NOTES TO THE FINANCIAL STATEMENTS

for the 52 week period ended 22 August 2009

1 ACCOUNTING POLICIES

Basis of preparation

The financial statements are prepared under the historical cost convention, with the exception of derivative financial instruments which are measured at fair value, and in accordance with applicable accounting standards and Companies (Jersey) Law 1991

In accordance with FRS 18 the directors have continued to review the accounting policies

There have been no changes to accounting policies during the year

Fundamental accounting concept - going concern

The ultimate parent has undertaken to support the company for a period of at least one year following the date of approval of these financial statements. For this reason, the financial statements have been prepared on a going concern basis.

Taxation

Current tax is provided at amounts expected to be paid (or recovered) using the tax rates and laws that have been enacted or substantively enacted at the balance sheet date. Deferred tax is recognised in respect of all timing differences that have originated but not reversed at the balance sheet date, where transactions or events that result in an obligation to pay more tax in the future, or a right to pay less tax in the future have occurred at the balance sheet date.

Convertible bond

On issue, the debt and equity components of convertible bonds are separated and recorded at fair value net of issue costs. The fair value of the debt component is determined using a market rate for an equivalent non-convertible bond. This amount is classified as a liability and measured on an amortised cost basis until extinguished on conversion or maturity of the bonds. The remainder of the proceeds is allocated to the conversion option and is recognised in equity, net of income tax effects. The carrying amount of the equity component is not re-measured in subsequent years.

On early repurchase of the convertible bond, the consideration paid is allocated to the liability and equity components at the date of transaction. The liability component at the date of transaction is determined using a market rate for an equivalent non-convertible bond at the date of the transaction, with the equity component as the residual of the consideration paid and the liability component at the date of transaction. The difference between the consideration paid for the repurchase allocated to the liability component and the carrying amount of the liability at that date is recognised in profit or loss. The amount of consideration paid for the repurchase and transaction costs relating to the equity component is recognised in equity
