GALLEY ENERGY LIMITED

Notes to the Financial Statements

for the Period Ended 31 December 2017

1. Accounting policies

These financial statements have been prepared in accordance with the provisions of Section 1A (Small Entities) of Financial Reporting Standard 102

Turnover policy

Turnover comprises the invoice value of goods supplied by the company, exclusive of trade discounts and value added tax.

Tangible fixed assets and depreciation policy

Property, plant and equipment are stated at cost or at valuation, less accumulated depreciation. Cost includes the asset's purchase price and any other costs directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Borrowing costs directly attributable to the construction of qualifying assets are capitalised as part of the cost of those assets. Property, plant and equipment are stated at cost or at valuation, less accumulated depreciation. The charge to depreciation is calculated to write off the original cost or valuation of property, plant and equipment, less their estimated residual value, over their expected useful lives as follows: Plant and machinery 5% Straight line Assets Under Construction not depreciated Depreciation is only charged from the point that the asset is brought into its intended use by the company. The carrying values of tangible fixed assets are reviewed annually for impairment in periods if events or changes in circumstances indicate the carrying value may not be recoverable.

Other accounting policies

Assets under construction Assets under construction represent the carrying value of assets which are in the development phase or which have reached the planning consent stage and have been approved for construction. Depreciation is not applied to assets under construction and will only commence when the asset is available for use after it has been commissioned for the use for which it was intended. Assets under construction are reviewed for impairment on an ongoing basis. **Impairment review** The viability of any project undertaken is reviewed on an ongoing basis. The carrying amount of the company's assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. If there is evidence of impairment, the recoverable amount of the asset, (being the higher of the fair value less costs to sell and the value in use of the asset), is estimated to determine the extent of any such impairment. **Finance costs** Finance costs consist of interest payable on borrowings calculated using the effective interest rate method. Borrowing costs relating to the acquisition or construction of a qualifying asset are capitalised at the appropriate rate by adding them to the costs of qualifying assets being acquired or constructed. Borrowing costs that are not directly attributable to the acquisition or construction of a qualifying asset are recognised in the profit and loss account using the effective interest method. **Borrowing costs** Borrowing costs relating to the acquisition of assets are capitalised at the appropriate rate by adding them to the cost of assets being acquired. Investment income earned on the temporary investment of specific borrowings pending their expenditure on the assets is deducted from the borrowing costs eligible for capitalisation. All other borrowing costs are recognised in profit or loss in the period in which they are incurred. **Taxation and deferred taxation** Current tax represents the amount expected to be paid or recovered in respect of taxable profits for the year and is calculated using the tax rates and laws that have been enacted or substantially enacted at the Statement of Financial Position date. Deferred tax is recognised in respect of all timing differences that have originated but not reversed at the balance sheet date where transactions or events have occurred at that date that will result in an obligation to pay more tax in the future, or a right to pay less tax in the future. Timing differences are temporary differences between the company's taxable profits and its results as stated in the financial statements. Deferred tax is measured on an undiscounted basis at the tax rates that are anticipated to apply in the periods in which the timing differences are expected to reverse, based on tax rates and laws that have been enacted or substantively enacted by the balance sheet date. **Foreign currencies** The company's financial statements are presented in Sterling which is the company's functional currency. Items included in the financial statements of the company are measured using this functional currency. Transactions in foreign currencies are initially recorded at the functional currency rate prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated at the rates of exchange ruling at the Statement of Financial Position date. Non-monetary items that are measured in terms of historical cost in a foreign currency are translated at the rates of exchange ruling at the date of the transaction. Non-monetary items that are measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value was determined. The resulting exchange differences are dealt with in the Income Statement.
