consolidation methodology, the risk-weighted assets of subsidiaries are consolidated with those of the rest of the Group based on the guidelines of their respective regulator to determine the Group's total risk-weighted assets.

GIB's principal subsidiary, Gulf International Bank (UK) Limited (GIBUK), is regulated by the Financial Conduct Authority (FCA) and the Prudential Regulation Authority (PRA) of the United Kingdom, and has calculated its risk weighted assets in accordance with the PRA's guidelines

The principal subsidiaries and basis of consolidation for capital adequacy purposes are as follows -

Subsidiary	Domicile	Ownership	Consolidation basis
Gulf International Bank (UK) Limited	United Kingdom	100%	Aggregation
GIB Capital C J S C	Saudi Arabia	100%	Full Consolidation
GIB Markets Limited	Cayman Islands	100%	Full Consolidation

No investments in subsidiaries are treated as a deduction from the Group's regulatory capital

2.2 Risk and capital management

GIB maintains a prudent and disciplined approach to risk taking by upholding a comprehensive set of risk management policies processes and limits, employing professionally qualified people, with the appropriate skills, investing in technology and training, and actively promoting a culture of sound risk management at all levels. A key tenet of this culture is the clear segregation of duties and reporting lines between personnel transacting business and personnel processing that business. The Group's risk is an agree entire or derpin ted by its ability to identify inleasure, aggregate and manage the different types of risk it faces.

The Board of Directors has created from among its members a Board Risk Policy Committee to review the Group's risk taking activities and report to the Board in this regard. The Board has the ultimate responsibility for setting the overall risk parameters and tolerances within which the Group conducts its activities, including responsibility for setting the capital ratio to gets. The Board reviews the Croup coverall risk profile or disignifical mask exposure as well as the Group's major risk policies, processes and controls.

The Management Continuitee change by the Chef Decouve Officer (CM) has the primary responsibility for skill being high taking policies and intrivities within the references accred by the Board. The errorp kink Committee assists the Management Committee in performing its risk related functions.

The var, up Risk of a rather index this charmone by of the interference CR or and computing the Group's cost senior risk professionals, provides a forum for the review and approval of new products, risk measurement methodologies and risk control processes. The Group Risk Committee also reviews all risk policies and limits that require approval by the consignation of or interference by Asset and Habitate Committee (Al. Carehandet), the Charles Firarria Cfficer μ of provides a forum for the review of asset and liability activities within GIB. It coordinates the asset and liability functions and across satisfactors of the condigeness μ of the condigeness μ of the review of asset and liability functions and across satisfactors.

From a control perspective, the process of risk management is facilitated through a set of independent functions, which report directly to senior management. These functions include Credit Risk, Market Risk, Operational Risk. Financial Control in Elin Linux 1 (2001). The main License of perspectives the effective to reasonical terms of perspectives.

Risk management and capital adequacy report 31st December 2018

2. Group structure, overall risk and capital management (continued)

2.2 Risk and capital management (continued)

Internal Audit is responsible for carrying out a risk-based programme of work designed to provide assurance that assets are being safeguarded. This involves ensuring that controls are in place and working effectively in accordance with Group policies and procedures as well as with laws and regulations. The work carried out by Internal Audit includes providing assurance on the effectiveness of the risk management functions, as well as that of controls operated by the business units. The Board Audit Committee approves the annual audit plan and also receives regular reports of the results of audit work.

The Group's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain future business development. The Group manages its capital structure and makes adjustments to the structure taking account of changes in economic conditions and strategic business plans. The capital structure may be adjusted through the dividend payout or the issue of new shares.

The CFO is responsible for the capital planning process. Capital planning includes capital adequacy reporting and the internal Capital Adequacy Assessment Process (ICAAP). The CFO is also responsible for the balance sheet management framework.

The governance structure for risk and capital management is set out in the table below -

Board	of	Dire	ctors
-------	----	------	-------

Board Audit Committee Board Risk Policy Committee

Group Chief Executive Officer

Management Committee (Chairman: CEO)

Group Risk Committee (Chairman: CRO) Assets and Liabilities Committee (Chairman: CFO)

Group Chief Financial Officer (CFO) Group Chief Risk Officer (CRO)

Balance sheet management framework Capital management framework

Risk management framework and policies Group credit control Credit risk Market risk Operational risk Liquidity risk

2.3 Risk types

The major risks associated with the Group's business activities are credit, market, operational and liquidity risk. These risks together with a commentary on the way in which the risks are managed and controlled are set out in the following sections, based on the Basel 3 pillar in which the risks are addressed.

2.4 Risk in Pillar 1

Pillar 1, which forms the basis for the calculation of the regulatory capital requirement, addresses three specific risk types credit, market and operational risk

Risk management and capital adequacy report 31" December 2018

2. Group structure, overall risk and capital management (continued)

2.4 Risk in Pillar 1 (continued)

a) Credit risk

Credit risk is the risk that a customer, counterparty or arrissuer of securities or other financial instruments falts to perform under its confractual payment obligations thus cousing the Group to suffer a loss in terms of cash flow or intarket value. Credit risk is the predominant risk type faced by the Group in its banking, investment and treasury activities, both on- and off-balance sheet. Where appropriate the Group seeks to minimise its credit exposure using a variety of technique, including, but not limited to, the following -

- entering netting agreements with counterparties that permit the off-etting of receivables and payables
- obtaining collateral
- seeking third party guarantees of the counterparty's obligations
- imposing restrictions and covenants on borrowers

credit rukurs activery managed and rigo ously monitoled in accordance, with well defined credit policies and procedures Prior to the approval of a credit proposal, a detailed credit risk assessment is undertaken which includes an analysis of the obligor's financial condition, wealthet position, business environment and quality of management. The risk assessment gone lites an internal credit risk rating for each counterparty system affects the credit approval decision and the terms and conditions of the transaction. For cross border transactions, an analysis of country risk is also conducted. The credit decision for an individual counterparty is based on the aggregate Group exposure to that counterparty and all its related entities. Groupwide credit limit setting and approval authorisation requirements are conducted within Board approved guidelines, and the measurement, monitoring and control of credit exposures are done on a Groupwide basis in a consistent mainner Overait rapposare ex al sate dia carsu cibroad diversification of credit ask. Poter traited action and skill be product, industry, single obligor, credit risk rating and geography are regularly assessed with a view to improving overall portfolio dicersification. Established trints and actual levels of exposure are regularly reviewed by the Chief Pisk Of icer (CRO) Chief Tredi Officer (CCO) and other member of serior managerier L. All credit exposures are reviewed at least once a year Credit policies and procedures are designed to identify, at an early stage, exposures which require more detailed monitoring and review. The credit risk associated with foreign exchange and derivative instruments is assessed in a manner similar to that associated with on-balance sheet activities. The Group principally utilises derivative transactions to facilitate customer transactions and for the management of interest and foreign exchange risks associated with the Group's longer term lending, borrowing and investment activities. Unlike on-balance sheet products, where the principal amount and interest generally represent the maximum credit exposure, the notional amount relating to a foreign exchange or derivative transaction typically exceeds the credit exposure by a substantial margin. The measure of credit exposure for foreign exchange and derivative instruments is therefore more appropriately considered to be the replacement cost at current market rates plus an add-on amount commensurate with the position's size, volatility and remaining life. Derivative contracts may also carry legal risk, the Group seeks to minimise these risks by the use of standard contract agreements

b) Market risk

Market risk is the risk of locoof value of a brancial risk in the entrol a portfolio of financial instruments as a result of advoced changes in market prices and rates, and market conditions such as liquidity. Market risk arises from the Group's trading, asset and liability management, and investment activities.

The categories of market risk to which the Group is exposed are as follows

Interest rate risk results from exposure to changes in the level, slope, curvature and volatility of interest rates and credit spreads. The credit spread risk is the risk that the interest yield for a security will increase, with a reduction in the security price, relative to benchmark yields as a result of the general market movements for that rating and class of security interest rate risk is the principal market risk faced by the Group and arises from the Group's investment activities in dobt securities, a set and include ity orangement and the rading of dept or confidence sheet derivative instruments.

Foreign exchange risk results from exposure to changes in the price and volatility of currency spot and forward rates. The principal foreign exchange risk arises from the Group's foreign exchange forward and derivative trading activities.

Equity risk arises from exposures to changes in the price and volatility of individual equities or equity indices

Let not be a control of the property of the second of the plant of the product of the second of the control of the product of

Risk management and capital adequacy report 31st December 2018

2. Group structure, overall risk and capital management (continued)

2.4 Risk in Pillar 1 (continued)

b) Market risk (continued)

A key element in the Group's market risk management framework is the estimation of potential future losses that may arise from adverse market movements. The Group utilises Value-at-Risk (VaR) to estimate such losses. The VaR is derived from quantitative models that use statistical and simulation methods that take account of all market rates and prices that may cause a change in a position's value. These include interest rates, foreign exchange rates and equity prices, their respective volatilities and the correlations between these variables. Effective September 2018, the Group's VaR is calculated using a historical based simulation. Previously, the Group's VaR was calculated on a Monte Carlo simulation basis using historical volatilities and correlations to generate a profit and loss distribution from several thousand scenarios.

The VaR takes account of potential diversification benefits of different positions both within and across different portfolios. Consistent with general market practice, VaR is computed for all financial instruments for which there are readily available daily prices or suitable proxies. VaR is viewed as an effective risk management tool and a valuable addition to the non-statistically based limit structure. It permits a consistent and uniform measurement of market risk across all applicable products and activities. Exposures are monitored against a range of limits both by risk category and portfolio and are regularly reported to and reviewed by senior management and the Board of Directors.

An inherent limitation of VaR is that past market movements may not provide an accurate prediction of future market losses. Historic analyses of market movements have shown that extreme market movements (i.e. beyond the 99 per cent confidence level) occur more frequently than VaR models predict. Stress tests are regularly conducted to estimate the potential economic losses in such abnormal markets. Stress testing combined with VaR provides a more comprehensive picture of market risk. The Group regularly performs stress tests that are constructed around changes in market rates and prices resulting from pre-defined market stress scenarios, including both historical and hypothetical market events Historical scenarios include the 1998 Russian crisis, the events of 9/11 and the 2008 credit crisis. In addition, the Group performs stress testing based on internally developed hypothetical market stress scenarios. Stress testing is performed for all material market risk portfolios.

c) Operational risk

Operational risk is the risk of loss arising from inadequate or failed internal processes, people and systems or from external events, whether intentional, unintentional or natural. It is an inherent risk faced by all businesses and covers a large number of potential operational risk events including business interruption and systems failures, internal and external fraud, employment practices and workplace safety, customer and business practices, transaction execution and process management, and damage to physical assets

Operational risk is a distinct risk category which the Group manages within acceptable levels through sound operational risk management practices that are part of the day-to-day responsibilities of management at all levels. Whilst operational risk cannot be eliminated in its entirety, the Group endeavours to minimise it by ensuring that a strong control infrastructure is in place throughout the organisation.

The objective in managing operational risk is to ensure control of the Group's resources by protecting the assets of the Group and minimising the potential for financial loss. The Group's risk management approach involves identifying, assessing managing, mitigating, monitoring and measuring the risks associated with all areas of the Group Control assessments are performed on all services of the Group with the participation of representatives from the relevant businesses, internal audit, legal and the risk and finance departments. Various policies, procedures and processes are used to manage operational risk and include effective staff training appropriate controls to safeguard assets and records regular reconciliation of accounts and transactions, appropriate budgeting, target setting and performance review, compliance to regulations, close monitoring of risk limits, segregation of duties, and financial management and reporting in addition, policies have been put in place to manage other control mitigation strategies for business continuity planning, insurance and legal risk (which includes regular reporting to management on legal matters)

Qualitative and quantitative methodologies and tools are used to identify and assess operational risk and to provide management with information for determining appropriate mitigating factors. These tools include a database of operational risk events categorised according to business lines and operational risk event types, a record of key risk indicators, which can provide an early warning of possible risk, and a risk and control assessment process to analyse business activities and identify operational risks related to those activities. The management of operational risk has a key objective of minimising the impact of losses suffered in the normal course of business (expected losses) and to avoid or reduce the likelihood of suffering a large extreme (unexpected) loss. There is a dedicated Operational Risk Lunction for the Group which reports into the Operational Risk Management Committee and Group Risk Committee. The Board meets on a quarterly basis and is updated on all relevant aspects of the business including operational risk management matters. High impact risks and issues of critical importance are reported to the Board.

Risk management and capital adequacy report 31" December 2018

2. Group structure, overall risk and capital management (continued)

2.5 Risk in Pillar 2

Other risk types are measured and assessed in Pillar 2 GIB measures and manages these risk types although they are not included in the calculation of the regulatory capital adequacy ratio. Most of the Pillar 2 risks are included in GIB's calculation of internal economic capital. Pillar 2 risk types include liquidity risk, interest rate risk in the banking book, business risk and concentration risk.

a) Liquidity risk

Equidity risk is the risk that sufficient funds ale not available to meet the Groups that distingly one on a palactual basis as they fail due. The lisk alises from the timing differences between the mutuity profiles of the Groups assets and liabilities it includes the risk of losses arising from the following -

- forced sale of assets at below normal market prices
- raising of deposits or borrowing funds at excessive rates the investment of surplus funds at below market rates

Liquidity management policies are designed to ensure that funds are available at all times to meet the funding requirements of the Group eventure of ense conditions. In normal conditions, the objective is to enter that there are sufficient funds exailable not unity to invest current francial commitments but also to facilitate but iness expansion. These objectives are met through the application of prudent liquidity controls. These controls provide access to funds without undue exposure to increased costs from the liquidation of assets or the aggressive bidding for deposits.

The Group's liquidity controls ensure that, ever the short-term the future profile of cash flows from maturing assets is adequately matched to the maturity of liabilities. Liquidity controls also provide for the maintenance of a stock of liquid and cadily realisable assets and adversing deposit base in terms of both majorities and large of depositors.

The management of liquidity and funding is primarily conducted in the Group's individual geographic entities within approved limits. This limits ensure that equivalent is as a flows occurring over the following 30 day period do not exceed the eligible stock of available liquid resources.

If is the Group's general policy that each gorgulablic enaily should be self-sufficient introduction or funding its own operations.

The Group's liquidity management policies include the following -

- the monitoring or () firture contractu. Least flows against approved limits, and (ii) the level of liquidire currier available in a stress event.
- the monitoring of balance sheet liquidity ratios
- the monitoring of the sources of funding incidento ensure that runding is derived from a civenified range of concess
 the monitoring of depositor concentrations in order to avoid undue reliance on individual depositors
 the maintenance of a crisfactory level of term financing.
- the maintenance of appropriate standby funding arrangements, and the maintenance of liquidity and funding contingency plans. These plans identify early indicators of stress conditions and prescribe the actions to be taken in the event of a systemic or other crisis, while minimising adverse long term implications for the Group's business activities.

b) Interest rate risk in the banking book

Structural interest rate risk arises in the Group's core balance sheet as a result of mismatches in the repricing of interest rate sensitive financial cosets and be test. The assected interest rate is no monaged within VaR in at land to ringly the sense of models to evaluate the sensitivity of earnings to movements in interest rates.

c) Concentration risk

v(a) of the policy of the plane degree of discept calls in its Legendra portion of the probability and pushness with large customers or not being equally exposed across industries and regions

Concentration risk is captured in GIB's Pillar 2 capital framework through the use of a credit risk portfolio model which considers single name concentrations and sector concentrations in the credit portfolio

Potential concentration risks by product, single obligor, and geography are regularly assessed with a view to improving overall period for the first selection of the first selection of the first selection of the Board of Directors.

Risk management and capital adequacy report 31* December 2018

2. Group structure, overall risk and capital management (continued)

2.5 Risk in Pillar 2 (continued)

d) Pension obligation risk

Pension obligation risk is the risk that there may be a shortfall with respect to pension benefits due to employees/former employees within the defined benefit scheme of the Group's wholly owned subsidiary, GIBUK

As part of GIB's ICAAP framework, an adverse scenario is applied to the scheme's assets and liabilities on a level of severity expected no more than once in every 200 years, i.e. a 99.5 per cent one year confidence level

e) Reputational risk

Reputational risk is the risk of losses resulting from adverse perceptions about the Group, its brand and franchise by its various stakeholders that is caused by a variety of internal and external factors. Preventive measures, including controls and processes have been deployed to manage reputational risk. These include a robust and comprehensive governance structure, which is based on set of well-defined policies and procedures.

f) Information Technology (IT) risk

Technology continues to play a critical role in the Bank's operations and in the fulfilment of its strategic objectives. The Group has in place a sound IT and Information Security governance framework that aligns its IT strategy and Information & Cyber Security Strategy with its overall business objectives.

g) Macroeconomic risk

Macroeconomic risk relates to the risk of increasing stress levels in the principal economies in which the Group operates. These risks can be triggered by political uncertainties, social unrests, high/low commodity prices, excessive leverage in the financial system or an uncompetitive business environment. Due to the systemic nature of these macroeconomic triggers, there will be an adverse impact on the Group's profit ibility and capital positions and the extent of loss would depend on the severity of the stress event.

Macroeconomic risk is captured in GIB's ICAAP framework through the use of stressed macroeconomic forecast to gauge the impact of potential losses that the Group could incur

h) Legal risk

In the ordinary course of its business, as a participant in the financial services industry, the Group may pursue litigation claims against third parties and may also have litigation claims and/or regulatory proceedings filed against it. The Bank has an in-house legal department comprising of qualified legal professionals. The department has put in place adequate policies and procedures and uses assistance of professional legal firms on need basis, to ensure effective and efficient management of legal risk.

2.6 Monitoring and reporting

The monitoring and reporting of risk is conducted on a daily basis for market and liquidity risk, and on a monthly or quarterly basis for credit and operational risk

Risk reporting is regularly made to senior management and the Board of Directors. The Board of Directors receives internal risk reports covering market, credit, operational and liquidity risks

Capital management, including regulatory and internal economic capital ratios, is reported to senior management and the Board of Directors on a monthly basis

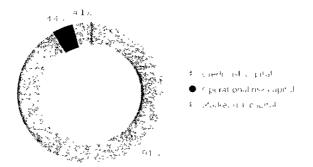

Risk management and capital adequacy report 31st December 2018

3. Regulatory capital requirements and the capital base

This section describes the Group's regulatory capital requirements and capital base

The composition of the total regulatory capital requirement was as follows -

3.1 Capital requirements for credit risk

For regulatory reporting purposes, GIB calculates the capital requirements for credit risk based on the standardised approach this standardised approach this standardised approach on- and on- palance sheet credit exposures are referred to in the CBB's Basel 3 capital adequacy framework as standard portfolios. The primary standard portfolios are claims on sovereigns, claims on banks and claims on corporates. Following the assignment of exposures to the relevant standard portfolios, the RWAs are derived based on prescribed risk-weightings. Under the standardised approach, the risk-weightings are provided by the CBB and are determined based on the counterparty's external credit rating. The external credit ratings are derived from eligible external rating agencies approved by the CBB. GIB uses ratings assigned by Standard & Poor's, Moody's and Fitch

An overview of the exposures, RWAs and capital requirements for credit risk analysed by standard portfolio is presented in the table below -

	Rated exposure	Unrated exposure	Total exposure	Average risk weight	RWA	Capital requirement
	US\$ millions	US\$ millions	US\$ millions	%	US\$ millions	US\$ millions
Sovereigns	10,392 3	-	10,392 3	1%	75 6	94
PSEs	198 4	-	198 4	-		=
Banks	7,560 9	-	7,560 9	23%	1,7149	2144
Corporates	3,243 0	9,7419	12,984 9	91%	11,830 1	1,4788
Equities		2275	227 5	120%	273 4	34 2
Past due loans	-	741 3	741 3	33%	2448	30 6
Other assets	43.4	539 5	582 9	105%	609 9	76 2
	21,438.0	11,250.2	32,688.2	45%	14,748.7	1,843.6

Exposures are stated after their glace out of credit inskining ants where applicable. The treining of the insert of credit instining of the explained in more detail in section 4.4(g) of this report.

Tredefication of extra adiabout includite elated PV Aria including a construction fold to report

3.2 Capital requirements for market risk

GIB uses a Value at-Risk (VaR) model to calculate the regulatory capital requirements relating to general market risk

The VaR calculated by the internal model is subject to a multiplication factor determined by the CBB. GIB's multiplication factor has been set at the regulatory minimum of 3.0 by the CBB.

Fig. 1 by $-dd^2$ contains specificary or made to consistent with credit risk weighted exposure on a basis consistent with credit risk weighted exposure

Risk management and capital adequacy report 31" December 2018

3. Regulatory capital requirements and the capital base (continued)

3.2 Capital requirements for market risk (continued)

The RWAs and capital requirements for market risk are presented in the table below -

	RWA	requirement	
	US\$ millions	US\$ millions	
Interest rate risk	101 0	126	
Equities	461 6	577	
Foreign exchange risk	12 7	16	
Total general market risk	575 3	719	
Total specific market risk	788	99	
	654.1	81.8	

The general market risk calculation includes the addition of stressed VaR in accordance with CBB guidelines

3.3 Capital requirements for operational risk

For regulatory reporting purposes, the capital requirement for operational risk is calculated in accordance with the standardised approach. Under this approach, the Group's average gross income over the preceding three financial years is multiplied by a range of beta coefficients. The beta coefficients are determined based on the business line generating the gross income and are prescribed in the CBB's Basel 3 capital adequacy framework and range from 12 to 18 per cent

The capital requirement for operational risk at 31st December 2018 amounted to US\$88.2 million

3.4 Capital base

The regulatory capital base is set out in the table below -

	CET 1 & Tier 1	Tier 2	Total	
	US\$ millions	US\$ millions	US\$ millions	
Share capital	2,500 0	-	2,500 0	
Share premium	7 6	-	76	
Compulsory reserve	225 8	-	2258	
Voluntary reserve	163 3	-	1633	
Retained earnings	(665 2)	-	(665 2)	
Unrealised losses from fair valuing equity investments	(33 4)	-	(33 4)	
Cash flow hedge reserve	(19)	-	(19)	
Collective impairment provisions	-	145 2	145 2	
Tier 1 and tier 2 capital base	2,196.2	145.2	2,341.4	

Common equity tier 1 (CET 1) and tier 1 capital is defined as capital of the same or close to the character of paid up capital and comprises share capital, share premium, retained earnings and eligible reserves. Eligible reserves exclude revaluation gains and losses arising on the remeasurement to fair value of derivative cash flow hedging transactions, although include uncalised gains and losses arising on the remeasurement to fair value of equity investment securities classified as fair value through other comprehensive income (FVTOCI). Regulatory capital deductions are applied to tier 1 and tier 2 capital with respect to investment exposures for entities where the Group does not own more than 10 per cent of the issued share capital of the entity air dito tier 1 capital to exclude any outstanding cash flow hedge reserves.

Tier 2 capital comprises collective impairment provisions

The CBB applies various limits to elements of the regulatory capital base. The amount of innovative tier 1 securities cannot exceed 15 per cent of total tier 1 capital, qualifying tier 2 capital cannot exceed tier 1 capital, and qualifying subordinated term finance cannot exceed 50 per cent of tier 1 capital. There are also restrictions on the amount of collective impairment provisions that may be included as part of tier 2 capital.

There are no impediments on the transfer of funds or regulatory capital within the Group other than restrictions over transfers of statutory deposits with central banks and safeguards to ensure minimum regulatory capital requirements are met for subsidiary companies

Risk management and capital adequacy report 31st December 2018

4. Credit risk - Pillar 3 disclosures

This section describes the Group's exposure to credit risk and provides detailed disclosures on credit risk in accordance with the CBB's Basel 3 framework in relation to Pillar 3 disclosure requirements

4.1 Definition of exposure classes

GIB has a diversified on- and off-balance sheet credit portfolio, the exposures of which are divided into the counterparty exposure classes defined rivine CBBs Ballot 3 capital adequacy frumework for the standard portfolios in the CBB's Basel 3 capital adequacy framework, and the generic treatments, i.e. the risk weights to be used to derive the RWAs, are as follows -

Sovereigns portfolio

The sovereigns portfolio comprises exposures to governments and their respective central banks. The risk weights are 0 per cent for exposures in the relevant domestic currency, or in any currency for exposures to GCC governments. Foreign currency claims on other sovereigns are risk-weighted based on their external credit ratings.

Certain multilateral development banks as determined by the CBB may be included in the sovereigns portfolio and treated as exposures with a 0 per cent risk-weighting

PSE portfolio

Public sector entities (PSEs) are risk weighted according to their external ratings with the exception of Bahrain PSEs, and domestic currency claims on other PSEs which are assigned a 0 per cent risk weight by their respective country regulator

Banks portfolio

Claims on banks are risk-weighted based on their external credit ratings. A preferential risk weight treatment is available for rular foling short term exposures. Short term exposures are defined as exposures with an angle after or of three months or less.

Le Canis portfolicialso inclui es clains on riveste ient firms, which are risk-weighted based on their external credit ratings although without any option for preferential treatment for short-term exposures. A regulatory deduction is applied to investment exposures for entities where the Group does not own more than 10 per cent of the issued share capital of the bank.

Corporates portfolio

Claims on corporates are risk-weighted based on their external credit ratings. A 100 per cent risk weight is assigned to unrated corporate exposures. A preferential risk weight treatment is available for certain corporates owned by the Government of Bahrain, as determined by the CBB, which are assigned a 0 per cent risk weight.

Equities portfolio

The equities portfolio comprises equity investments in the banking book, i.e. in the investment securities portfolio and non-qualifying equities and runds in the frading portfolio. The check (specific) issued for qualifying equities in the trading book is included in market risk RWAs for regulatory capital adequacy calculation purposes. A regulatory deduction is applied to investment exposures for entities where the Group does not own more than 10 per cent of the issued share capital of the entity.

A 100 per cent risk weight is assigned to listed equities and funds. Unlisted equities and funds are risk-weighted at 150 per cent. Investments in rated funds are risk weighted according to their external credit rating.

In addition to the standard portfolios, other exposures are assigned to the following exposure classes -

Past due exposures

All privador correspondence pectice of the categorist bin of the exponent to creptify only preich a field separately under the past due exposures asset class. A risk weighting of either 100 per cent or 150 per cent is applied depending on the level of provision maintained against the loan.

Other assets and holdings of securitisation tranches

Cash balances are risk-weighted at 0 per cent, other assets are risk-weighted at 100 per cent. A credit valuation adjustment (CVA) is applied to applicable derivative exposures.

Securitisation tranches are risk-weighted based on their external credit ratings and tenor. Risk weightings range from 20 per cent to 1250 per cent.

Risk management and capital adequacy report 31st December 2018

4. Credit risk - Pillar 3 disclosures (continued)

4.2 External rating agencies

GIB uses ratings issued by Standard & Poor's, Moody's and Fitch to derive the risk-weightings under the CBB's Basel 3 capital adequacy framework. Where ratings vary between rating agencies, the highest rating from the lowest two ratings is used to derive the risk-weightings for regulatory capital adequacy purposes.

4.3 Credit risk presentation under Basel 3

The credit risk exposures presented in this report may differ from the credit risk exposures reported in the consolidated financial statements. Differences arise due to the application of different methodologies, as illustrated below -

- Under the CBB's Basel 3 framework off-balance sheet exposures are converted into credit exposure equivalents by
 applying a credit conversion factor (CCF). The off-balance sheet exposure is multiplied by the relevant CCF applicable
 to the off-balance sheet exposure category. Subsequently, the exposure is treated in accordance with the standard
 portfolios referred to in section 4.1 of this report in the same manner as on-balance sheet exposures.
- Credit risk exposure reporting under Pillar 3 is frequently reported by standard portfolios based on the type of counterparty. The financial statement presentation is based on asset class rather than the relevant counterparty. For example, a loan to a bank would be classified in the Banks standard portfolio under the capital adequacy framework although is classified in loans and advances in the consolidated financial statements.
- Certain eligible collateral is applied to reduce exposure under the Basel 3 capital adequacy framework, whereas no such
 collateral netting is applicable in the consolidated financial statements.
 Based on the CBB's Basel 3 guidelines, certain exposures are either included in, or deducted from, regulatory capital
 rather than treated as an asset as in the consolidated financial statements.
- Under the CBB's Basel 3 capital adequacy framework, external rating agency ratings are based on the highest rating from the lowest two ratings, while for internal credit risk management purposes the Group uses the lowest rating

4.4 Credit exposure

a) Gross credit exposure

The gross and average gross exposure to credit risk before applying collateral, guarantees, and other credit enhancements was as follows:-

	Gross credit exposure	Average gross credit exposure
	US\$ millions	US\$ millions
Balance sheet items:		
Cash and other liquid assets (including cash balances)	5,114 2	6,416.4
Securities purchased under agreements to resell	1,015 9	9377
Placements	6,770 8	5,592 9
Trading securities	177 7	192 3
Investment securities	3,897 2	3,948 0
Loans and advances	9,8178	10,2620
Accrued interest and fees receivable	265 8	2268
Total on-balance sheet credit exposure	27,059.4	27,576.1
Off-balance sheet items:		
Credit-related contingent items	4,536 4	4,847 6
Derivative and foreign exchange instruments	623 6	494 5
Total off-balance sheet credit exposure	5,160.0	5,342.1
Total gross credit exposure	32,219.4	32,918.2

Risk management and capital adequacy report 31st December 2018

4. Credit risk – Pillar 3 disclosures (continued)

4.4 Credit exposure (continued)

a) Gross credit exposure (continued)

The average gross credit exposure is based on monthly averages during the year ended 31' December 2018

The gross credit exposure for derivative and foreign exchange instruments is the replacement cost (current exposure) representing the cost of replacing the contracts at current market rates should the counterparty default prior to the settlement date. The gross credit exposure reported in the table above does not include potential future exposure. Further data is on the counterparty credit risk relating to off-bulance sheet exposures are set out in section 7.3(a) of this report

b) Credit exposure by geography

The classification of credit exposure by geography based on the location of the counterparty was as follows -

	Placements, reverse repos & other liquid assets	Securities	Loans and advances	Accrued interest-fees receivable	Off-balance sheet items	Total
	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions
GCC	4,301 2	2,778 0	9,603 6	133 4	4,2588	21,075 0
Europe	7,028 5	385 4	1377	116 4	466 6	8,1346
North America	1,2387	430 6	28 3	110	397 9	2,106 5
Asia	332 5	465 2	46 2	50	35 4	884 3
Latin America	-	122		=		12 2
MENA (excluding GCC)	-	35	2 0		1 3	68
	12,900.9	4,074.9	9,817.8	265.8	5,160.0	32,219.4

The MENA region comprises the Middle East and North Africa

c) Credit exposure by industrial sector

The classification or credition osure by indistinct sector was all follows -

	Placements, reverse repos & other liquid assets	Securities	Loans and advances	Accrued interest-fees receivable	Off-balance sheet items	Total
	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions
Government	7,707 9	2,2180	1200	27 6	246	10,098 1

4. Credit risk - Pillar 3 disclosures (continued)

4.4 Credit exposure (continued)

d) Credit exposure by internal rating (continued)

Following the adoption of IFRS $\overline{9}$ - Financial Instruments, the Group has classified credit exposures in the following prescribed stages -

- Stage 1 for finencial instruments where there has not been a sign fical time ease in credit risk ince initial recognition and that are not credit-impaired on origination, the Group recognises an allowance based on 12 month expected credit losses
- Stage 2 for financial instruments where there has been a significant increase in credit risk since introl recognition but
 they are not credit-impaired, the Group recognises an allowance for the lifetime expected credit losses.
 Stage 3 for credit impaired financial instruments, the Criup recognises the lifetime expected credit losses.

The analysis is presented prior to the application of credit risk mitigation techniques

The Group's internal credit rating system is commented on in more detail in section 4.7 of this report

e) Credit exposure by maturity

The maturity profile of funded cledities place is birred on contractual maturity date. Was as follows:

	Placements, reverse repos & other liquid assets	Securities	Loans and advances	Accrued interest-fees receivable	Total
	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions
Within 3 months	11,240 6	1495	4,056 0	2218	15,667 9
4 months to 1 year	1,660 3	3800	1,902 9	440	3,987 2

f) Equities held in the banking book

Equity investments included in investment securities in the consolidated balance sheet are included in the equities standard portfolio in the Pillar 1 credit risk capital adequacy framework. Such equity investment securities principally comprise listed equities received in settlement of a past due loan, investments of a private equity nature, and investments in funds managed by specialist managers.

At 31° December 2018, equity investment securities held in the banking book amounted to US\$168.5 million, of which US\$123.6 million comprised listed equities received in settlement of a secured past due loan and US\$11.0 million comprised managed funds.

During the year ended 31 December 2018, US\$1.2 million of gains were realised on equity investments. At 31 December 2018, net unrealised losses on equity investment securities amounted to US\$33.4 million and are included as a deduction from tier 1 capital.

Risk management and capital adequacy report 31* December 2018

4. Credit risk - Pillar 3 disclosures (continued)

4.4 Credit exposure (continued)

g) Credit risk mitigation

The credit exposure information presented in section 4 of this report represents gross exposures prior to the application of any credit risk mitigants. Collateral items and guarantees which can be used for credit risk mitigation under the capital adequacy framework are referred to as eligible collateral. Only certain types of collateral and some issuers of guarantees are eligible for preferential risk weights for regulatory capital adequacy purposes. Furthermore, the collateral management process and the terms in the collateral agreements have to fulfil the CBB's prescribed minimum requirements. (Such as procedures for the monitoring of market values, insurance and legal certainty) set out in their capital adequacy regulations.

The reduction of the capital requirement attributable to credit risk mitigation is calculated in different ways, depending on the type of credit risk mitigation, as follows -

- Adjusted exposure amount. GIB uses the comprehensive method for financial collateral such as cash, bonds and shares
 The exposure amount is adjusted with regard to the financial collateral, the size of the adjustment depends on the
 volatility of the collateral and the exposure GIB uses volatility adjustments specified by the CBB, known as supervisory
 haircuts, to reduce the benefit of collateral and to increase the magnitude of the exposure.
- Substitution of counterparty. The substitution method is used for guarantees, whereby the rating of the counterparty is substituted with the rating of the guarantor. This means that the credit risk in respect of the counterparty is substituted by the credit risk of the guarantor and the capital requirement is thereby reduced. Hence, a fully guaranteed exposure will be assigned the same capital treatment as if the exposure was to the guarantor rather than to the counterparty.

Description of the main types of credit risk mitigation

GIB uses a variety of credit risk mitigation techniques in several different markets which contribute to risk diversification and credit protection. The different credit risk mitigation techniques such as collateral, guarantees, credit derivatives, netting agreements and covenants are used to reduce credit risk. All credit risk mitigation activities are not necessarily recognised for capital adequacy purposes as they are not defined as eligible under the CBB's Basel 3 capital adequacy framework, e.g. covenants and non-eligible tangible collateral such as unquoted equities. The recognised credit risk mitigation activities are undertaken with various counterparties to ensure no additional credit or market risk concentrations occur.

Exposures secured by eligible financial collateral, guarantees and credit derivatives, presented by standard portfolio were as follows -

	Exposure before credit risk mitigation	Eligible collateral	Of which secured by: Eligible guarantees or credit derivatives
	US\$ millions	US\$ millions	US\$ millions
Sovereigns	112 1		1121
Banks	2,654 2	2,058 6	327 1
Corporates	603 4	1447	-

Guarantees and credit derivatives

Only eligible providers of guarantees and credit derivatives may be recognised in the standardised approach for credit risk Guarantees issued by corporate entities may only be taken into account if their rating corresponds to A- or higher. The guaranteed exposures receive the risk weight of the guarantor.

GIB uses credit derivatives as credit risk protection only to a limited extent as the credit portfolio is considered to be well diversified

Collateral and valuation principles

The amount and type of collateral is dependent upon the assessment of the credit risk of the counterparty. The market/fair value of the collateral is actively monitored on a regular basis and requests are made for additional collateral in accordance with the terms of the facility agreements. In general, lending is based on the customer's repayment capacity rather than the collateral value. However, collateral is considered the secondary alternative if the repayment capacity proves inadequate. Collateral is not usually held against securities or placements.

Types of eligible collateral commonly accepted

The Group holds collateral against loans and advances in the form of physical assets, cash deposits, securities and guarantees

Risk management and capital adequacy report 31st December 2018

4. Credit risk - Pillar 3 disclosures (continued)

4.5 Impaired credit facilities and provisions for impairment

Individually impaired financial assets represent assets for which there is objective evidence that the Group will not collect all amounts due, including both principal and interest, in accordance with the contractual terms of the obligation. Objective evidence that a minancial asset is impaired may include a preach of centract such as default or delinquency in it terest or principal rayments, the graining of a concersion that for economic or legal reasons relating to the between 5 financial difficulties, would not otherwise be considered, indications that it is probable that the borrowers that enter the disappearance of an active market or other observable data relating to a group or assets such as adverse changes in the payment status of borrowers or issuers in the group, or economic conditions that correlate with defaults in the group.

Provision for impairment are determined based on the difference between the net carrying amount and the recoverable amount of a financial lisset. The recoverable amount is measured as the present value of expected betwee cash flows including amounts recoverable from guarantees and collateral.

Provisions for impairment are also measured and recognised on a collective basis in respect of expected credit losses and are classified a leit lengtage 1 or stage 2 in accordance with IERS 9.

The stage 1 and stage 2 provisions refiert the probability lying the estimate of expected credit losses. The provisions comprise both quantitative and qualitative information and analysis, based on the Group's historical experience and taking into consideration both internal and external indicators and includes forward looking information.

Expressions for in paint enture recognised in the consolidated state mention in one and cremeted durantal cwar celaccount against loans and advances, investment securities and placements

a) Impaired loan facilities and related provisions for impairment

Impaired loan facilities and the related provisions for impairment were as follows -

	Gross exposure US\$ millions	Impairment provisions US\$ millions	Net exposure US\$ millions
Corporate ₅	6270	611 2	158
Financial sector	22 2	12 1	10 1
	649.2	623.3	25.9

The impaired loan facilities were principally to counterparties in the GCC

b) Provisions for impairment - loans and advances

The movements in the provisions for the impairment of loans and advances were as follows -

	Specific provisions	Collec provisi			
	Stage 3	Stage 1	Stage 2	Total	
	US\$ millions	US\$ millions	US\$ millions	US\$ millions	
At 1st January	2610	46 3	106 3	4136

Transfer to stage 2		(7.4)	14		
Transfer to stage 3	25 9		(25 9)		
Amounts utilised	(2 2)			(2.2)	
Exchange rate movements	(0 6)			(0 6)	
Net remeasurement of loss allowance	339 2	(8 9)	228	353 1	
At 31st December	623.3	30.5	110.1	763.9	

Risk management and capital adequacy report 31" December 2018

4. Credit risk - Pillar 3 disclosures (continued)

4.5 Impaired credit facilities and provisions for impairment (continued)

c) Impaired investment securities and related provisions for impairment

There were no impaired debt investment securities at 31st December 2018

d) Provisions for impairment - investment securities

The movements in the provisions for the impairment of investment securities were as follows,-

	Specific Collective provisions provisions				
	Stage 3	Stage 1	Stage 2	Total	
	US\$ millions	US\$ millions	US\$ millions	US\$ millions	
At 1st January and 31st December 2018	_	45	_	45	

At 31st December 2018, the provisions for the impairment of investment securities entirely comprised non-specific provisions for debt investment securities determined on a collective basis.

4.6 Past due facilities

In accordance with guidelines issued by the CBB, credit facilities are placed on non-accrual status and interest income suspended when either principal or interest is overdue by 90 days whereupon unpaid and accrued interest is reversed from income Interest or non-accrual facilities is included in income only when received. Credit facilities classified as past due are assessed for impairment in accordance with the IFRS guicelines as set out in section 4.5 of this report. A specific provision is established only where there is objective evidence that a credit facility is impaired.

a) Loans

The gross and carrying amount of loans for which either principal or interest was over 90 days past due were as follows -

	Gross	Carrying amount
	US\$ millions	US\$ millions
Corporates	7191	1079
Financial sector	22 2	10 1
	741.3	118.0

The past due loan facilities were principally to counterparties in the GCC

The overdue status of gross past due loans based on original contractual maturities were as follows -

	Less than 1 year US\$ millions	Years 2 and 3 US\$ millions	Over 3 years US\$ millions	Total US\$ millions
Corporates	267 5	297 5	1541	7191
Financial sector	-	15 8	6 4	22 2
	267.5	313.3	160.5	741.3

b) Investment securities

There were no debt investment securities for which either principal or interest was over 90 days past due

Risk management and capital adequacy report 31" December 2018

4. Credit risk – Pillar 3 disclosures (continued)

4.7 Internal ratings

The Group monitors, manages and controls credit risk exposures based on an internal credit rating system that rates individual obligors based on a rating scale from 1 to 10, subject to positive (-) and negative (-) modifiers for rating grades 2 to 6. The internal credit rating is a measure of the credit-worthiness of a single obligor, based on an assessment of the credit risk relating to senior unsecured, medium-term, foreign currency credit exposure. The primary objectives of the internal credit rating system are the maintenance of a single uniform standard for credit quality measurement, and to serve as the primary basis for Board-approved risk parameters and delegated credit authority limits.

The internal credit rating system is used throughout the organisation and is inherent in all business decisions relating to the extension of credit. A rating is an estimate that exclusively reflects the quantification of the repayment capacity of the customer, relicherisk of customer default. The internal credit rating system also serves as a key input into the Group's Risk Adjusted Return on Capital (RAROC) performance measurement system. Ratings, effect a medium-cernit memorizon, thereby rating through an economic cycle.

The internal ratings map directly to the rating grades used by the international credit rating agencies as illustrated below -

Internal rating grade	Internal classification	Fitch and Standard & Poor's	Moody's
Investment grade			
Rating grade 1	Standard	AAA	Aaa
Rating grade 2	Standard	AA	Aa
Rating grade 3	Standard	Λ	Α
Rating grade 4	Standard	BBB	Baa
Sub-investment grade			
Rating grade 5	Standard	BB	Ba
Rating grade 6	Standard	В	В
Rating grade 7	Standard	CCC	Caa
Classified			
Rating grade 8	Substandard	CC	Ca
Rating grade 9	Doubtful	С	С
Rating grade 10	Loss	D	-

If cliating mapping does not intoncito let coll that there is a foremic ationship between SIPS if to real rating grodes and those of the external agencies as the rating approaches a fifer

5. Market risk - Pillar 3 disclosures

5.1 Market risk

Market risk is the risk of loss due to adverse changes in interest rates, foreign exchange rates, commodity prices, equity prices and market conditions, such as liquidity. The principal market risks to which the Group is exposed are interest rate risk and foreign exchange risk associated with its trading, investment and asset and liability management activities. The portfolioreffects of holding is considering exchange or instrument, as no instance of this new section in the potential negative impact on earnings from market risk factors.

The Group's trading and foreign exchange activities principally comprise trading in debt securities, foreign exchange and derivate to the state of the securities of the securities of the securities and controls follows for each of the securities and foreign exchange markets. The Group manages and controls the market risk within its trading portfolios through limit structures of both a VaR and non VaR nature. Non-VaR based constraints relate, inter-alia, to positions, volumes, concentrations, allowable losses and maturities.

Risk management and capital adequacy report 31st December 2018

5. Market risk - Pillar 3 disclosure (continued)

5.2 VaR model

A key element in the Group's market risk management framework is the estimation of potential future losses that may arise from adverse market movements. Exposure to general market risk is calculated utilising a VaR model. The use of the internal model approach for the calculation of the capital requirement for general market risk has been approved by the CBB. The multiplication factor to be applied to the VaR calculated by the internal model has been set at the regulatory minimum of 3.0 by the CBB.

From April 2012, the CBB has required that the VaR used for regulatory capital adequacy purposes incorporate a stressed VaR measure. This measure is intended to replicate the VaR for the Group's market risk exposures during periods of stress. The stressed VaR is increased by the multiplication factor and then added to the actual VaR to determine the regulatory capital requirement for market risk.

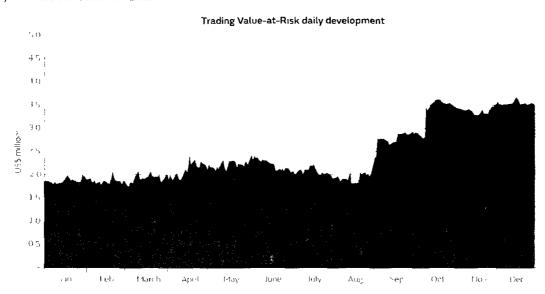

A key objective of asset and liability management is the maximisation of net interest income through the proactive management of the asset and liability repricing profile based on anticipated movements in interest rates. VaR-based limits are utilised to manage the risk associated with fluctuations in interest earnings resulting from changes in interest rates. The asset and liability repricing profile of the various asset and liability categories is set out in section 8.1(c) of this report.

For internal risk management purposes, the Group measures losses that are anticipated to occur within a 95 per cent confidence level Internally, the Group measures VaR utilising a one-month assumed holding period for both trading and banking book positions. For regulatory capital adequacy purposes, the figures are calculated using the regulatory VaR basis at a 99 per cent confidence level (2.33 standard deviations) and a ten-day holding period using one-year unweighted historical daily movements in market rates and prices. Correlations across broad risk categories are excluded for regulatory capital adequacy purposes.

The VaR for the Group's trading positions as calculated in accordance with the regulatory parameters set out above, was as follows -

	31.12.18 US\$ millions	Average US\$ millions	High US\$ millions	Low US\$ millions
Total VaR	35	2 4	37	18
Total undiversified stressed VaR	9.8	7 2	10 5	5 1

The graph below sets out the total VaR for all the Group's trading activities at the close of each business day throughout the year ended 31st December 2018 -

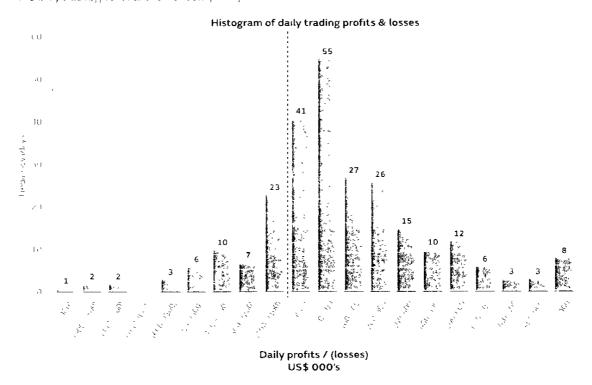

Risk management and capital adequacy report 31* December 2018

5. Market risk – Pillar 3 disclosure (continued)

5.2 VaR model (continued)

The daily trading profits and lesses during the year ended 31" December 2018 are summarised as follows -

The Group conducts daily VaR back testing both for regulatory compliance purposes and for the internal evaluation of VaR against according profits and losses. Liming the year eneed 31d December 2018, there were no instances of a daily trading loss exceeding the trading VaR at the close of business on the previous business day.

the live large steading sees during the year or defined December 2018 compared to the 1-day VaR at the close of business on the previous business day were as follows:

	Daily trading losses		
	US\$ thousands	US\$ thousands	
11 October	1,389	897	
12' October	879	1,108	
5" September	871	615	
13' ' August	750	609	
14 September	/11	630	

5.3 Sensitivity analysis

The sensitivity of the interest rate risk in the banking book to changes in interest rates is set out in section 8.1(c) of this report

The Group's investment debt securities are measured at amortised cost. However, the Group nevertheless monitors the impact of changes in credit spreads on the fair value of the debt securities.

Risk management and capital adequacy report 31" December 2018

6. Operational risk - Pillar 3 disclosures

6.1 Operational risk

Whilst operational risk cannot be eliminated in its entirety, the Group endeavours to minimise it by ensuring that a strong control infrastructure is in place throughout the organisation. The various procedures and processes used to manage operational risk include effective staff training, appropriate controls to safeguard assets and records, regular reconciliation of accounts and transactions, close monitoring of risk limits, segregation of duties, and financial management and reporting in addition, other control strategies, including business continuity planning and insurance, are in place to complement the procedures, as applicable

As part of the Group's Operational Risk Management Framework (ORMF), comprehensive risk self-assessments are conducted, which identify the operational risks inherent in the Group's activities, processes and systems. The controls in place to mitigate these risks are also reviewed, and enhanced as necessary. A database of measurable operational risk events is maintained, together with a record of key risk indicators, which can provide an early warning of possible operational risk.

The Group has an independent operational risk function. As part of the Group's Operational Risk Management Framework (ORMF), comprehensive risk assessments are conducted, which identify operational risks inherent in the Group's activities, processes and systems. The controls in place to mitigate these risks are also reviewed, and enhanced if necessary

The capital requirement for operational risk is calculated for regulatory purposes according to the standardised approach, in which the regulatory capital requirement is calculated based on a range of beta coefficients, ranging from 12 to 18 per cent, applied to the average gloss income for the preceding three financial years for each of eight predefined business lines. Consequently, the operational risk capital requirement is updated only on an annual basis.

7. Off-balance sheet exposure and securitisations

Off-balance sheet exposures are divided into two exposure types in accordance with the calculation of credit risk RWAs in the CBB's Basel 3 capital adequacy framework -

- Credit-related contingent items Credit related contingent items comprise guarantees, credit commitments and unutilised approved credit facilities
- Derivative and foreign exchange instruments. Derivative and foreign exchange instruments are contracts, the value of which is derived from one or more underlying financial instruments or indices, and include futures, forwards, swaps and options in the interest rate, foreign exchange, equity and credit markets.

In addition to counterparty credit risk measured within the Basel 3 credit risk framework, derivatives also incorporate exposure to market risk and carry a potential market risk capital requirement, as commented on in more detail in section 5 of this report. A credit valuation adjustment (CVA) is applied to the relevant derivative exposure RWA's

For the two off-balarice exposure types, there are different possible values for the calculation base of the regulatory capital requirement, as commented on below -

7.1 Credit-related contingent items

For credit-related contingent items, the notional principal amount is converted to an exposure at default (EAD) through the application of a credit conversion factor (CCF). The CCF factors range from 20 per cent to 100 per cent depending on the type of contingent item, and is intended to convert off-balance sheet notional amounts into equivalent on-balance sheet exposures.

Credit commitments and unutilised approved credit facilities represent commitments that have not been drawndown or utilised. The notional amount provides the calculation base to which a CCF is applied for calculating the EAD. The CCF ranges between 0 per cent and 100 per cent depending on the approach, product type and whether the unutilised amounts are unconditionally cancellable or irrevocable.

Risk management and capital adequacy report 31" December 2018

7. Off-balance sheet exposure and securitisations (continued)

7.1 Credit-related contingent items (continued)

The table below summarises the notional principal amounts, RWAs and capital requirements for each credit-related contingent category -

	Notional principal amount	RWA	Capital requirement
	US\$ millions	US\$ millions	US\$ millions
Direct credit substitutes	7808	765 1	95 6
Transaction-related contingent items	1,959 7	772 4	96 6
Short-term self-liquidating trade-related contingent items	290 6	46 1	58
Commitments	1,505 3	6915	86 4
	4,536.4	2,275.1	284.4

Commitments include undrawn loan commitments and underwriting commitments under note issuance and revolving facilities, and may be drawndown on demand

The notional principal amounts reported above are stated gross before applying credit risk mitigants, such as cash collateral, guarantees and counter indemnities. At 31' December 2018, the Group held cash collateral, guarantees, counter indemnities or other high quality collateral in relation to credit related contingent items amounting to US\$342.4 million

7.2 Derivative and foreign exchange instruments

The Group utilises derivative and foreign exchange instruments to meet the needs of its customers, to generate trading revenues and as part of its asset and liability management activity to hedge its own exposure to market risk. Derivative and foreign exchange instruments, are suspect to the same types of credit and market risk as other financial instruments. The Group has appropriate and comprehensive Board, approved policies and procedures for the control of exposure to both credit, and market risk from its derivative and foreign exchange activities.

In the case of derivative transactions, the notional principal typically does not change hands. It is simply a quantity which is used to calculate payments. While notional principal is a volume measure used in the derivative and foreign exchange markets, it is neither a measure of market nor credit risk. The Group's measure of credit exposure is the cost of replacing contracts at current market rates should the counterparty default prior to the settlement date. Credit risk amounts represent the gross unrealised gains on non-margined transactions before taking account of any collateral held or any master netting agreements in place.

The Group participates in both exchange traded and over the counter (OTC) derivative markets. Exchange traded instruments are executed through a recognised exchange as standardised contracts and primarily comprise futures and options. Of contracts are executed between two counterparties who negotiate specific agreement terms, including the underlying instrument, notional amount, maturity and, where appropriate, exercise price. In general, the terms and conditions of these transactions are tailored to the requirements of the Group's customers although conform to normal market practice. Industry standard documentation is used, most commonly in the form of a master agreement. The existence of a master netting agreement is intended to provide protection to the Group in the event of a counterparty default.

The Group's derivative and foreign exchange activities are predominantly short term in nature. Transactions with maturities over one year principal, represent either fully offs of the long transactions or transaction, the foreign deal graded and quality as tank the constitution for the foreign and actions.

Risk management and capital adequacy report 31" December 2018

7. Off-balance sheet exposure and securitisations (continued)

7.2 Derivative and foreign exchange instruments (continued)

The aggregate notional amounts for derivative and foreign exchange instruments at 31st December 2018 were as follows -

	Trading	Hedging	Total
	US\$ millions	US\$ millions	US\$ millions
Foreign exchange contracts -			
Unmatured spot, forward and futures contracts	14,025 6	-	14,025 6
Options purchased	67 6	-	676
Options written	67 6	-	67 6
	14,160 8	-	14,1608
Interest rate contracts -			
Interest rate swaps	5,570 3	13,618 9	19,189 2
Cross currency swaps	4243	-	4243
Options, caps and floors purchased	1,573 2	-	1,573 2
Options, caps and floors written	1,573 2	-	1,573 2
	9,141 0	13,618 9	22,7599
Equity and commodity contracts:-			
Options and swaps purchased	728		728
Options and swaps written	728	•	728
	145 6	-	145 6
	23,447.4	13,618.9	37,066.3

7.3 Counterparty credit risk

Counterparty credit risk is the risk that a counterparty to a contract in the interest rate, foreign exchange, commodity, equity or credit markets defaults prior to the maturity of the contract. The counterparty credit risk for derivative and foreign exchange instruments is subject to credit limits on the same basis as other credit exposures. Counterparty credit risk arises in both the trading book and the banking book.

a) Counterparty credit risk calculation

For regulatory capital adequacy purposes, GIB uses the current exposure method to calculate the exposure for counterparty credit risk for derivative and foreign exchange instruments in accordance with the credit risk framework in the CBB's Basel 3 capital adequacy framework. A capital charge to cover the risk of mark-to-market losses on expected counterparty risk (CVA) is applied to over-the-counter derivatives. Credit exposure comprises the sum of current exposure (replacement cost) and potential future exposure. The potential future exposure is an estimate which reflects possible changes in the market value of the individual contract during the remaining life of the contract, and is measured as the notional principal amount multiplied by a risk weight. The risk weight depends on the risk categorisation of the contract and the contract's remaining life. Netting of potential future exposures on contracts within the same legally enforceable netting agreement is done as a function of the gross potential future exposure.

The EAD, CVA, RWAs and capital requirements for the counterparty credit risk of derivative and foreign exchange instruments analysed by standard portfolio, is presented in the table below -

Exposure at Default (EAD)						
	Current exposure	Future exposure	Tota! exposure	CVA	RWA	Capital requirement
	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions	US\$ millions
Banks	408 8	89 2	4980	120 2	165 1	20 6
Corporates	209 8	70 8	280 6	20 2	228 6	28 6
Governments	4 9	28	77	0 1	0 4	0 1
	623.5	162.8	786.3	140.5	394.1	49.3

Risk management and capital adequacy report 31" December 2018

7. Off-balance sheet exposure and securitisations (continued)

7.3 Counterparty credit risk (continued)

b) Mitigation of counterparty credit risk exposure

Risk mitigation techniques are widely used to reduce exposure to single counterparties. The most common risk mitigation technique for derivative and foreign exchange-related exposure is the use of master netting agreements, which allow the Group to net positive and negative replacement values of contracts under the agreement in the event of default of the counterparty.

The reduction of counterparty credit risk exposure for derivative and foreign exchange instruments through the use of risk mitigation techniques is demonstrated as follows -

	Current exposure	Effect of netting agreements US\$ millions	Netted current exposure US\$ millions
	US\$ millions	US\$ millions	US\$ millions
Counterparty credit risk exposure	6235	(278 4)	345 1

7.4 Securitisations

Securitisations and demonals of ucture. Micro the cash flow from an incordying problem sposure in ascado recordado logicity ordifferent stratificatinsk positions or transhes reflecting different degrees of credit in skip positions or transhes reflecting different degrees of credit in skip positions or transhes reflecting different degrees of credit in skip positions or the underlying exposures, as opposed to being derived from an obligation of the entity originating those exposures.

At 31 ¹ December 2018, the Group had no exposure to securitisation tranches

The Group provides collateral management services to three collateralised dobt obligations (CDOs) issued between 2002 and 2006. The CDOs are intended to extract relative value from a wide range of asset classes across a broad spectrum of credit ratings. The underlying collateral of the CDOs includes leveraged loans, residential and commercial real estate, consumer finance lengths small and recdium sized enterprises and other microscables early CDO helds of to so indescribe investments.

At 31 'December 2018 the underlying investments in the CDOs for which the Group acted as collateral manager amounted to US\$0.2 billion. At 31. December 2018, GIB did not hold any exposure to CDOs managed by the Group

8. Pillar 2 risks

GIB manages and measures other risk types that are not included under Pillar 1 in the CBB's Baset 3 framework through Internal Capital Adequacy Assessment Process (ICAAP). For this purpose, the Group has adopted a «Pillar 1 plus» approach Pillar 1 capital calculations (for credit, market and operational risk) constitute the minimum capital required by the Group's home regulator, the Central Bank of Bahrain (CBB). In addition to the capital assessment for Pillar 1 risks, the Pillar 2 capital assessment for Pillar 1 risks, the Pillar 2 capital assessment for Pillar 1 risks to the Literature of the Central Bank of the Group's business. This includes an analysis of the Group's liquidity risk, concentration risk, interest rate lisk in the banking book (IRRBB) pension obligation risk, reputation risk, information technology risk and macroeconomic risk.

This section describes GIB's Pillar 2 risks that are not addressed in Pillar 1 of the CBB's Basel 3 framework

Risk management and capital adequacy report 31st December 2018

8. Pillar 2 risks (continued)

8.1 Other risk types

a) Liquidity risk

The Group has established approved limits which restrict the volume of liabilities maturing in the short-term. An independent risk management function monitors the future cash flow maturity profile against approved limits on a daily basis. The cash flows are monitored against imits applying to both daily and cumulative cash flows occurring over a 30 day period. The liquidity limits ensure that the net cash outflows over a 30 day period do not exceed the eligible stock of available liquid resources. The cash flow analysis is also monitored on a weekly basis by the Assets and Liabilities Committee (ALCO).

Customer deposits form a significant part of the Group's funding. The Group places considerable importance on maintaining the stability of both its customer and interbank deposits. The stability of deposits depends on maintaining confidence in the Group's financial strength and financial transparency.

The funding base is enhanced through term financing, amounting to US\$3,338.0 million at 31" December 2018. Access to available but uncommitted short-term funding from the Group's established GCC and international relationships provides additional comfort. In addition to the stable funding base, the Group maintains a stock of liquid and marketable securities that can be readily sold or repoed.

At 31st December 2018, 72.6 per cent of total assets were contracted to mature within one year. With regard to deposits, retention records demonstrate that there is considerable divergence between their contractual and effective maturities.

US\$13,574.0 million or 65.6 per cent of the Group's deposits at 31st December 2018 were from GCC countries. Historical experience has shown that GIB's deposits from counterparties in the GCC region are more stable than deposits derived from the international interbank market. At 31st December 2018, placements and other liquid assets with counterparties in non. GCC countries were greater than the deposits received, demonstrating that the Group is a net lender of funds in the international interbank market.

b) Concentration risk

Concentration risk is the credit risk stemning from not having a well diversified credit portfolio, i.e. the risk inherent in doing business with large customers or being overexposed in particular industries or geographic regions. Concentration risk is captured in GIB's Pillar 2 capital framework through the use of a credit risk portfolio model which considers single name concentrations and sector concentrations in the credit portfolio.

Under the CBB's single obligor regulations, banks incorporated in Bahrain are required to obtain the CBB's approval for any planned exposure to a single counterparty, or group of connected counterparties, exceeding 15 per cent of the regulatory capital base. At 31° December 2018, the following single obligor exposure exceeded 15 per cent of the Group's regulatory capital base (i.e. exceeding US\$351.2 million)

	On-balance sheet exposure US\$ millions	Off-balance sheet exposure US\$ millions	Total exposure US\$ millions
Counterparty A	725 7	-	725 7
Counterparty B	131 9	290 0	4219
Counterparty C	354 4	-	354 4

c) Interest rate risk in the banking book

Structural interest rate risk arises in the Group's core balance sheet as a result of mismatches in the repricing of interest rate scriptive financial assets and habilities. The associated interest rate risk is managed within VaR limits and through the use of models to evaluate the sensitivity of earnings to movements in interest rates.

8. Pillar 2 risks (continued)

8.1 Other risk types (continued)

d) Pension obligation risk

Pension obligation risk is the risk that there may be a shortfall with respect to pension benefits due to employees/former employees within the defined benefit scheme of the Group's wholly owned subsidiary. GIBUK The scheme was closed to new members during 2002. As a result the Group is exposed to the risk that it will need to make further unexpected future contributions to the scheme. The risk can arise from a number of factors including.

- Increased life expectancy increasing the value of future liabilities,
- Falling interest rates increasing the value of the future liabilities,
- Falling equity prices reducing the value of scheme assets,
- Increased salaries for staff still in employment

As part of GIB's ICAAP framework, an adverse scenario is applied to the scheme's assets and liabilities on a level of severity expected no more than once in every 200 years, i.e. a 99.5 per cent or e year confidence level

e) Reputational risk

Reputational risk is the risk of losses resulting from adverse perceptions about the Group, its brand and franchise by its various stakeholders that is caused by a variety of internal and external factors. Preventive measures, including controls and processes have been deployed to manage reputational risk. These include a robust and comprehensive governance structure, which is based on set of well-defined policies and procedures.

The Group has established a reputational risk reporting framework, providing relevant stakeholders with periodic overview on key reputational risks, loss event incidents, status of key risk indicators, and required management action. Training sessions on reputational risks are organised for employees to create awareness among them on reputational risk, encourage them to identify and understand emerging internal and external reputational risks, and guide them on the process to take action in order manage or mitigate their impact.

The Group's operating model has been designed to cater transparency and appropriate disclosures. The Corporate Communications function of the Group has the responsibility to ensure effective communications internally with the employees and externally with the media, shareholders, customers and authorities it is charged with the responsibility of enhancing the image and reputation of the GIB brand through the various activities such as advertising, public relations, sponsorships, and donations

f) Information Technology (IT) risk

Technology continues to play a critical role in the Bank's operations and in the fulfilment of its strategic objectives. The Group has in place a sound IT and Information Security governance framework that aligns its IT strategy and Information & Cyber Security Strategy with its overall business objectives.

The Group has an IT Audit team with the mandate to examine and evaluate the Group's IT infrastructure, policies and procedures and compliance to those policies. The audits determine whether IT controls protect corporate assets, ensure data integrity and are aligned with the business overall objectives. This culminates in an audit plan which is reviewed and approved by the Board Audit committee. Based on the audit findings, exception reports and recommendations are prepared and sent to the relevant unit for prompt response and/or implementation. Follow up meetings are also made to ensure that issues identified are properly resolved and the recommendations made are being implemented.

In addition, the Group has newly created two teams, Information Security Governance and Information Security Compliance, who have the mandate to perform detailed Information & Cyber Security Risk Assessments and Information Security Compliance reviews

g) Macroeconomic risk

Macroeconomic risk relates to the risk of increasing stress levels in the principal economies in which the Group operates. These risks can be triggered by political uncertainties, social unrests, high/low commodity prices, excessive leverage in the financial system or an uncompetitive business environment. Due to the systemic nature of these macroeconomic triggers there will be an adverse impact on the Group's profitability and capital positions and the extent of loss would depend on the severity of the stress event.

Macroeconomic risk is captured in GIB's ICAAP framework through the use of stressed macroeconomic forecast to gauge the impact of potential losses that the Group could incur

Risk management and capital adequacy report 31" December 2018

8. Pillar 2 risks (continued)

8.1 Other risk types (continued)

h\ Legal risk

In the ordinary course of its busiless as a participant in the financial services industry, the Group may pulsue litigation claims against Unidipathes and any also have Higgstion claims and/or regulatory proceedings filed against it. The Bank has an incross legal department comprising of a philidelegal professionals. The department has put in place adequate policies A proceedings and uses as instance of professionals, legal firms or need basis to ensure effective and efficient management of legal risk.

9. Capital adequacy ratios and other issues

9.1 Capital adequacy ratios

The Group's policy is to main aim a strong capital base so as to prescrive investor, credito, and market confidence and to sustain the future development of the business. The impact of the level of capital on shareholders' return is also recognised as well as the need to maintain a balance between the higher returns that might be possible with greater gearing and the advantages are accordy afforded by a sound capital position, the Group manages its capital structure and makes adjustments to the structure taking account of changes in economic conditions and strategic business plans. The capital structure may be adjusted through the dividend payout or the issue of new shares.

The capital adequacy ratios of GIB's principal subsidiary, GIBUK, and the Group were as follows

	GIBUK	Group
Total Divide (I) Ed and I and	1.288 5	16,108 3
Total RWAs (US\$ millions)	-,-	· · · · · · · · · · · · · · · · · · ·
Capital base (US\$ millions)	365 5	2,341 4
Tier 1 capital (US\$ millions)	365 5	2,196 2
Tier 1 ratio (per cent)	28.4	13.6
Total ratio (per cent)	28.4	14.5

GIB aims to maintain a minimum tier 1 ratio in excess of 10.5 per cent and a total capital adequacy ratio in excess of 14.0 per cent

Strategies and methods for maintaining a strong capital adequacy ratio

GIB prepares multi-year strategic projections on a rolling annual basis which include an evaluation of short-term capital requirements and a forecast of longer-term capital resources

The evaluation of the strategic planning projections have historically given rise to capital injections. The capital planning process triggered the raising of additional tier 2 capital through a US\$400 million subordinated debt issue in 2005 to enhance the total regulatory capital adequacy ratio, and a US\$500 million capital increase in March 2007 to provide additional tier 1 capital to support planned medium. term asset growth: A further US\$1.0 billion capital increase took place in December 2007 to enhance capital resources and compensate for the impact of likely provisions relating to exposures impacted by the global credit crisis.

9.2 ICAAP considerations

Pillar 2 in the Basel 3 framework covers two main processes the ICAAP and the supervisory review and evaluation process in CICAAP his tices in code align of the pre-time term is a covered to a general way, entire of a plantage in order to a code, cross the advances in code and appear to the institution. The purpose of the supervisory review and evaluation process is to ensure that institutions have adequate capital to support the risks to which they are exposed and to encourage institutions to develop and apply enhanced risk management techniques in the monitoring and measurement of risk

GIB's regulatory capital base exceeded the CBB's minimum requirement of 12.5 per cent throughout the year ended 31.1 December 2018. Based on the results of capital adequacy stress testing and capital forecasting. GIB considers that the some included support of a minimum requirement of 12.5 per cent throughout the year ended to the some included support of the solution of the solu
